Contents

Preface and Overview	1
Acronyms and Symbols Used	7
1 Introduction to Classic Monte Carlo Simulation	9
1.1 Main Purposes and Means	9
1.2 Generating Pseudo Random Numbers	10
1.3 LLN and Classic Simple Regression	15
1.4 CLT and Simple Sample Averages	20
Exercises	24
2 Monte Carlo Assessment of Moments	27
2.1 MCS Estimation of an Expectation	28
2.2 Analysis of Estimator Bias by Simulation	34
2.3 Assessing the (R)MSE of an Estimator	42
2.4 Summary on Accuracy of MCS Moment Estimates	47
2.5 Moments of OLS in Stable AR(1) Models	49
Exercises	53
3 Monte Carlo Assessment of Probabilities and Quantiles	57
3.1 MCS Estimation of a Probability	58

3.2	Accuracy of Inference in Nonnormal Linear Regression	66
3.3	MCS Estimation of a Quantile	70
3.4	Simulation of Estimators That Have No Moments	73
3.5	Results for Nonlinear Regression Models	78
	Exercises	86
4	Monte Carlo Analysis of Asymptotic Inference	89
4.1	General Characterization of Test Issues	91
4.2	Size Correction and Power Comparisons	98
4.3	Analysis of Various Misspecification Tests	100
4.4	Results for a Model with Jointly Dependent Variables	110
4.5	Results for Nonlinear Models for a Binary Variable	114
	Exercises	117
5	Further Issues Regarding Classic MCS	121
5.1	Some Landmarks in the History of MCS	123
5.2	Options to Enhance the Quality of MCS Studies	124
5.3	Conditioning on Exogenous Variables	129
5.4	Conditioning on Endogenous Variables	135
5.5	A Comprehensive MCS Methodology	138
5.6	Supporting Empirical Findings by a Dedicated MCS Study	145
	Exercises	146
6	Monte Carlo Tests and Bootstrap Inference	149
6.1	Pivotal Monte Carlo Tests	150
6.2	Implementations of PMC Tests	151
6.3	Parametric and Nonparametric Bootstrap Inference	160
6.4	Some Further Perspectives	167
	Exercises	169
A	Appendices	171
A.1	Major Issues in Classic Econometric Inference	171

B Tools for Standard Asymptotic Analysis	179
B.1 Big O and Little o.	179
B.2 Important Laws, Lemmas and Theorems	180
Exercises	181
References	183
