

# Contents

Preface	vii
Chapter 1. Introduction	1
Chapter 2. Preliminaries	9
2.1. Notation	9
2.2. Weil-Deligne representations	9
2.3. Iwahori-spherical representations	11
2.4. Crystalline periods	15
Chapter 3. Local-global compatibility for Hilbert Modular Forms	21
3.1. Cohomological weight	21
3.2. Non-cohomological weight	27
Chapter 4. Local-global compatibility results via crystalline periods	39
4.1. Galois representations	39
4.2. Eigenvariety preliminaries	42
4.3. The key lemma	45
Chapter 5. Local semi-simplifications: The case of general linear groups	55
5.1. Results in dimension at most 4	55
5.2. Results in arbitrary dimension	59
Chapter 6. Local semi-simplifications: The case of symplectic groups	63
Chapter 7. Congruences	69
7.1. Potential level-lowering and residual local-global compatibility	69
Chapter 8. Local monodromy operators: The case of general linear groups	79
8.1. Monodromy operators	79
8.2. Applications	83
Chapter 9. Local monodromy operators: The case of symplectic groups	87
9.1. $\gamma$ -factor arguments	87
9.2. Monodromy Operators	93
Bibliography	97
Index	101
