

# Contents

<b>Preface</b>	xi
<b>0   Introduction</b>	1
Calculus and the Computer 1    Generalities about Digital Computers 2 Time Sharing and Conversational Computing [C] 4    A Brief Glossary 4	
<b>1   Compound Interest: First Steps in Programming</b>	6
How Does Your Money Grow? 6    How Long Does it Take to Double Your Money? 7    What to Do if You are Bored [O] 9	
<b>2   Getting Your Hands on the Computer [L]</b>	10
Preliminaries [C] 10    Terminal Session, Part I [C] 11    Terminal Session, Part II [C] 12    Batch-process Laboratory Session 13    Postscript 14	
<b>3   Algorithms: An Etymological Interlude [R]</b>	15
<b>4   Rabbits, Roots, Sines, Sums, Taxis: Second Steps in Programming</b>	17
Tabulation of the Sine Function 17    Some Sums 18    Rabbit's Friends and Relations 19    Babylonian Square Roots 21    Hardy's Taxi 22 What to Do if You are Bored [O] 23	
<b>5   Running Your Own Program [L]</b>	24
Extermination of Bugs 24    Producing a Sine Table 27    Sums of Reciprocals 28    Fibonacci Numbers 28    Square Roots 29    Sums of Cubes 30	
<b>6   Functions and Graphs [L]</b>	30
Function Definition 30    Tabulation of Functions 32    A Picture is Worth a Thousand Numbers [C] 33    Some Pictures Are Worthless [C], [O] 34	
<b>7   Infinite Lists of Numbers</b>	35
Why We Need This Chapter 35    Sequences 35    Limits 37	
<b>8   Powers and Factorials [L]</b>	40
Sequences of Powers 41    Can You Cross the Room? 41    Powers versus Factorials 42	

<b>9   Useful Facts About Sequences [O]</b>	<b>43</b>
<b>10   Sequences and Derivatives [L]</b>	<b>48</b>
How (Not) to Compute Derivatives 48	Some Mildly Surprising Limits 49
<b>11   Applications of Limit Theorems [O]</b>	<b>51</b>
Case Study: Sequences of Powers (Geometric Progressions) 51	Case Study: Sums of Geometric Progressions 52
Case Study: Limits of Functions 53	Case Study: Babylonian Square Roots 54
<b>12   An Historical Piece of Pi [R]</b>	<b>56</b>
<b>13   How Did Archimedes Do It?</b>	<b>62</b>
<b>14   A Computational Piece of Pi [L]</b>	<b>66</b>
<b>15   Digging for Roots</b>	<b>67</b>
<b>16   Let's Compute Roots [L]</b>	<b>70</b>
<b>17   The Intermediate Value Theorem [O]</b>	<b>72</b>
<b>18   Under the Apple Tree, or How Isaac Newton Looked for Roots</b>	<b>74</b>
Historical Background [R] 74	Description of the Method 76
Does It Work? [O] 79	Cube Roots [O] 80
<b>19   Solving Equations, Old and New [L]</b>	<b>81</b>
<b>20   Why Does Newton's Method Work So Well? [O]</b>	<b>84</b>
<b>21   Calculus for Fun and Profit</b>	<b>85</b>
<b>22   Computing Extreme Values [L]</b>	<b>89</b>
<b>23   Tying Up Some Loose Ends [O]</b>	<b>91</b>
Existence of Extreme Values 91	Why Does the Algorithm Work? 92
How Well Does it Work? 93	
<b>24   Up the Up Staircase, or First Steps in Integration</b>	<b>97</b>
Historical Background [R] 97	Upper and Lower Sums 98
Integrals of Monotone Functions 100	

