

CONTENTS

Preface	iii
1. BASIC FORMULAS	
I. DEFINITIONS OF THE GAMMA DENSITY	1
A. Statistical	1
B. Particular Case of the Normal	2
C. Relation to Goodness of Fit	3
D. Application	3
II. MOMENTS	4
A. Moment Generating Function	4
B. Recurrence for Moments	4
C. Approach to Normality	5
D. A Cube-Root Transformation	6
III. THE INCOMPLETE GAMMA FUNCTION	7
A. Definition	7
B. Series for $\gamma(a, x)$ and $\Gamma(a, x)$	8
C. Link with Stieltjes Transform	8
IV. THE PROBABILITY INTEGRALS	9
A. Stieltjes Continued Fractions	9
B. Continued Fraction of Schlomilch	10
C. Gauss Continued Fraction	11
D. Remarks on Computation	12
E. Computation of the Lower Tail	13
F. Computation of the Upper Tail	16
V. THE INVERSE PROBABILITY INTEGRAL	17
A. Lower Tail Probability Deviate	18

B.	Upper Tail Probability Deviate	19
1.	Approximate Formula Derived from a Cornish-Fisher Expansion	19
2.	Upper Tail Deviate Using c.f. at (1.20b)	20
3.	Approximate Percentage Points for The Pearson Family Using The Skewness and Kurtosis Parameters	22
VI.	THE STATISTIC $y = \ln \left(\frac{\text{Arithmetic Mean}}{\text{Geometric Mean}} \right)$	24
VII.	FORMULA FOR THE POLYGAMMA FUNCTIONS	26
A.	Convergence	27
B.	Polygamma Functions	29
C.	Inequalities	31
D.	Computing the Polygamma Functions	31
VIII.	FURTHER EXAMPLES	33
2.	MAXIMUM LIKELIHOOD ESTIMATORS FOR THE TWO PARAMETER GAMMA DISTRIBUTION	
I.	INTRODUCTION	45
II.	EXPANSION FOR $\hat{\rho}$	46
III.	OBJECTIVES	47
IV.	OPTIONS	47
V.	A SIMPLE APPROXIMATION TO THE DISTRIBUTION OF $\hat{\rho}$	48
VI.	MOMENTS OF y	49
A.	Illustration	50
B.	Pearson-Tukey Approximations to Mean and Variance	52
VII.	SERIES IN DESCENDING POWERS OF n FOR THE MOMENTS OF $\hat{\rho}$, THE SHAPE PARAMETER	53
A.	The Bivariate Moments $\mu_{r,s}$	54
B.	The Bivariate Derivatives	55
C.	Order of Magnitude	57
D.	An Illustration	57

E.	Terms in the First Four Moments of $\hat{\rho}$	59
F.	Illustrations and Further Comments	61
G.	General Comments on the $\hat{\rho}$ Series in Descending Powers of n	63
H.	Usage	63
VIII.	SERIES IN DESCENDING POWERS OF n FOR THE MOMENTS OF \hat{a}	69
IX.	RANGE OF THE COEFFICIENTS IN THE MOMENT SERIES FOR $\hat{\rho}, \hat{a}$	76
X.	MOMENTS OF $\hat{\rho}$ AND \hat{a} USING THE APPROXIMATE DENSITY OF y AND GRAM-CHARLIER SERIES	77
A.	The Orthogonal Polynomial Coefficients (k_s)	78
B.	Moments of $\hat{\rho}$ and \hat{a}	79
XI.	MOMENTS OF $\hat{\rho}$ AND \hat{a} USING EXPANSIONS IN DESCENDING POWERS OF ρ	80
A.	Recurrence for $E(y^{-s})$	81
B.	Expressions for $E(y^s), s = 1, 2, \dots$	82
C.	First Four Moments of $\hat{\rho}$ the Shape Parameter Estimator in Descending Powers of ρ	84
D.	First Four Moments of the Scale Parameter Estimator \hat{a} in Descending Powers of ρ	85
XII.	COMPARISONS OF ASSESSMENTS FOR THE MOMENTS OF $\hat{\rho}$ AND \hat{a} BY DESCENDING POWERS OF n AND ρ	86
XIII.	TABULATIONS OF THE FIRST FOUR MOMENT PARAMETERS OF \hat{a} AND $\hat{\rho}$	87
A.	The $\hat{\rho}$ Series	87
B.	The \hat{a} Series	89
XIV.	APPLICATIONS	89
A.	Storm Data	89
B.	Asian Monsoon Data	90
C.	Another Application	92
XV.	THE PARAMETRIC FORM (ρ, c) WHERE $c = 1/a$	93
XVI.	UNBIASED ESTIMATORS	93
XVII.	FIRST AND SECOND ORDER COVARIANCES FOR LARGE SAMPLES	95

