

Contents

Chapter 1. Introduction	vii
Chapter 2. Preliminary	1
2.1. Notation	1
2.2. Actions and cocycle actions	1
2.3. Core and canonical extension	3
2.4. Ultraproduct von Neumann algebras	5
2.5. Ultraproduct of reduced von Neumann algebras	7
Chapter 3. Flows on ultraproduct von Neumann algebras	9
3.1. ω -equicontinuity	9
3.2. (α, ω) -equicontinuity	10
3.3. Flows on $\mathcal{M}_\alpha^\omega$ or $\mathcal{M}_{\omega, \alpha}$	15
3.4. Connes spectrum of α_ω	17
3.5. Lift of Borel unitary path	19
Chapter 4. Rohlin flows	25
4.1. Rohlin flows	25
4.2. Invariant approximate innerness	26
Chapter 5. Classification of Rohlin flows	33
5.1. Rohlin projection and averaging technique	33
5.2. 2-cohomology vanishing	38
5.3. Approximation by cocycle perturbation	43
5.4. Approximate vanishing of 1-cohomology	46
5.5. Proof of the main theorem	47
Chapter 6. Applications	53
6.1. Classification of invariantly approximately inner flows	53
6.2. Examples of Rohlin flows on the injective factor of type II_1	58
6.3. The classification of injective factors of type III	60
6.4. Non-fullness of type III_0 factors	61
6.5. Product type flows	64
6.6. Quasi-free flows on Cuntz algebras	72
Chapter 7. Characterization of Rohlin property	77
Chapter 8. Concluding remarks and Problems	89
Chapter 9. Appendix	91
9.1. Basic measure theoretic results	91
9.2. Kac algebraic proof of the 2-cohomology vanishing	91

9.3. Approximation by using continuous unitary path	93
9.4. Borel cocycle actions	95
9.5. Unitary representations and 1-cocycles	96
9.6. Disintegration of automorphisms	97
Bibliography	107
Index	111
