Frontispiece	ii
Preface to the second edition	xi
Preface to the first edition	xiii
Acknowledgements	xv
Main symbols and abbreviations	xvi
<b>1 A quantitative approach to plant-environment interactions</b>	<b>1</b>
<i>Modelling</i>	1
<i>Use of experiments</i>	6
<b>2 Radiation</b>	<b>9</b>
<i>Radiation laws</i>	10
<i>Radiation measurement</i>	19
<i>Radiation in natural environments</i>	21
<i>Radiation in plant communities</i>	30
<i>Radiation distribution within plant canopies</i>	32
<i>Indirect methods for determining canopy structure</i>	42
<i>Sample problems</i>	44
<b>3 Heat, mass and momentum transfer</b>	<b>46</b>
<i>Measures of concentration</i>	46
<i>Molecular transport processes</i>	48
<i>Convective and turbulent transfer</i>	57
<i>Transfer processes within and above plant canopies</i>	65
<i>Sample problems</i>	71
<b>4 Plant water relations</b>	<b>72</b>
<i>Physical and chemical properties of water</i>	72
<i>Cell water relations</i>	77
<i>Measurement of plant water status</i>	82
<i>Hydraulic flow</i>	88

	<i>Liquid phase transport processes</i>	102
	<i>Sample problems</i>	104
<b>5</b>	<b>Energy balance and evaporation</b>	<b>106</b>
	<i>Energy balance</i>	106
	<i>Measures of water vapour concentration</i>	109
	<i>Evaporation</i>	112
	<i>Evaporation from plant communities</i>	120
	<i>Estimating evaporation rates</i>	124
	<i>Dew</i>	128
	<i>Sample problems</i>	130
<b>6</b>	<b>Stomata</b>	<b>131</b>
	<i>Distribution of stomata</i>	131
	<i>Stomatal mechanics</i>	133
	<i>Methods of study</i>	137
	<i>Stomatal response to environment</i>	145
	<i>Sample problems</i>	161
<b>7</b>	<b>Photosynthesis and respiration</b>	<b>163</b>
	<i>Photosynthesis</i>	163
	<i>Respiration</i>	171
	<i>Measurement and analysis of CO<sub>2</sub> exchange</i>	176
	<i>Chlorophyll fluorescence</i>	179
	<i>Control of photosynthesis</i>	185
	<i>Carbon isotope discrimination</i>	193
	<i>Response to environment</i>	195
	<i>Photosynthetic models, efficiency and productivity</i>	203
	<i>Evolutionary and ecological aspects</i>	211
	<i>Sample problems</i>	214
<b>8</b>	<b>Light and plant development</b>	<b>215</b>
	<i>Sample problem</i>	230
<b>9</b>	<b>Temperature</b>	<b>231</b>
	<i>Physical basis of the control of tissue temperature</i>	231
	<i>Physiological effects of temperature</i>	239
	<i>Effects of temperature on plant development</i>	246
	<i>High temperature injury</i>	250
	<i>Low temperature injury</i>	251
	<i>Ecological aspects</i>	256
	<i>Sample problems</i>	263
<b>10</b>	<b>Drought and drought tolerance</b>	<b>264</b>
	<i>Plant water deficits and physiological processes</i>	264

<i>Drought tolerance</i>	269
<i>Further analysis of water use efficiency</i>	279
<i>Crop water stress index</i>	293
<b>11 Wind, altitude, carbon dioxide and atmospheric pollutants</b>	<b>296</b>
<i>Wind</i>	296
<i>Altitude</i>	306
<i>Greenhouse effect</i>	313
<i>Atmospheric pollutants</i>	324
<b>12 Physiology and yield improvement</b>	<b>332</b>
<i>Variety improvement</i>	334
<i>Modelling and determination of crop ideotype</i>	339
<i>Development of screening tests</i>	344
<i>Examples of applications</i>	346
Appendixes	355
References	377
Index	413