XVIII. JOINT ACCEPTANCE REGION FOR $\hat{\alpha}, \hat{\rho}$ USING JOHNSON'S TRANSLATION SYSTEM OF DISTRIBUTIONS	95
3. APPROXIMATE DISTRIBUTION OF PERCENTAGE POINTS	
I. INTRODUCTION	100
II. THE W-H APPROXIMATION	100
III. MOMENTS OF THE MEAN m'_1	101
IV. MOMENTS OF $T_\alpha(\hat{\rho})$	102
A. Acceptance Parameter Space	104
V. ILLUSTRATION	107
A. The W-H Method and Five Probability Levels	108
B. A Precipitation Data Example	109
VI. AN EXPANSION FOR \hat{X}_α	111
A. Linked Expressions for F_s	112
B. Third and Fourth Derivatives	113
C. A General Approach	114
VII. THE INTEGRAL METHOD AND THE W-H METHOD	116
VIII. FURTHER COMMENTS	117
IX. FURTHER EXAMPLES	121
4. SIMULATION AND ESTIMATION PROBLEMS ASSOCIATED WITH THE 3-PARAMETER GAMMA DENSITY	
I. INTRODUCTION	127
II. BASIC MAXIMUM LIKELIHOOD (mle, mmle)	127
III. BASIC MOMENT ESTIMATORS (moe)	129
IV. MAXIMUM LIKELIHOOD SOLUTIONS	130
A. Equations	130
B. Algorithm Choice	131
C. When Do Solutions Exist?	132
D. Lam's Program	133

<i>Contents</i>	xiii
V. CYCLE LENGTH FOR SIMULATIONS	135
VI. THE TRANSFORMATION $g(\rho) = \ln(\rho) - \psi(\rho)$ FOR THE ml AND mml ESTIMATORS OF (ρ)	137
A. Simulation Stability	137
B. Stability of Percentage Points of $\hat{\rho}$ Using $g(\hat{\rho})$, \hat{a} , and \hat{s}	138
VII. PERCENTAGE POINTS OF $\hat{\rho}$ AND $\tilde{\rho}$	139
VIII. COHEN AND WHITTEN'S MODIFIED MAXIMUM LIKELIHOOD ESTIMATORS	141
IX. TABULATIONS OF MOMENTS RELATING TO s , a , AND ρ ..	143
X. CONCLUDING REMARKS	153
XI. APPENDIX	
4A.1 EXISTENCE OF MOMENT ESTIMATOR MOMENTS	154
4A.2 MAXIMUM LIKELIHOOD ESTIMATION	155
5. THE DISTRIBUTIONS OF THE STANDARD DEVIATION, SKEWNESS AND KURTOSIS IN RANDOM SAMPLES FROM A GAMMA DENSITY	
I. INTRODUCTION	160
II. HISTORICAL	160
A. The Semi-Invariant Approach	161
III. NUMERICAL STUDIES OF THE STANDARD DEVIATION	163
A. Egon Pearson's Contribution	163
B. The Question of Divergency	163
C. Early Views on Divergency	163
D. Terms in the First and Third Moments of $s^*(n)$	166
E. Computer Oriented Extended Taylor Series for Moments	167
F. Algebraic Expansions from the Extended Series	168
G. Characteristics of Moment Series for the Standard Deviation $s^*(n)$	171
H. A Check for Terms in the Moment Series for the Variance and Fourth Moment of $s^*(n)$	172
I. Simple Approximations to the Four Moments of $s^*(n)$	173
J. A Brief Description of Summation Algorithms Used	174
K. Further Comparisons for the Four Moments of $s^*(n)$	176

B.	A Remainder Formula	207
C.	Setting up the Continued Fraction from the Series	208
D.	Examples	209
E.	The Ladder Form	210
F.	Even and Odd Parts of $R(z)$	211
G.	Equivalence Transformations	211
V.	STIELTJES AND THE MOMENT PROBLEM	212
VI.	APPROXIMATE RATE OF CONVERGENCE OF CONTINUED FRACTIONS	214
VII.	CARLEMAN'S CRITERION FOR THE STIELTJES MOMENT PROBLEM	219
VIII.	PRACTICAL DIFFICULTIES	220
APPENDIX B ALTERNATIVE SUMMATION ALGORITHMS: LEVIN AND MODIFIED BOREL		
I.	SHANKS' NONLINEAR TRANSFORMATION	221
II.	LEVIN'S ALGORITHM	222
III.	MODIFIED BOREL ALGORITHMS	229
APPENDIX C MISCELLANEOUS FORMULAS		
I.	BERNOULLI NUMBERS	230
A.	Numbers	230
B.	Bernoulli Number Bounds	230
C.	List of Bernoulli Numbers	231
II.	PEARSON DISTRIBUTION	231
A.	Moments	231
B.	Asymptotic Covariances of the Skewness and Kurtosis ($n \rightarrow \infty$)	232
III.	EXAMPLES	232
IV.	EQUALITIES	237
A.	Equalities Relating to $\sqrt{(m_2/\mu_2)}$	237
B.	Inequalities for $E\sqrt{(m_2/\mu_2)}$	237
C.	Bounds for the Mean of the Standard Deviation	238
D.	Bounds for the s.d. Under Normality	238

V. FORMULAS FOR THE SAMPLING MOMENTS	239
VI. COMPUTER PROGRAMS	247
A. Polygamma Functions	247
B. Computation of M.L. Estimator of ρ	249
BIBLIOGRAPHY	250
NOMENCLATURE	261
INDEX	265
