Preface to the First Edition xi

Preface to the Second Edition xv

Preface to the Third Edition xvii

Chapter 1 **Setting the Scene** 1

The relational model is much misunderstood 1
Some remarks on terminology 3
Principles not products 4
A review of the original model 6
Model vs. implementation 14
Properties of relations 18
Base vs. derived relations 22
Relations vs. relvars 24
Values vs. variables 27
Concluding remarks 28
Exercises 29
Answers 31

Chapter 2 **Types and Domains** 41

Types and relations 41
Equality comparisons 43
Data value atomicity 48
What's a type? 52
Scalar vs. nonscalar types 56
Scalar types in SQL 59
Type checking and coercion in SQL 61
Collations in SQL 63
Row and table types in SQL 65
Concluding remarks 67
Exercises 68
Answers 71

Chapter 3 Tuples and Relations, Rows and Tables 81

What's a tuple? 81
Rows in SQL 86
What's a relation? 88
Relations and their bodies 90
Relations are n -dimensional 92
Relational comparisons 92
TABLE_DUM and TABLE_DEE 94
Tables in SQL 95
Column naming in SQL 97
Concluding remarks 100
Exercises 100
Answers 102

Chapter 4 No Duplicates, No Nulls 111

What's wrong with duplicates? 111
Duplicates: further issues 116
Avoiding duplicates in SQL 118
What's wrong with nulls? 120
Avoiding nulls in SQL 124
A remark on outer join 126
Concluding remarks 127
Exercises 128
Answers 133

Chapter 5 Base Relvars, Base Tables 141

Updating is set level 142
Relational assignment 145
More on candidate keys 149
More on foreign keys 152
Relvars and predicates 156
Relations vs. types 158
Exercises 161
Answers 164

Chapter 6 SQL and Relational Algebra I: The Original Operators 173

- Some preliminaries 173
- More on closure 177
- Restriction 180
- Projection 181
- Join 182
- Union, intersection, and difference 187
- Which operators are primitive? 191
- Formulating expressions one step at a time 191
- What do relational expressions mean? 193
- Evaluating SQL table expressions 194
- Expression transformation 196
- The reliance on attribute names 199
- Exercises 201
- Answers 205

Chapter 7 SQL and Relational Algebra II: Additional Operators 217

- Exclusive union 218
- Semijoin and semidifference 219
- Extend 220
- Image relations 223
- Divide 227
- Aggregate operators 228
- Image relations revisited 235
- Summarization 237
- Summarization revisited 243
- Group, ungroup, and relation valued attributes 245
- “What if” queries 252
- A note on recursion 254
- What about ORDER BY? 259
- Exercises 260
- Answers 264

Chapter 8 SQL and Constraints 281

- Type constraints 282
- Type constraints in SQL 286
- Database constraints 287
- Database constraints in SQL 293

Transactions	295
Why database constraint checking must be immediate	296
But doesn't some checking have to be deferred?	299
Constraints and predicates	301
Miscellaneous issues	304
Exercises	306
Answers	310

Chapter 9 SQL and Views 323

Views are relvars	324
Views and predicates	328
Retrieval operations	329
Views and constraints	331
Update operations	336
What are views for?	349
Views and snapshots	350
Exercises	351
Answers	354

Chapter 10 SQL and Logic 363

Why do we need logic?	364
Simple and compound propositions	365
Simple and compound predicates	372
Quantification	374
Relational calculus	379
More on quantification	387
Some equivalences	394
Concluding remarks	398
Exercises	399
Answers	401

Chapter 11	Using Logic to Formulate SQL Expressions	411
	Some transformation laws	412
	Example 1: Logical implication	415
	Example 2: Universal quantification	416
	Example 3: Implication and universal quantification	417
	Example 4: Correlated subqueries	418
	Example 5: Naming subexpressions	421
	Example 6: More on naming subexpressions	424
	Example 7: Dealing with ambiguity	425
	Example 8: Using COUNT	428
	Example 9: Another variation	429
	Example 10: UNIQUE quantification	429
	Example 11: ALL or ANY comparisons	432
	Example 12: GROUP BY and HAVING	436
	Exercises	438
	Answers	439
Chapter 12	Miscellaneous SQL Topics	443
	SELECT *	444
	Explicit tables	444
	Dot qualification	445
	Range variables	446
	Subqueries	449
	“Possibly nondeterministic” expressions	452
	Empty sets	454
	A simplified BNF grammar	455
	Exercises	458
	Answers	460
Appendix A	The Relational Model	465
	The relational model vs. others	467
	The significance of theory	471
	The relational model defined	473
	Database variables	480
	Objectives of the relational model	482
	Some database principles	483
	What remains to be done?	484

Appendix B	SQL Departures from the Relational Model	489
Appendix C	A Relational Approach to Missing Information	493
	Vertical decomposition	495
	Horizontal decomposition	496
	What do the shaded entries mean?	498
	Constraints	500
	Queries	501
	More on predicates	505
	Exercises	508
	Answers	509
Appendix D	A Tutorial D Grammar	511
Appendix E	Summary of Recommendations	515
Appendix F	NoSQL and Relational Theory	521
	Functional segmentation	524
	Sharding	525
	Eventual consistency	526
	The Fernandez interview	527
Appendix G	Suggestions for Further Reading	533
	Index	549