25	<b>Integral Evaluations [L]</b>	102
26	<b>Trapezoids: Second Steps in Integration</b>	103
	The Trapezoidal Rule 103    The Midpoint Rule 105    Integrals of Concave Functions 106	
27	<b>Integrals of Concave Functions [L]</b>	109
28	<b>How Good is the Trapezoidal Rule? [O]</b>	110
29	<b>Parabolas: Third Steps in Integration</b>	117
	A Quick Look Backward [R] 117    A Quadratic Approximation 118 Simpson's Rule 119    Using the Error Estimate [O] 122	
30	<b>Integrals via Simpson's Rule [L]</b>	124
31	<b>How Good is Simpson's Rule? [O]</b>	125
32	<b>How to Differentiate, and How Not To</b>	128
	Historical Note [R] 128    What's Wrong with Calculus Techniques? 129 A Quadratic Approximation 130    How Good is the Approximation? [O] 132	
33	<b>Let's Differentiate [L]</b>	134
34	<b>How to Really Differentiate</b>	136
	A Quartic Approximation 136    Getting the Right Spacing 137    Higher Derivatives [O] 139	
35	<b>Let's Really Differentiate [L]</b>	140
36	<b>Error Analysis via Rolle's Theorem and Legerdemain [O]</b>	141
37	<b>A Do-it-yourself Kit for Sines and Cosines</b>	143
	Approximations by Polynomials 143    Where Does it All Stop? 146 Sines of Large Numbers [O] 148    Preview of Coming Attractions [R] 150    Historical Note [R] 150    Etymological Note [R] 151	
38	<b>Using the Kit [L]</b>	152

<b>39   The Arctangent Function and <math>\pi</math></b>	153
An Algorithm 153    Computation of $\pi$ 155    A Better Algorithm [O] 156	
<b>40   Computing <math>\pi</math> the Modern Way (ca. A.D. 1700) [L]</b>	157
<b>41   Historical Note on Natural Logarithms [R]</b>	158
<b>42   The Natural Logarithm Function</b>	161
<b>43   Let's Compute Logarithms [L]</b>	164
<b>44   Power Series: A Look Ahead and a Look Backward [R]</b>	165
<b>45   A Consumer's Guide to Compound Interest</b>	167
Frequent Compounding 167    Continuous Compounding 168    Poly- nomial Approximation to the Exponential Function [O] 170	...
<b>46   Effective Interest Rates and <math>e^x</math> [L]</b>	172
<b>47   Is More Frequent Compounding Better? [O]</b>	173
<b>48   Population Dynamics: An Introduction to Differential Equations</b>	176
Simple Differential Equations 176    Birth-Death Models 178    Numerical Solutions 179    Analytic solutions [O] 182	
<b>49   Predicting Populations [L]</b>	185
<b>50   More on Population Dynamics: Predators and Prey</b>	188
Foxes and Rabbits 188    Analysis of the Model 189    Trajectories 190	
<b>51   Can Rabbits Live with Foxes? [L], [C]</b>	192
<b>52   Positive-term Series and the Integral Test</b>	195
An Improvement on the Integral Test 195    Example: $p$ -Series 197 Example: The Alternating Harmonic Series [O] 198	
<b>53   Let's Compute <math>p</math>-Series [L]</b>	199
<b>54   The Ups and Downs of Alternating Series</b>	200

<b>55   Let's Evaluate Alternating Series [L]</b>	202
<b>56   When Ratios Decrease to a Limit Less than One</b>	203
The Ratio Test 203    An Algorithm 204    Application: $e^x$ 206    The Root Test [O] 206	
<b>57   More Series Evaluations [L]</b>	207
<b>58   Projects to Do on Your Own</b>	208
Classical Formulas for $\pi$ 208    The Method of False Position 209	
Horner's Method 210    The Method of Successive Approximations 211	
Least Squares 213    Antiderivatives 214    On Beyond Simpson 215	
On Beyond Quartics 216    The Runge-Kutta Method 216	
Epidemics 218	
<b>Appendix A Programming in FORTRAN</b>	220
<b>Appendix B Programming in BASIC</b>	230
<b>Appendix C Programming in PL/I</b>	239
<b>Bibliography</b>	248
<b>Index</b>	257
