## PART I — LIQUID CHROMATOGRAPHY

Chapter 1 Chromatographic Systems: Maintenance and Troubleshooting	3
Chapter 2 Solvent Delivery Systems	19
Purpose. General design—pulsed vs. pulseless. Ideal design. Routine maintenance and cleaning-solvents, changing solvents, seals, gaskets. Problems and solutions.	
Chapter 3 LC Sample Introduction Systems	41
Purpose. General design—loop injectors, septa, syringes, dead-volume. Ideal design—loop injector, dead-volume. Routine maintenance and cleaning-solvents. Problems and solutions.	
Chapter 4 LC Columns (Selection & Preparation), Column Ovens and Column Heaters	51
Selecting the type of separation—liquid-liquid, liquid-solid, gel permeation, ion exchange. Choice of materials—stainless steel, glass fittings, couplings. Methods associated with packing columns. Column assembly—pre-columns, purge, dead-volume. Problems and solutions.	
Chapter 5 LC Detection Systems	63
Purpose. General designs—refractive index, ultraviolet, flame, wire-filament, fluorimeter. Ideal design. Routine maintenance and cleaning-solvents. Problems and solutions.	
Chapter 6 Comprehensive Troubleshooting of LC Systems	81
Baseline problems—noise, drift, spikes, stair-stepping. Poor peak shapes. Loss of resolution. Pump and flow problems. Other problems.	

**PART II — GAS CHROMATOGRAPHY**

Chapter 7 Introduction to Gas Chromatography	95
Chapter 8 Pneumatic and Sample Introduction Systems	105
Carrier gas filters. Pressure regulators. Rotameters. Flow controllers. Sample inlet systems. Gas valves and splitters. Flow programmers. Routine maintenance and troubleshooting. Problems and solutions.	
Chapter 9 Pyrolytic Inlet Systems	137
Requirements. Instrumentation. Comparison of performance of various pyrolyzers. Troubleshooting. Problems and solutions.	
Chapter 10 Gas Chromatographic Column Ovens and Temperature Controllers	161
Column arrangements. Oven designs. Temperature controllers and programmers. Routine maintenance. Problems and solutions.	
Chapter 11 Gas Chromatography Detectors	191
Function. Terms and formulas. Types of detectors: thermal conductivity, flame ionization, electron capture, and other types of detectors. Maintenance. Troubleshooting TCD, FID, ECD. Problems and solutions.	
Chapter 12 Integral Electronics	223
Electrometers. TCD electrical circuits. Recorders. Integrators. Computer linkups. Problems and solutions.	
Chapter 13 Auxiliary Systems	257
GC interfaces: I.R., U.V., M.S. Problems and solutions.	
Chapter 14 Gas Chromatographic Comprehensive Troubleshooting	277
Baseline problems: drift, noise, zeroing, cycling, spikes. Distorted peaks, ghost peaks, others. Reproducibility problems: retention time, sensitivity changes. Other problems.	
Appendix A Cleaning of GC Detectors	305
Appendix B Care and Handling of Microsyringes	309
Appendix C Troubleshooting Clues from the Rotameter	311
Appendix D Troubleshooting of Silicon Controlled Rectifier (SCR) Heating Systems	313
Appendix E A Rapid Fault Isolation Method	317

Appendix F Gas Chromatographic Column Preparation	321
Appendix G Glossary of Terms and Formulas	327
Appendix H Packing and Installation Technique for G.C. Columns	331
Appendix I Conditioning of G.C. Columns	337
Appendix J Routine Maintenance of Your G.C.	341
Appendix K Gas Chromatography Operating Hints	350
<i>Index</i>	355
