| 1 | Electronic Structure in Aqueous Acid–Base Chemistry | 1 |
| 1. | The Proton in Compounds | 1 |
| 2. | The Oxy-Acid–Bases | 5 |
| 3. | Brønsted Acid–Base Pairs versus “Hydrolysis” | 6 |
| | Problems | 8 |
| 2 | Chemical Equilibrium Relations and the pH System | 9 |
| 1. | The Equilibrium Constant | 9 |
| 2. | Water | 12 |
| 3. | Monoprotic Acids | 13 |
| 4. | Bases and the K_b | 14 |
| 5. | The pH System | 15 |
| | Problems | 19 |
| 3 | Monoprotic Acid–Base Equilibria in Water Solutions | 21 |
| 1. | A Complete Equation Treatment | 21 |
| 2. | Graphical Illustrations | 24 |
| 3. | Procedure for Solving pH Problems | 31 |
| 4. | Summary | 35 |
| | Problems | 36 |

| | | |
|----------|---|-----------|
| 4 | Monoprotic Acid–Base Diagrams | 39 |
| 1. | Equilibrium Ratio Plots | 39 |
| 2. | Logarithmic Fraction and Concentration Diagrams. . . | 44 |
| 3. | Logarithmic Concentration Diagrams: H and OH Intersection Method | 51 |
| 4. | Summary | 54 |
| | Selected Reading | 54 |
| | Problems | 55 |
| | | |
| 5 | Polyprotic Acid–Base Equilibria: Relations and Diagrams | 57 |
| 1. | Constants and Conventions | 57 |
| 2. | Alpha Fractions and Diagrams | 59 |
| 3. | Log Ratio Diagrams | 61 |
| 4. | Graphical Solutions to Polyprotic pH Problems | 65 |
| 5. | Logarithmic Fraction and Concentration Diagrams .. | 71 |
| 6. | Microscopic versus Macroscopic Equilibrium Constants | 75 |
| 7. | Summary | 77 |
| | Selected Reading | 77 |
| | Problems | 78 |
| | | |
| 6 | Applications of Acid–Base Relations | 79 |
| 1. | pH Indicators | 79 |
| 2. | Separations | 80 |
| 3. | Some Physiological pH Effects. | 83 |
| 4. | pH Calculations for Mixtures and Polyprotic Cases. . . . | 85 |
| | 4.1. Mixtures of Two Monoprotic Acid–Base Systems | 85 |
| | 4.2. Calculation in Polyprotic Systems. | 88 |
| | 4.3. Effects of pH on Reaction Rates | 95 |
| 5. | Summary | 97 |
| | Problems | 98 |

| | | |
|----------|---|------------|
| 7 | Acid–Base Titration Curves | 101 |
| 1. | The Monoprotic Weak Acid–Strong Base Curve | 101 |
| 2. | Slope and Buffer Index | 102 |
| 3. | Graphical Methods for Location of Titration End Points | 105 |
| 3.1. | Linearizing Titration Data | 105 |
| 3.2. | Linearization of pH Data for the Titration of Polyprotic and Mixture Systems | 113 |
| | Selected Reading | 116 |
| | Problems | 117 |
| | | |
| 8 | Metal Ion–Ligand Systems | 119 |
| 1. | General View of M–L Systems | 119 |
| 2. | Useful Relations Derived from Sets of Step Equilibria .. | 122 |
| 3. | General Features of Species Distributions | 125 |
| 4. | Approximate Sketching of an Alpha Diagram | 135 |
| 5. | Logarithmic Ratio Plots | 136 |
| | Selected Reading | 139 |
| | Problems | 139 |
| | | |
| 9 | Applications of Metal Ion–Ligand Calculations | 141 |
| 1. | Fe(III)–SCN [−] | 144 |
| 2. | Hg(II)–Cl [−] | 149 |
| 3. | Cu(II)–NH ₃ –EDTA: Competing Ligands | 150 |
| 4. | The pH Effect in EDTA Complexing | 153 |
| 5. | Amino Acid Complexes of Copper and Cobalt Ions .. | 155 |
| 6. | Weak Complexing at Moderate Concentrations: The Sea Water Problem | 157 |
| 7. | Calculation of Equilibrium Constants from Data | 160 |
| 8. | Some Physiological Reactions of Metal Ions | 163 |
| | Problems | 165 |

| | | |
|-----------|--|------------|
| 10 | Solubility Equilibria | 167 |
| 1. | Simple Solubility: No Competing Reactions | 167 |
| 2. | Solubility with Complex Formation | 173 |
| 3. | Multiple Strong Complexing | 176 |
| 4. | Solubilities Dependent upon pH | 180 |
| 5. | Summary | 185 |
| | Problems | 185 |
| 11 | Applications of Solubility Calculations | 187 |
| 1. | CaCO ₃ Solubility in Open Systems: CO ₂ Pressure a Variable | 187 |
| 2. | Ampholyte Solubility: An Amino Acid | 190 |
| 3. | The Solubility of Silver Halides in Ammonia Solutions | 192 |
| 4. | Mineral Precipitation from Sea Water | 196 |
| 5. | The Problem of Uniqueness of the Solid Phase | 197 |
| 6. | The Calcium–Phosphate System: Bone and Mineral Formation | 198 |
| 7. | Solubility Affected by Amino Acid Chelation | 202 |
| | Problems | 204 |
| 12 | Oxidation–Reduction | 207 |
| 1. | Definitions and Relations of Electrochemistry | 207 |
| 2. | Log Activity versus Potential Diagrams | 209 |
| 3. | Potential versus pH (<i>E</i> –pH) Diagrams | 213 |
| 4. | Applications | 217 |
| 4.1. | <i>E</i> –pH Diagram for Iron | 217 |
| 4.2. | <i>E</i> –pH Diagram for Manganese | 220 |
| 4.3. | Effects of Complexing and Precipitating Agents | 222 |
| | Problems | 227 |
| | Appendixes | 229 |
| A-1. | Ionic Activity Coefficients from Kielland and by the Davies Equation | 229 |
| A-2. | Computer Program for Plotting Alpha Diagrams .. | 231 |
| A-3. | Typical Run of Computer Program of Appendix A-2 | 235 |
