Introduction	1
0.1. Why analyze Hod	2
0.2. A crash course on hod mice	6
0.3. The mouse set conjecture	8
0.4. The proof of MSC	8
0.5. The comparison theory of hod mice	10
0.6. Hod is a hod premouse	11
Chapter 1. Hod mice	15
1.1. Hybrid $\mathcal{J}$ -structures	15
1.2. Some fine structure	17
1.3. Iteration trees and iteration strategies	19
1.4. Layered strategy premice	22
1.5. Iterations of $\Sigma$ -mice	23
1.6. Hull condensation	25
1.7. Hod mice	29
Chapter 2. Comparison theory of hod mice	35
2.1. Hod pair constructions	35
2.2. Iterability of hod pair constructions	38
2.3. Universality of the fully backgrounded constructions	40
2.4. Coarse $\Gamma$ -Woodin mice	44
2.5. Comparison under $AD^+$	47
2.6. Positional and commuting iteration strategies	52
2.7. The diamond comparison argument	60
Chapter 3. Hod mice revisited	71
3.1. The internal theory of hod premice	71
3.2. OD-full pointclasses	79
3.3. The derived models of hod mice	82
3.4. An anomaly	86
3.5. Getting branch condensation	91
3.6. Generic comparisons	95
3.7. Reorganizing hod mice	99
3.8. $S$ -constructions	100
Chapter 4. Analysis of HOD	105
4.1. Suitability	105
4.2. $B$ -iterability	110
4.3. The direct limit of iterates of hod mice	111

4.4. The computation of Hod	113
Chapter 5. Hod pair constructions	119
5.1. Stacking mice	119
5.2. Clause 4	123
5.3. Fullness preservation	125
5.4. The comparison argument revisited	126
5.5. Branch condensation	127
5.6. $\Gamma(\mathcal{P}, \Sigma)$ when $\lambda^{\mathcal{P}}$ is successor	129
5.7. $B$ -iterability	134
5.8. Strongly $\vec{B}$ -guided strategies	136
5.9. Summary	137
Chapter 6. A proof of the mouse set conjecture	141
6.1. The generation of the mouse full pointclasses	141
6.2. An analysis of stacks	144
6.3. Capturing of hod pairs	146
6.4. The mouse set conjecture	155
6.5. A last word	159
Appendix A. Descriptive set theory primer	161
A.1. Pointclasses	161
A.2. $Env(\Gamma)$	163
A.3. $AD^+$	163
A.4. The derived model theorem	165
Bibliography	167
Index	171
