Preface v

1 **Statistics and the Behavioral Scientist** 1

Introduction	1	1.1 The Population and the Sample	2
1.2 What Is Statistics? What Is Its Role in the Scientific Method?	3		
Summary	4		

2 **Description of the Data** 6

Introduction	6	2.1 Kinds of Measurement	7	2.2 Frequency Distributions	7
2.3 Comments Concerning Histograms	12	2.4 Summary Numerical Methods	14	2.5 Measures of Central Tendency	14
2.6 Measures of Variability	18	2.7 The Empirical Rule	24	2.8 A Short Method for Calculating the Sum of Squares of Deviations	26
2.9 Another Measure of Relative Standing: The z Score	29	2.10 Estimating Population Parameters	34	Summary	34

3 **Description of Data: Two Variables** 39

Introduction	39	3.1 The Scattergram	40
3.2 The Correlation Coefficient	44	Summary	55

4 **Probability** 58

Introduction	58	4.1 The Meaning of Probability	59
4.2 Finding the Probability of an Experimental Outcome	62	4.3 Random Variables	63
4.4 Discrete Random Variables and Their Probability Distributions	67	4.5 Continuous Random Variables and Their Probability Distributions	70
4.6 Parameters of Populations	72	4.7 Random Sampling	73
Summary	75		

5 The Binomial Probability Distribution 78

Introduction	78	5.1 The Binomial Experiment	78	5.2 The Binomial Probability Distribution	80
		5.3 The Mean and Variance for the Binomial Random Variable	89	5.4 Test of a Research Hypothesis	92
		5.5 Significance Levels	106	Summary	112

6 Some Nonparametric Statistical Tests 116

Introduction	116	6.1 Experimental Designs in Psychology: An Introduction	117	6.2 Comparing Two Populations: The Independent Sampling Design and the Matched Pairs Design	120
		6.3 Nonparametric and Parametric Population Comparisons	125	6.4 The Sign Test for Comparing Populations	125
		6.5 The Mann-Whitney U Test for an Independent Sampling Experiment	135	6.6 The Wilcoxon Rank Sum Test for a Matched Pairs Experiment	143
		Summary	150		

7 The Normal Probability Distribution 155

Introduction	155	7.1 Properties of the Normal Probability Distribution	156	7.2 The Central Limit Theorem	158
		7.3 Statistics and Sampling Distributions	162	7.4 Tabulated Areas of the Normal Probability Distribution	164
		7.5 The Normal Approximation to the Binomial Distribution	171	7.6 Approximate Nonparametric Tests Using the Normal Distribution	179
		Summary	187		

8 Parametric Statistical Inference 192

Introduction	192	8.1 Types of Estimators	194	8.2 Point Estimation of a Population Mean	198
		8.3 Interval Estimation of a Population Mean	201	8.4 Estimation from Large Samples	205
		8.5 Estimating the Difference Between Two Means	206	8.6 Estimating the Parameter of a Binomial Distribution	209
		8.7 Estimating the Difference Between Two Binomial Parameters	212	8.8 Choosing the Sample Size	214
		8.9 Large-Sample Parametric Hypothesis Testing	218	Summary	231

9 Small-Sample Parametric Inference 236

Introduction	236	9.1 The Student's t Distribution	237
9.2 Small-Sample Inferences About a Population Mean	241		
9.3 Small-Sample Inferences About the Difference Between Two Means: The Independent Sampling Design	246	9.4 Small-Sample Inferences About Two Population Means: The Matched Pairs Design	253
9.5 Comparing Two Population Variances: The F Distribution	262		
9.6 Parametric Versus Nonparametric Statistical Inference	269		
Summary	270		

10 The Design of Psychological Experiments 275

Introduction	275	10.1 The Elements of a Psychological Experiment: Some New Ideas	276	10.2 The Strategy to Use in Designing Good Psychological Experiments	278
		10.3 The Process of Designing an Experiment	280	10.4 Volume-increasing Experimental Designs	281
		10.5 Noise-reducing Experimental Designs	286	10.6 Using Repeated Measurements	288
		10.7 Random Sampling and Randomization by Using a Random Number Table	290	Summary	293

11 The Analysis of Variance 298

Introduction	298	11.1 Partition of a Sum of Squares	299
11.2 The Logic Behind an Analysis of Variance Test	300		
11.3 The Analysis of Variance F Test	304	11.4 The Analysis of Variance for Comparing More than Two Populations	306
11.5 The Analysis of Variance Summary Table	313	11.6 Pairwise Comparisons Among Means in a Completely Randomized Design	314
11.7 The Randomized Block Design	322	11.8 The Analysis of Variance for a Randomized Block Design	324
		11.9 Pairwise Comparisons Among Means in a Randomized Block Design	334
11.10 Selecting the Sample Size	336	11.11 The Analysis of Variance for Two-way Classifications	339
		11.12 Analysis of Variance for the Repeated Measures Design	352
		Summary	362

12 Linear Regression and Correlation 368

Introduction	368	12.1 A Linear Probabilistic Model	369
12.2 The Method of Least Squares	373	12.3 The Random Error	

vi • Contents

Term ε	378	12.4 Inferences Concerning the Slope of the Regression Line: A Check of Model Adequacy	380	12.5 Two Types of Predictions	385	12.6 Estimating the Average Value of y for a Given Value of x	387	12.7 Predicting a Particular Value of y for a Given Value of x	389	12.8 The Correlation Coefficient	392	12.9 Simple Linear Regression: An Example	397	12.10 A Multivariate Predictor	404	Summary	405
--------------------	-----	--	-----	-------------------------------	-----	---	-----	--	-----	----------------------------------	-----	---	-----	--------------------------------	-----	---------	-----

13 The Analysis of Enumerative Data 408

Introduction	408	13.1 The Multinomial Experiment	409
13.2 The Chi-square Test	410	13.3 A Test of an Hypothesis About Specified Cell Probabilities	414
13.4 Contingency Tables	416	13.5 $r \times c$ Tables with Fixed Row or Column Totals	422
13.6 Other Applications	425	Summary	426

14 Nonparametric Analysis of Variance 432

Introduction	432	14.1 The Kruskal-Wallis H Test for the Completely Randomized Design	433	14.2 The Friedman Test for Randomized Block Designs	438	Summary	443
--------------	-----	---	-----	---	-----	---------	-----

15 A Summary and Conclusion 446

Appendix I Useful Statistical Tests and Confidence Intervals	449
Appendix II Tables	453
Table 1 Binomial Probability Tables	454
Table 2 Distribution Function of U	458
Table 3 Critical Values of T in the Wilcoxon Matched Pairs Signed Rank Test	463
Table 4 Normal Curve Areas	464
Table 5 Critical Values of t	465
Table 6 Percentage Points of the F Distribution ($\alpha = .05$)	466
Table 7 Percentage Points of the F Distribution ($\alpha = .01$)	468
Table 8 Percentage Points of the Studentized Range, $q(r, \nu)$	470
Table 9 Critical Values of Chi-Square	472
Table 10 Squares, Cubes, and Roots	474
Table 11 Random Numbers	487
Glossary	490
Answers to Exercises	494
Index	501
