Unipotent and Nilpotent Classes in Simple Algebraic Groups and Lie Algebras

Martin W. Liebeck
Gary M. Seitz

American Mathematical Society
Providence, Rhode Island

Contents

Preface	xi
Chapter 1. Introduction	1
Chapter 2. Preliminaries	9
2.1. Notation	9
2.2. Subgroups	13
2.3. Automorphisms and Lie algebras	15
2.4. Frobenius morphisms and the Lang-Steinberg theorem	19
2.5. Nilpotent and unipotent elements	20
2.6. Distinguished parabolic subgroups	24
2.7. Centralizers of nilpotent elements	28
2.8. Distinguished elements in characteristic zero	34
Chapter 3. Classical groups in good characteristic	39
3.1. Preliminary lemmas	40
3.2. Proof of Theorem 3.1	43
3.3. Additional information	49
Chapter 4. Classical groups in bad characteristic: statement of results	59
Chapter 5. Nilpotent elements: the symplectic and orthogonal cases, $p = 2$	65
5.1. Indecomposables	65
5.2. Distinguished nilpotent elements	67
5.3. Distinguished normal form	69
5.4. Centralizers of nilpotent elements I: connected centralizers	71
5.5. Centralizers of nilpotent elements II: component groups	78
5.6. Orthogonal groups of odd dimension	86
5.7. Splitting	89
5.8. Labellings of some nilpotent classes	90
Chapter 6. Unipotent elements in symplectic and orthogonal groups, $p = 2$	91
6.1. Indecomposables	91
6.2. Distinguished unipotent elements	92
6.3. A map from unipotents to nilpotents in $SO(V)$	93
6.4. A lemma on representations	94
6.5. Centralizers of unipotents I: connected centralizers	96
6.6. Centralizers of unipotents II: component groups	101
6.7. Splitting	109
6.8. Orthogonal groups of odd dimension	110
6.9. Labellings of some unipotent classes	110

Chapter 7. Finite classical groups	113
7.1. Good characteristic	113
7.2. Bad characteristic	116
Chapter 8. Tables of examples in low dimensions	119
Chapter 9. Exceptional groups: statement of results for nilpotent elements	129
Chapter 10. Parabolic subgroups and labellings	133
10.1. T -labellings and associated parabolic subgroups	133
10.2. Labellings of some distinguished classes in classical groups	136
Chapter 11. Reductive subgroups	139
Chapter 12. Annihilator spaces of nilpotent elements	153
12.1. Lemmas on representation theory	153
12.2. Annihilator spaces of distinguished nilpotent elements	156
12.3. Further results	165
Chapter 13. Standard distinguished nilpotent elements	169
13.1. Distinguished nilpotent elements corresponding to distinguished parabolic subgroups	169
13.2. Component groups	181
13.3. Subgroups J, R	201
Chapter 14. Exceptional distinguished nilpotent elements	203
Chapter 15. Nilpotent classes and centralizers in E_8	219
15.1. Preliminary lemmas	220
15.2. Proof of Theorem 15.1. I: strategy	225
15.3. Proof of Theorem 15.1. II: calculation of the centralizers	228
15.4. Proof of Theorem 15.1. III: completeness of the list	258
Chapter 16. Nilpotent elements in the other exceptional types	263
16.1. The cases where $(G_0, p) \neq (F_4, 2)$ or $(G_2, 3)$	263
16.2. The case $(G_0, p) = (G_2, 3)$	267
16.3. The case $(G_0, p) = (F_4, 2)$	268
16.4. Dual pairs	276
Chapter 17. Exceptional groups: statement of results for unipotent elements	281
Chapter 18. Corresponding unipotent and nilpotent elements	287
Chapter 19. Distinguished unipotent elements	299
19.1. The proof of Theorem 19.1	301
19.2. The proof of Theorem 19.2	310
Chapter 20. Non-distinguished unipotent classes	317
20.1. The case $G = E_6, E_7, E_8$	317
20.2. The case $G = F_4, p \neq 2$	329
20.3. The case $G = F_4, p = 2$	330
20.4. The case $G = G_2$	332
20.5. Proofs of the results 17.1 - 17.10	332

Chapter 21. Proofs of Theorems 1, 2 and Corollaries 3 - 8	341
Chapter 22. Tables of nilpotent and unipotent classes in the exceptional groups	351
22.1. Classes and centralizers in exceptional algebraic groups	351
22.2. Unipotent classes and centralizers in finite exceptional groups	351
22.3. The dual pairs J, R	352
Bibliography	373
Glossary of symbols	377
Index	379
