

Invitation to Fixed-Parameter Algorithms

Rolf Niedermeier

Institut für Informatik, Friedrich-Schiller-Universität Jena

OXFORD
UNIVERSITY PRESS

CONTENTS

I FOUNDATIONS

1	Introduction to Fixed-Parameter Algorithms	3
1.1	The satisfiability problem	4
1.2	An example from railway optimization	7
1.3	A communication problem in tree networks	10
1.4	Summary	12
1.5	Exercises	13
1.6	Bibliographical remarks	14
2	Preliminaries and Agreements	17
2.1	Basic sets and problems	17
2.2	Model of computation and running times	17
2.3	Strings and graphs	18
2.4	Complexity and approximation	20
2.5	Bibliographical remarks	21
3	Parameterized Complexity Theory—A Primer	22
3.1	Basic theory	22
3.2	Interpreting fixed-parameter tractability	27
3.3	Exercises	29
3.4	Bibliographical remarks	29
4	Vertex Cover—An Illustrative Example	31
4.1	Parameterizing	32
4.2	Specializing	33
4.3	Generalizing	34
4.4	Counting or enumerating	34
4.5	Lower bounds	35
4.6	Implementing and applying	35
4.7	Using vertex cover structure for other problems	36
4.8	Exercises	38
4.9	Bibliographical remarks	38
5	The Art of Problem Parameterization	41
5.1	Parameter really small?	41
5.2	Guaranteed parameter value?	42
5.3	More than one obvious parameterization?	43
5.4	Close to “trivial” problem instances?	45
5.5	Exercises	47
5.6	Bibliographical remarks	47

6	Summary and Concluding Remarks	49
	II ALGORITHMIC METHODS	
7	Data Reduction and Problem Kernels	53
7.1	Basic definitions and facts	55
7.2	Maximum Satisfiability	58
7.3	Cluster Editing	60
7.4	Vertex Cover	64
7.4.1	Kernelization based on matching	64
7.4.2	Kernelization based on linear programming	68
7.4.3	Kernelization based on crown structures	69
7.4.4	Comparison and discussion	72
7.5	3-Hitting Set	72
7.6	Dominating Set in Planar Graphs	74
7.6.1	The neighborhood of a single vertex	74
7.6.2	The neighborhood of a pair of vertices	77
7.6.3	Reduced graphs and the problem kernel	79
7.7	On lower bounds for problem kernels	80
7.8	Summary and concluding remarks	82
7.9	Exercises	83
7.10	Bibliographical remarks	85
8	Depth-Bounded Search Trees	88
8.1	Basic definitions and facts	91
8.2	Cluster Editing	93
8.3	Vertex Cover	98
8.4	Hitting Set	101
8.5	Closest String	103
8.6	Dominating Set in Planar Graphs	107
8.6.1	Data reduction rules	108
8.6.2	Main result and some remarks	109
8.7	Interleaving search trees and kernelization	110
8.7.1	Basic methodology	111
8.7.2	Interleaving is necessary	113
8.8	Automated search tree generation and analysis	114
8.9	Summary and concluding remarks	119
8.10	Exercises	120
8.11	Bibliographical remarks	121
9	Dynamic Programming	124
9.1	Basic definitions and facts	125
9.2	Knapsack	126
9.3	Steiner Problem in Graphs	128
9.4	Multicommodity Demand Flow in Trees	131

9.5	Tree-structured variants of Set Cover	136
9.5.1	Basic definitions and facts	136
9.5.2	Algorithm for Path-like Weighted Set Cover	139
9.5.3	Algorithm for Tree-like Weighted Set Cover	140
9.6	Shrinking search trees	145
9.7	Summary and concluding remarks	146
9.8	Exercises	147
9.9	Bibliographical remarks	148
10	Tree Decompositions of Graphs	150
10.1	Basic definitions and facts	151
10.2	On the construction of tree decompositions	153
10.3	Planar graphs	155
10.4	Dynamic programming for Vertex Cover	160
10.5	Dynamic programming for Dominating Set	164
10.6	Monadic second-order logic (MSO)	169
10.7	Related graph width parameters	172
10.8	Summary and concluding remarks	174
10.9	Exercises	175
10.10	Bibliographical remarks	176
11	Further Advanced Techniques	177
11.1	Color-coding	178
11.2	Integer linear programming	181
11.3	Iterative compression	184
11.3.1	Vertex Cover	185
11.3.2	Feedback Vertex Set	187
11.4	Greedy localization	190
11.4.1	Set Splitting	191
11.4.2	Set Packing	193
11.5	Graph minor theory	195
11.6	Summary and concluding remarks	197
11.7	Exercises	198
11.8	Bibliographical remarks	199
12	Summary and Concluding Remarks	201
III SOME THEORY, SOME CASE STUDIES		
13	Parameterized Complexity Theory	205
13.1	Basic definitions and concepts	206
13.1.1	Parameterized reducibility	207
13.1.2	Parameterized complexity classes	209
13.2	The complexity class $W[1]$	212
13.3	Concrete parameterized reductions	216
13.3.1	$W[1]$ -hardness proofs	218

13.3.2	Further reductions and $W[2]$ -hardness	226
13.4	Some recent developments	230
13.4.1	Lower bounds and the complexity class $M[1]$	230
13.4.2	Lower bounds and linear FPT reductions	232
13.4.3	Machine models, limited nondeterminism, and bounded FPT	233
13.5	Summary and concluding remarks	234
13.6	Exercises	235
13.7	Bibliographical remarks	235
14	Connections to Approximation Algorithms	237
14.1	Approximation helping parameterization	238
14.2	Parameterization helping approximation	239
14.3	Further (non-)relations	241
14.4	Discussion and concluding remarks	241
14.5	Bibliographical remarks	242
15	Selected Case Studies	243
15.1	Planar and more general graphs	243
15.1.1	Planar graphs	243
15.1.2	More general graphs	245
15.2	Graph modification problems	245
15.2.1	Graph modification and hereditary properties	246
15.2.2	Feedback Vertex Set revisited	247
15.2.3	Graph Bipartization	248
15.2.4	Minimum Fill-In	249
15.2.5	Closest 3-Leaf Power	250
15.3	Miscellaneous graph problems	251
15.3.1	Capacitated Vertex Cover	251
15.3.2	Constraint Bipartite Vertex Cover	253
15.3.3	Graph Coloring	255
15.3.4	Crossing Number	256
15.3.5	Power Dominating Set	257
15.4	Computational biology problems	258
15.4.1	Minimum Quartet Inconsistency	259
15.4.2	Compatibility of Unrooted Phylogenetic Trees	261
15.4.3	Longest Arc-Preserving Common Subsequences	262
15.4.4	Incomplete Perfect Path Phylogeny Haplotyp- ing	264
15.5	Logic and related problems	266
15.5.1	Satisfiability	266
15.5.2	Maximum Satisfiability	268
15.5.3	Constraint satisfaction problems	269
15.5.4	Database queries	270
15.6	Miscellaneous problems	271

15.6.1 Two-dimensional Euclidean TSP	272
15.6.2 Multidimensional matching	273
15.6.3 Matrix Domination	273
15.6.4 Vapnik–Chervonenkis Dimension	274
15.7 Summary and concluding remarks	275
16 Zukunftsmusik	277
References	279
