Foreword	VII
CHAPTER I	
FUNDAMENTALS OF THE THEORY OF OBSERVATIONAL ERRORS BASED ON THE CONCEPT OF ELEMENTARY ERROR	
1. Generalities on the samples of repeated observations	1
2. The genesis of the concept of the "law of errors"	4
3. Outline of Hagen's theory	7
4. Binomial variate	8
5. Hagen's variate and Normal variate	12
6. Fitting a normal curve into an experimentally obtained diagram	17
7. Numerical examples of the normal distribution	23
8. How large samples originate in practice	29
CHAPTER II	
VARIOUS DEVELOPMENTS IN THE THEORY OF BINOMIAL, NORMAL AND TRINOMIAL VARIATES	
1. Introduction. Formula of Stirling	34
2. Further discussion of the binomial variate	35
3. Trinomial variate	39
4. Moments of the normal variate	44
5. The role of the mean	47
6. Combinations of normal variates: summations and mixtures	53
7. Gridgeman's analysis of mixtures	56
8. Some reflexions on the notion of homogeneity	60
CHAPTER III	
TREATMENT OF THE LEPTOKURTOSIS BY MEANS OF THE MODULATION THEORY	
1. General introduction to leptokurtosis	63
2. Description of the "modulation" process	64
3. Modulated normal variate	67
4. Analysis of a few observed samples	72
5. Integration of (a, λ)	83

6.	Numerical examples	90
7.	Characteristic functions	94
8.	The role of the Central Limit in MND	97
9.	Modulation of Type II	101
10.	Integration of functions in Type II	104
11.	The top of the modulated normal curve	107
12.	Theory of moments in MND	109

CHAPTER IV

FURTHER DEVELOPMENTS IN THE THEORY OF MND

1.	General foreword	114
2.	Convergence of integrals	115
3.	Dichotomy	119
4.	Dichotomy applied to the summation of variates	125
5.	Generalization of Gridgeman's Index (E)	127
6.	Modulation of variance	129
7.	Chi-square test applied to modulated normal distributions	131
8.	Final reflexions on leptokurtosis and modulation	137

BIBLIOGRAPHY

First part	139
Second part	140
Note	141

APPENDIX I:

Tables of modulated normal functions	142
