Preface

v

the goals of education one

1

what are the goals of education? 2

Six cultures and their educational goals 5

Sparta, 5/Athens, 5/Early Rome, 7/Tanzania, 8/China, 10/Israel, 13/A comparison with the United States, 15

The goals of contemporary American education 16

Goal 1: to teach skills and knowledge, 17/Goal 2: to train character and personality, 17/Goal 3: to actualize the child's talents, 20/Goal 4: to achieve social harmony, 21/Goal 5: to narrow the income gap, 22/Goal 6: to create an awareness of group culture, 23

The school as a battleground: current disputes 25

Which goals are primary? 25/Desire for assimilation, 26/Attitude toward obedience, 28/Attitude toward stress and anxiety, 30/Impact of conflict on education, 31

Summary 31

Projects 32

Recommended reading 33

2

the role of the school in socializing
personality and values 34

Major changes in American values since 1800 36

Primary values favored in contemporary United States 40

Obedience to authority, 40/Autonomy and individuality, 41/Language skills: the American password, 44/Competitive attitudes, 46/Group affiliation and social communication, 50/Emotional spontaneity, 51/Egalitarianism, 52/Appropriate sex roles, 53

How American schools teach American values 55

Value bias in materials and curricula, 55/The teacher and the hidden curriculum: reward and punishment, 60/The teacher as a role model: the

effect of identification, 64/Peer influences on socialization, 69/Moral development: new curricula for socialization, 72

Summary	75
Projects	76
Recommended reading	77

the psychological nature of the child two

3

the nature of learning: the processes of change	80
What we mean by learning	82
<i>Duration of change: transient versus permanent, 84/The three classes of change, 84/Universal or culturally specific changes, 85/The mechanisms of change, 87</i>	
Observation as a mechanism of change	87
<i>Imitation, 89/Accommodation, 91/The role of reinforcement, 94/Evaluation of learning theory, 99/Limits to observational learning, 103/Gagné's theory, 104</i>	
Reflective thought as a mechanism of change	107
<i>Matching to a standard, 108/Treating thoughts objectively, 109/Thoughts as change agents for action, 110/Piaget's four main concepts, 111/Piaget's four stages, 113/Evaluation of Piaget's theories, 123</i>	
Implications for teaching	124
Summary	126
Projects	128
Recommended reading	128

4

cognition I: units and processes of problem solving	130
The meaning of cognition	131
Units employed in cognition	133
<i>Schemata, 133/Images, 134/Symbols, 135/Concepts, 136/Rules, 141</i>	
Development of units of cognition: infants and preschool children	142
<i>Early schemata and images, 142/Early symbolization, 144/Developmental changes in concepts, 145/Implications for teaching, 148</i>	

The processes at work in mental activity	153
<i>Process 1: perception, 154/Process 2: memory, 159/Process 3: generating possible solutions, 165/Process 4: evaluation, 167/Process 5: implementing the most appropriate solution, 169/Implications for teaching, 171</i>	
Summary	175
Projects	176
Recommended reading	177

5

cognition II: the development of competence 178

Cognition at work: the executive process	180
<i>Functions of the executive, 181</i>	
The growth of cognitive competence	191
<i>Maturation and experience, 192/The significance of rate of development, 198/Inevitable variations among children, 199</i>	
Competence versus performance	200
<i>Obstacles to successful problem solving, 201</i>	
Implications for teaching: how children learn arithmetic	204
<i>The nature of mathematics, 204/Concept of number, 205/Conservation of number, 211/Readiness for arithmetic, 211/Addition and subtraction, 214</i>	
Summary	219
Projects	220
Recommended reading	221

6

the development of affects and motives 222

The nature of affect	222
<i>Interpreting feeling states, 224/Characteristics of feelings, 226</i>	
Development of affect	230
<i>The infant, 230/The young child, 232/The adolescent, 236/One conception of affect, 237/Developmental changes in children's conceptualization of emotion, 239/Implications for teaching, 243</i>	
Motives	245
<i>Characteristics of motives, 246/Activating specific motives, 246</i>	
Development of motives: infants and young children	248
<i>Motive for presence of caring adults, 249/Motive for mastery, 249/Motive for positive evaluation from others, 250/Motive to regard self as valued, competent, and virtuous, 251/The hostility motive, 254/Motives for control, power, and status, 257/Motive and affect, 259/Motive and action, 260</i>	
Summary	261
Projects	262
Recommended reading	263

