

Contents

Preface	viii
1. A Simple Laboratory Exercise	1
1.1 <i>Coming to Grips with Statistics</i>	1
1.2 <i>Standardizing a Pipette by Weighing the Deliveries</i>	2
1.3 <i>Purpose, and therefore Design, of the Exercise</i>	2
1.4 <i>Arranging a Random Sequence</i>	4
1.5 <i>Tabulating Results</i>	6
1.6 <i>Choosing a Calculator</i>	7
1.7 <i>Arithmetic Mean and Standard Deviation</i>	8
1.8 <i>Precision and Accuracy</i>	13
1.9 <i>Use of y and x</i>	15
2. How to Condense the Bulkiness of Data	16
2.1 <i>First, What is Statistics?</i>	17
2.2 <i>Constructing a Histogram</i>	20
2.3 <i>Interpreting the Histogram</i>	23
2.4 <i>The Normal Distribution</i>	25
2.5 <i>Estimating the Mean and Standard Deviation of a Large Sample</i>	31
2.6 <i>Representing the Normal Curve as a Straight Line</i>	34
2.7 <i>Uncertainties in Estimating a Mean</i>	38
2.8 <i>Addendum: Plotting a Normal Distribution Curve</i>	40
3. Is That Difference Significant?	42
3.1 <i>Various Kinds of 'Difference' Problem</i>	43
3.2 <i>Choosing the Right Statistical Test</i>	45
3.3 <i>Taking the Road to the t-Test</i>	46
3.4 <i>Further Insights into the t-Test</i>	53
3.5 <i>Other Variations in the t-Test</i>	61
3.6 <i>Comparison of Variances: the F-Test</i>	63
3.7 <i>Summary of Statistical Tests for Analysis of Normally-Distributed, Grouped Data</i>	66

4. More about Differences	67
4.1 <i>Staying Normal or Going Non-Parametric</i>	68
4.2 <i>Rankits to the Rescue</i>	69
4.3 <i>Introduction to Non-Parametric Tests</i>	79
4.4 <i>Mann-Whitney U-Test</i>	79
4.5 <i>Non-Parametric Testing of Paired Data</i>	84
4.6 <i>Comparing Two Samples from Unknown and not Necessarily Similar Distributions (K-S Test)</i>	87
4.7 <i>Non-parametric Testing of Three or More Samples and General Summary</i>	91
5. How to Deal with Proportion Data	92
5.1 <i>Developing a Sense of Proportion</i>	92
5.2 <i>Is that Difference Significant?</i>	93
5.3 <i>Are those Ampoules Sterile?</i>	103
5.4 <i>Estimation of ED₅₀, LD₅₀ and Their Confidence Limits</i>	104
5.5 <i>Estimation of Most Probable Numbers (MPN)</i>	100
5.6 <i>Is that Inheritance Mendelian? More χ^2</i>	112
5.7 <i>Goodness-of-Fit to a Normal Distribution</i>	113
6. How to Deal with Count Data	118
6.1 <i>From Bacterial Colonies to Umbrellas Left on Buses</i>	118
6.2 <i>Total Cell Counts and the Poisson Distribution</i>	120
6.3 <i>Standard Error and Confidence Limits of Counts</i>	127
6.4 <i>Beyond Simple Counting</i>	130
6.5 <i>Where Poisson Fails to Rule</i>	133
7. Design of Experiments and Introduction to Analysis of Variance	141
7.1 <i>More Mileage from a Simple Pipetting Experiment</i>	142
7.2 <i>General Aspects of Simple Analysis of Variance</i>	149
7.3 <i>Regrettably We Now Need Some more Jargon</i>	155
7.4 <i>Experiment Design as an Art-Form</i>	158
8. Experiment Design and Analysis Continued	163
8.1 <i>From Pipettes to Mice</i>	164
8.2 <i>Two Independent Variables</i>	167
8.3 <i>Superimposing Randomized Blocks with Nesting</i>	174
8.4 <i>Dealing with Non-Normal Variables</i>	180
8.5 <i>The Multi-Factorial Approach to Experiments</i>	183
9. Correlation, Regression and Line-Fitting Through Graph Points: Standard Curves	188
9.1 <i>Preliminary Signposting</i>	189
9.2 <i>Correlation</i>	190

9.3 <i>Linear Regression— or Fitting the Best Straight Line Through a Series of Points</i>	198
9.4 <i>Standard Curves and Interpolating Unknown y-Values Thereon</i>	203
9.5 <i>Radioimmuno Assays</i>	212
10. <i>Parallel-Line and Slope-Ratio Assays</i>	214
10.1 <i>Introduction to Biological Assay</i>	215
10.2 <i>Four-Point Parallel-Line Assay</i>	217
10.3 <i>Six-Point Parallel-Line Assay</i>	229
10.4 <i>Quantal Response Assay</i>	236
10.5 <i>Slope-Ratio Assay</i>	238
