

Preface	1
---------	---

CO₂ Reduction

<i>A. Kies, F. Dünnebeil, S. Hausberger</i>	Simulation of fuel saving potentials of heavy-duty vehicles with VECTO	3
<i>I. Besselink, J. Pauwelussen, B. Kraaijenhagen</i>	Greening and safety assurance of future modular road vehicles	15
<i>L. Eckstein, B. Mohrmann, R. Hummel, S. Weiland, M. C. F. Donkers, H. Chen, T. C. J. Romijn</i>	Fuel consumption reduction measures for longhaul-trucks in the CO _N VENienT project	27

Antriebs- & Fahrwerkssysteme / Drive Systems & Chassis Systems

<i>H. Kastler, G. Hasenbichler, A. Huss, H. Ofner, H. Schreier, H. Theissl, G. Wagner</i>	Mild hybrid systems for long haul truck applications	43
<i>L. Marquenie, J. H. M. van Rooij</i>	Advances in the development of a novel CVT for medium duty trucks	59
<i>J. van den Oetelaar</i>	CO ₂ reduction by maximum volume transport – Intermodal technology concept, an integrated solution	73

Hochautomatisiertes Fahren/Highly automated driving

<i>M. Kirschbaum</i>	Highly automated driving for commercial vehicles	85
<i>A. C. Semmelroth</i>	Holistic Human Machine Interface for commercial vehicles – expectations, technologies, system architectures	97

Plattform- & Baukastenkonzepte/Platform & Modular Concepts

<i>H. Gawinski, E. Neitzel, H.-F. Ohm</i>	CALS – Continental Air Spring Leveling System – An intelligent solution for modern commercial vehicles – An approach of a decentralized Air Spring Leveling System for commercial vehicles and busses	107
<i>G. Schwarz, M. Sinn, A. Hirsch</i>	Lightweight truck frame with independent front suspension for commercial vehicles	117
<i>J. Wimmer, A. Grossl, K. Gell</i>	New Independent front suspension for commercial vehicles – From the concept to the prototype, modular structure for truck and bus application	127

Connected Vehicle

<i>M. Weber, P. Vranjes</i>	Will Cloud based diagnostics increase vehicle up-time? A short survey of new possibilities which connectivity will provide	139
<i>T. Wolf, T. Dieckmann</i>	Transformation of driver assistance systems – communication in future commercial vehicles	151

Regelsysteme / Control Systems

<i>B. Barrois, U. Heine</i>	Evolution of emergency braking systems for buses	161
<i>C. Müller</i>	ATC – The new generation Articulation Turntable Controller for Mercedes-Benz articulated buses	171
<i>R. Verheijen</i>	New generation steering systems for trailers: Path Following Steering System	183

Van

<i>F. Ragusa, M. Menichelli</i>	Integrated development process applied during the New Daily vehicle suspension development	195
<i>T. Weyh, M. Speckert, A. Opalinski, M. Wagner</i>	Planning a measurement campaign in Eastern Europe using Fraunhofer VMC® („Virtual Measurement Campaign“)	207
<i>N. Waldbuesser, M. Paule, T. Stutte, D. Waeller, J. Zeger, C. Bauer</i>	The Mercedes-Benz Sprinter Van: First diesel-powered SULEV production vehicle	219

Antriebsenergien / Drive Energy

<i>R. Dold, A. Zuschlag, T. Kind, S. Maus</i>	LNG – Future fuel for trucks? Potentials and challenges of a new fuel for heavy duty transport	235
<i>J. Weinzierl, C. Gruber, C. Kohrs</i>	LNG – the “cool” alternative in the fuel portfolio of CVs – Advantages and disadvantages of liquefied natural gas in heavy commercial vehicles	245
<i>H. Kitterer, M. Ruedel</i>	IVECO Stralis LNG – Practical experience with Europe’s first series production Liquefied Natural Gas vehicle – Future developments of natural gas engines for heavy trucks	257
<i>R. Bouwman, P.J.M. Smidt, J.L. Duarte</i>	A conductive fast charged electric bus system for public city transport	269