7

motivation and expectancy of success in school	264
Major motives operating in school	266
<i>The desire for the teacher's approval, 266/The desire to be similar to the teacher, 267/The desire for mastery of academic skills, 270/The desire to resolve uncertainty, 272/The desire for control, power, and status, 276/ The desire to gratify hostility, 278</i>	
The relationship between expectations and performance	279
<i>Internalizers and externalizers, 280/Teacher attitudes, 282/Optimal level of expectancy, 284</i>	
Differences between boys and girls	285
<i>Individual variations in motivation, 286/Sex typing of school material, 287</i>	
Changes in adolescence	287
<i>A different set of motives, 289/Dissonance in America, 290/Design for school change, 292</i>	
Implications for teaching	294
<i>Ascertain each child's hierarchy of motives, 294/Design productive incentives and rewards, 296/Tailor individual programs, 297/Direct instruction to each child's level, 298/Collaborate with the child on setting goals, 298/Reduce student anxiety, 300/Generate mild uncertainty, 300</i>	
Summary	302
Projects	302
Recommended reading	303

the child in school three

8

intelligence and intelligence tests	306
The basis for American emphasis on intelligence	307
<i>Five American assumptions about intelligence, 310</i>	
Intelligence tests	313
<i>Their history, 313/Two kinds of testing systems, 315/How intelligence tests work, 317/The stability of a child's I.Q., 321/Correlations of I.Q. with other factors, 322/What do I.Q. tests measure? 328</i>	
Guilford's view of intelligence	331
<i>Operations, 332/Contents, 333/Products, 334/Using Guilford's tests, 334</i>	

Is intelligence inherited?	335
<i>Studies of twins, 336/The genetics of intelligence and the norm of reaction, 338/The racial hypothesis, 339</i>	
Implications for teaching	343
<i>What I.Q. tests can do, 343/What I.Q. tests cannot do, 345</i>	
Summary	347
Projects	348
Recommended reading	349

9

classroom testing and evaluation 350

The purpose of testing in schools	350
<i>How testing serves the students, 351/How testing serves the teachers, 354/How testing serves the school, 354/The disadvantages of tests, 355/The advantages of tests, 356</i>	
The design of tests	361
<i>What do tests measure? 361/Cognitive objectives, 362/Criterion-referenced and norm-referenced tests, 364</i>	
Standardized achievement tests	365
<i>Transformed scores, 367/Computing transformed scores, 368</i>	
Implications for teaching: teacher-constructed tests	375
<i>What should a test contain? 375/Power or speed? 376/Norm-referenced or criterion-referenced? 376/What form should questions take? 377/The use and review of test results, 386/Grading, 386</i>	
Summary	387
Projects	389
Recommended reading	389

10

explaining school failure 390

Known physiological causes	392
<i>Sensory disabilities, 392/Neurological disorders, 394/Differentiating among children with intellectual impairment, 395</i>	
The puzzle of relative retardation	396
The central problem: learning to read	399
<i>Biological factors in reading failure, 400/Psychological factors in reading failure, 410</i>	
Implications for teaching: strategies and curricula	424
<i>Planning curricula that work, 425/Phonics drill cards, 426/Initial Teaching Alphabet, 428/What about perceptual training? 428/Providing a better self-image, 429/Arranging the school day, 430/Encouraging a reflective attitude, 433/Using relevant reading texts, 433/Capacity for recovery, 434</i>	

Summary	435
Projects	436
Recommended reading	437

11

classroom atmosphere and management	438
Philosophical choices teachers make	440
<i>Attitude toward disruptive behavior: rigid or flexible? 441/Academic work: self-directed or structured by the teacher? 441/Classroom mode: competitive or cooperative? 443/Running the classroom: teacher control or student participation? 444/Results of major choices, 445</i>	
The characteristics of the teacher	450
<i>Warmth: do students perceive they are valued?. 450/Justice: do students believe they are treated fairly? 451/Attitude toward error, 451/Competence, 453</i>	
Identifying problems in classroom-control	453
Implications for teaching	456
<i>Some specific strategies, 456/Behavior modification: one form of classroom management, 459/How to prevent disturbance, 472/Handling disruption when it occurs, 474/The effective use of punishment, 475/Other alternatives, 477/The structure of American schools, 477</i>	
Summary	480
Projects	482
Recommended reading	482

current problems and tentative solutions four

12

social class and ethnicity	486
The impact of poverty on learning	489
<i>Why are poor children less able students? 490/Conflicting value systems, 493</i>	

School factors affecting performance	495
<i>How teachers regard their students, 495/What children learn from their classmates, 499/The language of minority-group children, 500/Difficulties in motivating children from poor families, 505</i>	
What can go wrong in a ghetto school	505
Implications for teaching	508
<i>The case for improving schools in poor neighborhoods, 508/Diversity of skills, 510/Strategies to aid the performance of poor children, 511/A ghetto school that works, 514/A rising tide to raise all boats, 518</i>	
Summary	518
Projects	520
Recommended reading	521

13

tomorrow's education: meeting individual needs	522
<i>In collaboration with Dr. Lauren P. Resnick</i>	

Compensatory education	522
<i>Programs for preschool children, 524/Elementary school: Project Follow-Through, 531/Infancy programs, 532/Evaluating intervention programs, 534</i>	
Adapting education to individual differences	538
<i>The theory behind mastery learning, 538/Computer-assisted instruction, 544</i>	
The gifted child	548
<i>Changing attitudes toward gifted children, 549/Radical acceleration, 552</i>	
Creativity	553
<i>Components of creativity, 554/Characteristics of creative people, 555/Encouraging creative thinking in school, 557</i>	
Summary	559
Projects	561
Recommended reading	562
