*To the Instructor xi*

## **Part I When Is a Digital Radio Like an Onion?**

### **1 A Digital Radio 3**

- 1.1 A Digital Radio 3
- 1.2 An Illustrative Design 4
- 1.3 The Complete Onion 12

## **Part II The Component Architecture Layer**

### **2 A Telecommunication System 17**

- 2.1 Electromagnetic Transmission of Analog Waveforms 17
- 2.2 Bandwidth 19
- 2.3 Upconversion at the Transmitter 20
- 2.4 Frequency Division Multiplexing 22
- 2.5 Filters that Remove Frequencies 23
- 2.6 Analog Downconversion 24
- 2.7 Analog Core of Digital Communication System 27
- 2.8 Sampling at the Receiver 28

- 2.9 Digital Communications Around an Analog Core 30
- 2.10 Pulse Shaping 31
- 2.11 Synchronization 33
- 2.12 Equalization 34
- 2.13 Decisions and Error Measures 34
- 2.14 Coding and Decoding 36
- 2.15 A Telecommunication System 37
- 2.16 For Further Reading 37

### **3 The Five Elements 39**

- 3.1 Finding the Spectrum of a Signal 40
- 3.2 The First Element: Oscillators 43
- 3.3 The Second Element: Linear Filters 45
- 3.4 The Third Element: Samplers 48
- 3.5 The Fourth Element: Static Nonlinearities 51
- 3.6 The Fifth Element: Adaptation 53
- 3.7 Summary 54
- 3.8 For Further Reading 54

## **Part III The Idealized System Layer**

### **4 Modelling Corruption 59**

- 4.1 When Bad Things Happen to Good Signals 59
- 4.2 Linear Systems: Linear Filters 64
- 4.3 The Delta "Function" 65

- 4.4 Convolution in Time: It's What Linear Systems Do **70**
- 4.5 Convolution  $\Leftrightarrow$  Multiplication **73**
- 4.6 Improving SNR **76**
- 4.7 For Further Reading **79**

## 5 *Analog (De)modulation* **80**

- 5.1 Amplitude Modulation with Large Carrier **81**
- 5.2 Amplitude Modulation with Suppressed Carrier **84**
- 5.3 Quadrature Modulation **88**
- 5.4 Injection to Intermediate Frequency **90**
- 5.5 For Further Reading **92**

## 6 *Sampling with Automatic Gain Control* **93**

- 6.1 Sampling and Aliasing **94**
- 6.2 Downconversion via Sampling **97**
- 6.3 Exploring Sampling in MATLAB **99**
- 6.4 Interpolation and Reconstruction **101**
- 6.5 Iteration and Optimization **105**
- 6.6 An Example of Optimization: Polynomial Minimization **106**
- 6.7 Automatic Gain Control **110**
- 6.8 Using an AGC to Combat Fading **117**
- 6.9 Summary **118**
- 6.10 For Further Reading **119**

## 7 *Digital Filtering and The DFT* **120**

- 7.1 Discrete Time and Discrete Frequency **120**
- 7.2 Practical Filtering **131**
- 7.3 For Further Reading **139**

## 8 *Bits to Symbols to Signals* **140**

- 8.1 Bits to Symbols **140**
- 8.2 Symbols to Signals **143**
- 8.3 Correlation **145**
- 8.4 Receive Filtering: From Signals to Symbols **147**
- 8.5 Frame Synchronization: From Symbols to Bits **149**

## 9 *Stuff Happens* **152**

- 9.1 An Ideal Digital Communication System **153**
- 9.2 Simulating the Ideal System **155**
- 9.3 Flat Fading: A Simple Impairment and a Simple Fix **163**
- 9.4 Other Impairments: More "What Ifs" **166**

## Part IV The Adaptive Component Layer

## 10 *Carrier Recovery* **177**

- 10.1 Phase and Frequency Estimation via an FFT **178**
- 10.2 Squared Difference Loop **182**
- 10.3 The Phase Locked Loop **186**
- 10.4 The Costas Loop **190**
- 10.5 Decision-Directed Phase Tracking **194**
- 10.6 Frequency Tracking **199**
- 10.7 For Further Reading **204**

## 11 *Pulse Shaping and Receive Filtering* **205**

- 11.1 Spectrum of the Pulse: Spectrum of the Signal **206**
- 11.2 Intersymbol Interference **208**

- 11.3 Eye Diagrams 210
- 11.4 Nyquist Pulses 215
- 11.5 Matched Filtering 219
- 11.6 Matched Transmit and Receive Filters 223

## 12 Timing Recovery 226

- 12.1 The Problem of Timing Recovery 227
- 12.2 An Example 228
- 12.3 Decision-Directed Timing Recovery 231
- 12.4 Timing Recovery via Output Power Maximization 237
- 12.5 Two Examples 240
- 12.6 For Further Reading 243

## 13 Linear Equalization 244

- 13.1 Multipath Interference 245
- 13.2 Trained Least-Squares Linear Equalization 247
- 13.3 An Adaptive Approach to Trained Equalization 257
- 13.4 Decision-Directed Linear Equalization 260
- 13.5 Dispersion-Minimizing Linear Equalization 262
- 13.6 Examples and Observations 265
- 13.7 For Further Reading 272

## 14 Coding 274

- 14.1 What is Information? 275
- 14.2 Redundancy 279
- 14.3 Entropy 284
- 14.4 Channel Capacity 287
- 14.5 Source Coding 292
- 14.6 Channel Coding 296
- 14.7 Encoding a Compact Disc 307
- 14.8 For Further Reading 309

## Part V The Integration Layer

### 15 *Mix'n'match*<sup>®</sup> Receiver Design 313

- 15.1 How the Received Signal Is Constructed 313
- 15.2 A Design Methodology for the  $\mathcal{M}^6$  Receiver 316
- 15.3 The  $\mathcal{M}^6$  Receiver Design Challenge 323
- 15.4 For Further Reading 325

### A *Transforms, Identities, and Formulas* 327

- A.1 Trigonometric Identities 327
- A.2 Fourier Transforms and Properties 328
- A.3 Energy and Power 332
- A.4 Z-Transforms and Properties 333
- A.5 Integral and Derivative Formulas 333
- A.6 Matrix Algebra 334

### B *Simulating Noise* 336

### C *Envelope of a Bandpass Signal* 341

### D *Relating the Fourier Transform to the DFT* 346

- D.1 The Fourier Transform and Its Inverse 346
- D.2 The DFT and the Fourier Transform 347

### E *Power Spectral Density* 351

**F** *Relating Difference  
Equations to Frequency  
Response and Intersymbol  
Interference 354*

- F.1 *Z-Transforms 354*
- F.2 *Sketching the Frequency Response from  
the Z-Transform 356*
- F.3 *Measuring Intersymbol Interference 359*

**G** *Averages and Averaging 363*

- G.1 *Averages and Filters 363*
- G.2 *Derivatives and Filters 364*
- G.3 *Differentiation Is a Technique,  
Approximation Is an Art 367*

*Index 372*
