

TABLE OF CONTENTS

Preface	v
I. PROBABILITY AND INDUCTION	
I.1. Introduction	1
I.2. Arguments	1
I.3. Logic	4
I.4. Inductive versus deductive logic	6
I.5. The general and the specific	13
I.6. Epistemic probability	15
I.7. Probability and the problems of inductive logic	18
II. THE TRADITIONAL PROBLEM OF INDUCTION	
II.1. Introduction	22
II.2. Hume's argument	22
II.3. The inductive justification of induction	28
II.4. The pragmatic justification of induction	37
II.5. An attempted dissolution of the traditional problem of induction	43
II.6. Summary	51
III. THE GOODMAN PARADOX AND THE NEW RIDDLE OF INDUCTION	
III.1. Introduction	52
III.2. Regularities and projection	53
III.3. The Goodman paradox	57

III.4. The Goodman paradox, regularity, and the principle of the uniformity of nature	61
III.5. Summary	68
IV. BUILDING BLOCKS OF INDUCTIVE LOGIC	
IV.1. Introduction	70
IV.2. The structure of simple statements	71
IV.3. The structure of complex statements	72
IV.4. Simple and complex properties	78
IV.5. Causality and necessary and sufficient conditions	80
IV.6. Mill's methods	84
IV.7. The direct method of agreement	84
IV.8. The inverse method of agreement	90
IV.9. The method of difference	97
IV.10. The combined methods	102
IV.11. The application of Mill's methods	106
IV.12. Probability: arguments, statements, and properties	110
IV.13. Disjunction and negation rules	113
IV.14. Conjunction rules and conditional probability	118
IV.15. Expected value of a gamble	128
IV.16. Rational decision making and probability as a guide to life	131
IV.17. Bayes' theorem	134
IV.18. The probability calculus and inductive logic	137
Appendix to Chapter IV: SAMPLING AND STATISTICS	
A.1. Introduction	141
A.2. Descriptive statistics	142
A.3. Sampling and projective statistics	144
V. INTERPRETATIONS OF THE PROBABILITY CALCULUS	
V.1. Introduction	149
V.2. Descriptive and inductive probability	150
V.3. The logical interpretation of probability	154
V.4. Induction and the frequency interpretation	158
Suggestions for further study	162
Index	163
