Preface	ix
1 A Tutorial on H_2 Control Theory: The Continuous Time Case	1
1.1 Introduction	1
1.2 LQG control theory	2
1.2.1 Problem formulation	2
1.2.2 Finite horizon solution	3
1.2.3 Infinite horizon solution	7
1.3 H_2 control theory	8
1.3.1 Preliminaries	8
1.3.2 State space solution	10
1.3.3 Wiener-Hopf solution	19
1.3.4 Diophantine equations solution	30
1.4 Comparison and examples	39
1.4.1 The LQG as an H_2 problem	40
1.4.2 Internal stability	41
1.4.3 Solvability assumptions	42
1.4.4 Non-proper plants	45
1.4.5 Design examples	48
1.5 References	55
2 Frequency Domain Solution of the Standard $\mathcal{H}_\infty$ Problem	57
2.1 Introduction	57
2.1.1 Introduction	57
2.1.2 Problem formulation	58
2.1.3 Polynomial matrix fraction representations	61
2.1.4 Outline	62
2.2 Well-posedness and closed-loop stability	62
2.2.1 Introduction	62
2.2.2 Well-posedness	62
2.2.3 Closed-loop stability	63
2.2.4 Redefinition of the standard problem	63
2.3 Lower bound	65
2.3.1 Introduction	65

2.3.2	Lower bound	65
2.3.3	Examples	67
2.3.4	Polynomial formulas	68
2.4	Sublevel solutions	70
2.4.1	Introduction	70
2.4.2	The basic inequality	70
2.4.3	Spectral factorization	71
2.4.4	All sublevel solutions	72
2.4.5	Polynomial formulas	75
2.5	Canonical spectral factorizations	76
2.5.1	Definition	76
2.5.2	Polynomial formulation of the rational factorization	78
2.5.3	Zeros on the imaginary axis	80
2.6	Stability	82
2.6.1	Introduction	82
2.6.2	All stabilizing sublevel compensators	82
2.6.3	Search procedure – Type A and Type B optimal solutions	83
2.7	Factorization algorithm	85
2.7.1	Introduction	85
2.7.2	State space algorithm	85
2.7.3	Noncanonical factorizations	89
2.8	Optimal solutions	90
2.8.1	Introduction	90
2.8.2	All optimal compensators	90
2.8.3	Examples	91
2.9	Conclusions	95
2.10	Appendix: Proofs for section 2.3	95
2.11	Appendix: Proofs for section 2.4	97
2.12	Appendix: Proof of theorem 2.7	100
2.13	Appendix: Proof of the equalizing property	104
2.14	References	105
3	LQG Multivariable Regulation and Tracking Problems for General System Configurations	109
3.1	Introduction	109
3.2	Regulation problem	110
3.2.1	Problem solution	114
3.2.2	Connection with the Wiener-Hopf solution	118
3.2.3	Innovations representations	120
3.2.4	Relationships with other polynomial solutions	125
3.3	Tracking, servo and accessible disturbance problems	129
3.3.1	Problem formulation	130
3.4	Conclusions	137
3.5	Appendix	137
3.6	References	141

4	A Game Theory Polynomial Solution to the H_∞ Control Problem	143
4.1	Abstract	143
4.2	Introduction	143
4.3	Problem definition	145
4.4	The game problem	147
4.4.1	Main result	147
4.4.2	Summary of the simplified solution procedure	155
4.4.3	Comments	156
4.5	Relations to the J -factorization H_∞ problem	156
4.5.1	Introduction	156
4.5.2	The J -factorization solution	157
4.5.3	Connection with the game solution	158
4.6	Relations to the minimum entropy control problem	159
4.7	A design example: mixed sensitivity	160
4.7.1	Mixed sensitivity problem formulation	160
4.7.2	Numerical example	161
4.8	Conclusions	162
4.9	Appendix	164
4.10	References	168
4.11	Acknowledgements	170
5	H_2 Design of Nominal and Robust Discrete Time Filters	171
5.1	Abstract	171
5.2	Introduction	171
5.2.1	Digital communications: a challenging application area	174
5.2.2	Remarks on the notation	176
5.3	Wiener filter design based on polynomial equations	177
5.3.1	A general $\mathcal{H}_2$ filtering problem	177
5.3.2	A structured problem formulation	178
5.3.3	Multisignal deconvolution	180
5.3.4	Decision feedback equalizers	188
5.4	Design of robust filters in input-output form	195
5.4.1	Approaches to robust $\mathcal{H}_2$ estimation	196
5.4.2	The averaged $\mathcal{H}_2$ estimation problem	197
5.4.3	Parameterization of the extended design model	198
5.4.4	Obtaining error models	200
5.4.5	Covariance matrices for the stochastic coefficients	203
5.4.6	Design of the cautious Wiener filter	204
5.5	Robust $\mathcal{H}_2$ filter design	208
5.5.1	Series expansion	209
5.5.2	The robust linear state estimator	211
5.6	Parameter tracking	212
5.7	Acknowledgement	214
5.8	References	214

6	Polynomial Solution of H_2 and H_∞ Optimal Control Problems with Application to Coordinate Measuring Machines	223
6.1	Abstract	223
6.2	Introduction	223
6.3	H_2 control design	226
6.3.1	System model	226
6.3.2	Assumptions	227
6.3.3	The H_2 cost function	227
6.3.4	Dynamic weightings	228
6.3.5	The H_2 controller	229
6.3.6	Properties of the controller	230
6.3.7	Design procedure	231
6.4	H_∞ Robust control problem	231
6.4.1	Generalised H_2 and H_∞ controllers	232
6.5	System and disturbance modelling	233
6.5.1	System modelling	234
6.5.2	Disturbance modelling	234
6.5.3	Overall system model	235
6.6	Simulation and experimental studies	236
6.6.1	System definition	236
6.6.2	Simulation studies	237
6.6.3	Experimental studies	244
6.6.4	H_∞ control	246
6.7	Conclusions	247
6.8	Acknowledgements	250
6.9	References	250
6.10	Appendix: two-DOF H_2 optimal control problem	251
