

# CONTENTS

I. PRECURSORS OF TENSE-LOGIC	
1. McTaggart's A series (past, present, future) and B series (earlier, later)	1
2. McTaggart's argument against the reality of the A series	4
3. Broad's criticism of McTaggart; temporal predicates and tenses	7
4. Findlay's tense-logical laws	8
5. Smart's argument that events do not change	10
6. Reichenbach on the time of speech and the time of reference; the nature of presentness	12
7. Time and truth in ancient and medieval logic	15
8. Symbolism and metaphysics	17
II. THE SEARCH FOR THE DIODOREAN MODAL SYSTEM	20
1. The tense-logical basis of Diodorean modal logic	20
2. A matrix for Diodorean modality	22
3. Modal systems between $S_4$ and $S_5$	23
4. Kripke's 'branching time' matrix for $S_4$ , and Lemmon's for $S_{4.2}$	27
5. Dummett's formula in D but not $S_{4.3}$ , and its assumption of discreteness	29
III. THE TOPOLOGY OF TIME	32
1. Analysis of the Master-argument of Diodorus	32
2. Some early postulates for past and future	34
3. Corresponding postulates in the logic of the B series	38
4. $U$ -calculi and modal logics	42
5. Hamblin's 15-tenses theorem and its basis	45
6. Cocchiarella's tense-logic, and differences between linear and branching time	50
7. Further simplifications by Scott and Lemmon	55
8. Correction of Hume on past and future	57

IV. NON-STANDARD TENSE-LOGICS	59
1. Theses which assume that time is either discrete or circular	59
2. Postulates for circular time	63
3. Postulates for the next and the last moment, in discrete time	66
4. The logic of 'and then'	70
5. Mere denseness and Dedekindian continuity	71
6. Postulates for beginning and ending time	72
7. Tense-logic as giving the cash-value of assertions about time	74
V. THE LOGIC OF SUCCESSIVE WORLD-STATES	77
1. The de-trivializing of modality: 'the world'	77
2. Instantaneous world-states	79
3. The logic of 'worlds' and Laplacean determinism	82
4. Non-repetition, repetition, and world-state-hood	82
5. The definition of tenses in terms of Diodorean modalities	85
6. Development of the <i>U</i> -calculus within the theory of world-states	88
7. 'States' consisting of combinations of Hamblin tenses	92
VI. METRIC TENSE-LOGIC	95
1. The syntax of intervals	95
2. Postulates for metric tense-logic	97
3. Interaction of the A series and the B series	101
4. The logic of dates	103
5. Metric circular time	105
6. Enlargement of tense-logic to make metric concepts definable	106
7. Geach's definitions of Kamp's constants	111
VII. TIME AND DETERMINISM	113
1. Arguments for the incompatibility of foreknowledge (and fore-truth) and indeterminism	113
2. Formalization of these arguments	117
3. The classical answers to these arguments	121

CONTENTS

	ix
4. Formalization of the Ockhamist answer	122
5. Ultimately converging time	127
6. Formalization of the Peircean answer, and comparison with the Ockhamist	128
7. The Peircean senses of 'will'	132
8. Propositions that are neither true nor false	135
 VIII. TIME AND EXISTENCE	 137
1. Modalized and tensed predicate logic: the standard systems	137
2. Ancient, medieval, and modern objections to coming to be, being brought into being, and being prevented from being	138
3. Ampliation	143
4. Objections to standard modal logic suggested by Myhill, Ramsey, and Chrysippus	145
5. Moore on what might not have existed, and on what once did not exist	149
6. Arguments against some common principles of modal and tense-logic	151
7. The modal system $Q$ , its modifications, and its adaptation to tense-logic	154
8. Tensed predicate logic with now-empty names, in Cocchiarella, Rescher, and Hamblin	158
9. Tensed ontology	162
10. Internal and external complexity in systems with free individual variables	167
11. The difficulties of doing without non-existents	169
12. The admission of past existents but not future ones	171
13. Summary of possible positions	172
 APPENDIX A. POSTULATES FOR MODAL LOGIC, TENSE-LOGIC, AND $U$ -CALCULI	 175
1. Gödel-Feys systems	175
2. Von Wright's systems	175
3. Systems between T and S <sub>5</sub>	175
4. The minimal tense-logic $K_t$	176
5. Standard enlargements of the minimal system	176

6. Systems for circular time	178
7. Systems for the next moment (T) and the last moment (Y)	178
8. Basic U-T postulates	179
9. Correspondences between <i>U</i> -calculi, modal logics, and tense-logics	179
APPENDIX B. MISCELLANEOUS FURTHER DEVELOPMENTS	
1. Von Wright's 'and next' and 'and then' calculi; 'and next' and metric tense-logic	182
2. Minimal one-way tense-logic	187
3. On the range of world-variables, and the interpretation of <i>U</i> -calculi in world-calculi	187
4. The uniqueness of the time-series	198
5. The tense-logical discrimination of special from general relativity	203
6. Alternative axioms for non-branching	205
7. Tenses defined in terms of Diodorean modalities	207
8. Independence proofs for $K_t$	210
9. Anticipations of later developments in Łoś's calculus of instants	212
