

CONTENTS

PREFACE	II
PART ONE: CRITICAL	
I. PREVALENT VIEWS OF SCIENCE	19
i. The popular view	19
ii. Philosophical views	20
II. INDUCTION	27
i. Disclaimer of necessity for justification	27
ii. Induction and probability	32
iii. The pragmatic justification of induction	42
iv. Instrumentalism	47
v. New puzzles for old	48
vi. The unreasonableness of induction	49
III. THE EMPIRICIST TREATMENT OF DEDUCTION AND NECESSITY	52
i. Conventionalism	52
ii. Deduction and explanation	54
iii. Counterfactual conditionals	61
iv. Conclusion	67
IV. EMPIRICIST REFORMERS	68
i. Dilution of empiricism	68
ii. Kneale on necessity, perception and consilience	69
iii. Popper on falsification	72
(a) Basic statements	73
(b) Hypothetico-deductive method	79
PART TWO: HISTORICAL	
V. NON-EMPIRICAL ASPECTS OF SCIENTIFIC PROCEDURE	85
i. The Copernican revolution	85
(a) Copernicus	86
(b) Tycho Brahe	89
(c) Kepler	91
(d) Galileo	93
(e) Newton	102

ii. Dalton and chemical combination	109
iii. The conservation of mass and energy	111
iv. Relativity	114

VI. 'DEDUCTION FROM PHENOMENA'— CASE HISTORIES	122
i. Kepler's determination of the orbit of Mars	124
ii. Harvey's discovery of the circulation of the blood	139
iii. Newton's experiments	154
iv. Lavoisier and combustion	167
v. Darwin's defence of the evolution hypothesis	178
vi. The discovery of the positron	189
vii. Findings	196

VII. SCIENTIFIC ADVANCE	203
i. Conceptual systems	203
ii. Recognition of observed data	207
iii. Articulation and proliferation of schemata	210
iv. The origins of change	212
v. The transition process	215
vi. Innovation and conservatism	224
vii. System and development	231

PART THREE: EPISTEMOLOGICAL

VIII. PERCEPTION	237
i. The epistemological crux	237
ii. Common views of perception	238
iii. Sense-data	240
iv. Critique and merits of sense-data theories	243
v. Achievement	244
vi. Discrepancy between 'data' and percept	246
vii. Schemata	249
viii. Context	251
ix. Innate and acquired schemata	256
x. Influence of past experience	263
xi. Interpretation	271
xii. Degrees of organization	284
xiii. Perception and science	290

IX. QUESTION AND ANSWER	293
i. Science and common sense	293
ii. Question and presupposition	299
iii. The origins of hypotheses	305
iv. Analogy and enumeration	310
v. Abduction	313
vi. Confirmation	316
vii. Note: What is meant by 'discovery'?	319
X. THE LOGIC OF CONSTRUCTION	325
i. The concept of structure	325
ii. Formalism, logic and psychology	326
iii. Systematic thinking	332
iv. Necessity and causality	339
v. Probability	341
vi. Induction and deduction	347
vii. Science as a system	350
XI. THE DIALECTIC OF PROGRESS	352
i. Comprehensiveness and consistency as marks of adequacy	352
ii. Objections and criticisms	352
iii. Science as a scale	360
iv. Dialectic	365
v. The unity of science	368
vi. Hierarchy	369
vii. Agreement of results	370
XII. SCIENCE AND TRUTH	372
i. Objectivity	372
ii. Science and reality	373
iii. Criticism and defence	377
iv. Knowledge and its object	384
v. Validity and progress	385
vi. Science and metaphysics	387
vii. Science and religion	388
INDEX	391
