<i>Foreword . . . Sir Peter Medawar, FRS</i>	ix
<i>Preface</i>	xi
<i>Acknowledgement</i>	xii
1 The Nature of Induction	1
(i) <i>Induction as a form of ampliative inference</i>	1
(ii) <i>Induction basic to learning and perception</i>	2
(iii) <i>Correction of spontaneous induction by scientific induction</i>	5
2 Analogy	8
(i) <i>Argument from analogy</i>	8
(ii) <i>Interdependence of induction and analogy</i>	10
(iii) <i>Positive and negative analogy</i>	11
3 Observation and Experiment	15
(i) <i>Critical observation</i>	15
(ii) <i>Active experimentation</i>	20
(iii) <i>Chance anomaly prompting experiment</i>	26
(iv) <i>Testimony</i>	30
(v) <i>Measurement</i>	34
4 The Justification of Inductive Inference	47
(i) <i>Empirical generalisations and mathematical prop-         ositions</i>	47
(ii) <i>Tautologies, analytic and synthetic propositions</i>	50
(iii) <i>Hume's problem</i>	52
(iv) <i>Attempts to answer Hume: (a) Kant</i>	55
(v) <i>Attempts to answer Hume: (b) Mill and Keynes</i>	58
(vi) <i>The hopelessness of logical justification of induction</i>	60
(vii) <i>Popper's alternative: the hypothetico-deductive method</i>	61

(viii)	<i>A reason for trusting induction</i>	64
(ix)	<i>The new riddle of induction</i>	66
5	Theories and Laws	70
	(i) <i>Characteristics of scientific theories</i>	70
	(ii) <i>Empirical generalisations and laws</i>	73
	(iii) <i>Mutual support for laws and theories</i>	75
	(iv) <i>Correction of empirical generalisations by theories</i>	76
	(v) <i>Replacement of theories</i>	78
	(vi) <i>Theories as descriptions of the world</i>	79
	(vii) <i>Theories as explanations</i>	83
	(viii) <i>The explanation of Mendeleef's classification of the elements</i>	84
6	The Refutation of Laws and Theories	88
	(i) <i>Refutation of empirical generalisations and laws</i>	88
	(ii) <i>Definitions and analytic propositions</i>	91
	(iii) <i>The logical relation of theories, laws and observation statements</i>	97
	(iv) <i>The refutation of theories</i>	101
7	The Relation of Cause and Effect	106
	(i) <i>Animistic notions of cause</i>	106
	(ii) <i>Necessary and sufficient conditions</i>	108
	(iii) <i>The causal relation as a law</i>	112
	(iv) <i>Mill's canons of induction</i>	115
8	Probability	126
	(i) <i>Two probability problems</i>	126
	(ii) <i>The probability of the truth of generalisations, laws and theories</i>	129
	(iii) <i>The probability of the truth of statistical generalisations</i>	131
	(iv) <i>Summary</i>	133
	<i>Questions and Further Reading</i>	136
	<i>Index</i>	143
