Introduction <i>Alexei Tsvelik</i>	ix
List of Figures	xi
List of Tables	xvii
Part I Quantum Critical Points	
1	
Damping of collective modes and quasiparticles in d -wave superconductors <i>Subir Sachdev and Matthias Vojta</i>	3
1. Introduction	3
2. Impurities and the $S = 1$ resonant collective mode	7
3. Inelastic damping of the nodal quasiparticles	12
References	18
Part II Strongly Correlated One-Dimensional Systems	
2	
Dynamical Properties of one dimensional Mott Insulators <i>Davide Controzzi, Fabian H.L. Essler and Alexei M. Tsvelik</i>	25
1. 1D Mott insulators	25
2. The Sine-Gordon model	28
3. Spectral representation of the optical conductivity	31
4. Vicinity of the Luther-Emery point	36
5. Large energy behavior	37
6. Applications	41
References	43
3	
Lectures on Non Perturbative Field Theory and Quantum Impurity Problems: Part II <i>H. Saleur</i>	47
1. Introduction	47
2. Some generalities on form-factors	48

3. Example: The sinh-Gordon model	55
4. The sine-Gordon Model	63
5. Conductance in the fractional quantum Hall effect	67
6. Anisotropic Kondo model and dissipative quantum mechanics	72
7. Friedel oscillations: correlations involving Vertex operators	79
8. Conclusion	85
References	86
4	
Ising-model Description of Quantum Critical Points in 1D Electron and Spin Systems	89
<i>A.A. Nersesyan</i>	
1. Introduction	89
2. The model and its quasi-classical analysis	91
3. Relation between DSG model and deformed quantum Ashkin-Teller model	92
4. Deformed quantum Ashkin-Teller model in the (σ, τ) representation and the Ising transition	97
5. Correlation functions	100
6. Dimerized Heisenberg chain in a staggered magnetic field	103
7. Ising transition in the 1D Hubbard model with alternating chemical potential	107
8. Conclusions	114
References	115
5	
Commensurability, topology and Luttinger's theorem in quantum many-body systems	117
<i>Masaki Oshikawa</i>	
1. Introduction	117
2. Magnetization process of quantum spin system	119
3. One dimension – field theory	123
4. One dimension – Lieb-Schultz-Mattis argument	126
5. A route to Luttinger's theorem	129
6. Going up to higher dimensions	132
7. Conclusion	135
References	136
Part III Strong Correlations and Disorder	
6	
Critical points two-dimensional replica sigma models	141
<i>Paul Fendley</i>	
1. Perturbative peculiarities	148
2. WZW term	149

	vii
3. θ term	152
References	159
7	
Topics in the conformal field theory of disordered systems	163
<i>John Cardy</i>	
1. Logarithmic factors in correlation functions	163
2. Percolation cluster numbers and the spin quantum Hall transition	167
References	170
8	
Disordered Dirac Fermions: Three Different Approaches	173
<i>M.J. Bhaseen, J.-S. Caux, I.I. Kogan and A.M. Tvelik</i>	
1. Introduction	173
2. Massless Dirac Electrons in a Random Gauge Potential (DRGP model)	175
3. The $Osp(2 2)$ WZNW model	183
4. Conductivity	190
5. The tale of two limits	192
6. Conclusion	195
7. Appendixes	196
References	201
9	
Disordered Quantum Solids	205
<i>T. Giamarchi and E. Orignac</i>	
1. Introduction	205
2. Disordered interacting Fermions	207
3. Tackling the disorder	209
4. Other systems and RG	217
5. A zest of numerics	219
6. Variational Method	221
7. Commensurate systems	240
8. Conclusions	249
References	250
 Part IV Dynamical Mean Field Theory	
10	
Model Hamiltonians and First Principles Electronic Structure Calculations	259
<i>G. Kotliar and S.Y. Savrasov</i>	
1. Introduction	259
2. Cellular DMFT	261
3. Qualitative Insights from DMFT applied to model Hamiltonians	265

4. Density Functional Theory and LDA	272
5. LDA+U Method	276
6. Model Hamiltonians and First Principles Calculations	281
7. Dynamical mean-field theory	285
8. LDA+DMFT	289
9. Techniques for solving realistic DMFT equations	293
10. Successes	293
11. Connection with Landau functional	294
12. Extended DMFT, GW and GWU	295
13. Outlook	297
References	298
