**Scalarization of Dyadic
Spectral Green's Functions
and Network Formalism
for Full-wave Analysis of
Planar Lines and Antennas**

Reihe **10**: Informatik/
Kommunikationstechnik Nr. **492**

Contents

Nomenclature	VIII
1. Scalarization of Dyadic Spectral Green's Functions and Network Formalism for Layered Media	1
1.1 Introduction.....	1
1.2 Basic equations for dyadic Green's functions.....	4
1.3 Vector spectral eigenfunctions.....	7
1.4 Dyadic spectral eigenfunctions.....	9
1.5 Scalarization of dyadic spectral Green's functions.....	12
1.5.1 Electric-type dyadic spectral Green's functions.....	12
1.5.2 Magnetic-type dyadic spectral Green's functions.....	13
1.6 Network schematization of EM waves with three-dimensional excitation functions.....	16
1.7 Spectral dyadic Green's functions for the single-layer structure — transmission line equation approach.....	19
1.7.1 Electric-type problem.....	19
1.7.2 Magnetic-type problem.....	21
1.8 Dyadic spectral Green's functions for multilayer structures — circuit theory approach.....	23
1.8.1 Standing-wave approach.....	23
1.8.2 Traveling-wave approach.....	24
2. Formulation of EM Problems in Layered Media by Using Dyadic Spectral Green's Functions	29

2.1	Introduction.....	29
2.2	Determination of basic EM parameters in layered media	31
2.2.1	Power and input impedance.....	31
2.2.2	Far radiation fields.....	32
2.3	Dispersion characteristics of planar lines	33
2.3.1	Single signal channel planar lines.....	33
2.3.2	Multi-signal channel planar lines	36
2.4	Resonant frequencies of planar resonators and antennas	38
2.5	Discontinuities of planar lines and planar antennas	41
2.5.1	Network analysis—travelling wave method.....	41
2.5.2	Network analysis — circuit theory.....	47
2.6	Slot-coupled planar circuits and antennas — combined method.....	51
2.6.1	Analytic model	51
2.6.2	Combined method	54
3.	Applications	57
3.1	Slot-coupled microstrip patches and enhancement of their bandwidth	57
3.1.1	Single microstrip patch antennas.....	57
3.1.2	Electrically small antenna-fed multiple patch antennas.....	60
3.2	Slot-coupled multiple printed dipoles and multi-frequency operation .	66
3.2.1	Parameter study.....	67
3.2.2	Multifrequency operation.....	73
3.3	Slotline and coplanar waveguide fed apertures and improvement of their polarization	74
3.3.1	Coplanar waveguide-fed circular aperture antennas	75
3.3.2	Slotline-fed single rectangular aperture antennas.....	78
3.3.3	Coplanar waveguide-fed double rectangular aperture	

antennas	82
3.4 Mutual coupling between slot-coupled microstrip patches in finite arrays	88
3.4.1 Mutual coupling effects in finite arrays	88
3.4.2 Results	88
4. Summary	97
Appendix	99
A.1 Wave transmission matrices	99
A.2 Fourier transformation of expansion functions	102
Reference	103
