

Dipl.-Ing. Volker Braun, Essen

**On Modulation, Coding and
Signal Processing for Optical
and Magnetic Recording
Systems**

Reihe **10**: Informatik/
Kommunikationstechnik Nr. **504**

Contents

1	Introduction	1
2	Relevant Properties of DC-free Runlength-Limited Sequences	6
2.1	Introduction	7
2.2	Preliminaries	7
2.3	Trade-off between Redundancy and Low-frequency Suppression of Maxentropic DCRLL Sequences	10
2.4	The Sum Variance as a Criterion of the Low-frequency Characteristic of Maxentropic DCRLL Sequences	11
2.4.1	The Influence of the Constraints on the Sum Variance	11
2.4.2	The Relation between Sum Variance and Low-frequency Characteristic	13
2.5	Mathematical Foundation	14
2.6	Performances of Implemented Codes	15
2.7	Conclusion	15
2.8	Appendix A: Derivation of the Sum Variance	18
2.9	Appendix B: Asymptotic Behavior of the Extra Redundancy	20
2.9.1	Bounded k Constraint	20
2.9.2	Absence of a Specific k Constraint	22
2.10	Appendix C: The Runlength Distribution of Maxentropic DC-free Sequences	25
3	Maximum-Likelihood Detection of a DC-free Modulation Code	27
3.1	Introduction	28
3.2	Introduction to the DCC System	28
3.3	8-to-10 Modulation - ETM	29
3.4	Sources of Possible Disturbances	32
3.5	Introduction to Maximum-Likelihood Detection	32
3.6	Asymptotic Coding Gain	35
3.7	Realization of the Detection Algorithms	36
3.7.1	Fully-Fledged Viterbi Algorithm	36
3.7.2	Suboptimal Trellis Detection	37
3.8	Simulation Results	38

3.9	Experimental Results	39
3.10	An Alternative Coding Scheme Using an 8-to-10 DC-free Parity-Check Code	39
3.10.1	Code Construction	40
3.10.2	Error Rate Performance and Spectral Properties	40
3.10.3	Examples of Feasible Code Rates	41
3.11	Conclusions	42
3.12	Appendix: The Path Memory Length	44
4	Golay Complementary Sequences for Channel Characterization	45
4.1	Introduction	46
4.2	The Measurement Setup	47
4.3	The MLBS Technique	48
4.4	A Practical Nonlinear Channel Model	50
4.5	The Golay Technique	51
4.5.1	Preliminaries	51
4.5.2	Experimental Results	52
4.5.3	Waveform Synthesis	53
4.5.4	The Golay Technique in the Presence of Nonlinear Distortion	55
4.6	Elimination of Artifacts Caused by Even Order Nonlinear Distortion	57
4.7	Conclusions	58
4.8	Appendix A: Derivation of the Golay Dipulse Response	62
4.9	Appendix B: Analysis of a Fourth Order Golay Correlation Term	64
4.10	Appendix C: Appropriate MLBS Generator Polynomials	73
4.10.1	Detailed Description of the MLBS Technique	73
4.10.2	The MLBS Technique in the Presence of Nonlinear Distortion	74
4.10.3	Appropriate MLBS Generator Polynomials	75
5	Summary	77
	Bibliography	79
	List of Publications	82
