

TABLE OF CONTENTS

FOREWORD	V
PREFACE	1
Chapter I:	THE PROPERTIES OF SILICON AND ITS COMPOUNDS	3
	General description of the element	3
	Occurrence and uses	4
	Physical and chemical properties	5
	Structural features of silicon	6
	Chemical-analytical characteristics of silicon compounds.	9
Chapter II:	QUALITATIVE DETECTION OF SILICON	24
	Reactions of the silicate ion	25
	Reactions of the fluosilicate ion	26
	Reactions of the silicomolybdate ion	28
	Identification of certain silicon-containing substances	29
Chapter III:	SEPARATION OF SILICON FROM ACCOMPANYING ELEMENTS	32
	Precipitation methods	32
	Distillation methods.	34
	Extraction methods	35
	Chromatographic methods	36
	Electrolysis	37
Chapter IV:	PREPARATION OF SAMPLE FOR ANALYSIS	38
	The taking and comminution of a representative sample of the material	38
	Solubilization or decomposition of material	39
	Fusion	39
	Sintering	42
	Preliminary ignition	44
	Decomposition and solubilization of the products of sintering and fusion	45
Chapter V:	GRAVIMETRIC METHODS	47
	Determination as SiO_2	47
	Other gravimetric methods	62

Chapter VI:	TITRIMETRIC METHODS	68
	Methods based on the properties of silicomolybdic acid	68
	Methods based on the properties of fluosilicic acid	73
	Electrochemical methods	79
Chapter VII:	PHOTOMETRIC METHODS	91
	Structure and some of the properties of silicomolybdic acid	92
	Ions that interfere with the determination of silicon	100
	Methods for the determination of silicon after the separation of interfering impurities by extraction or distillation	105
	Methods for the determination of silicon after the separation of interfering impurities by extraction, distillation or ion exchange	108
	The fluorescence method	110
Chapter VIII:	OTHER METHODS	112
	Spectroscopic methods	112
	Density determinations	114
	Microhardness determination	115
	Thermoelectric determination	116
	Determination of resistivity	117
Chapter IX:	DETERMINATION OF SILICON IN NATURAL AND TECHNOLOGICAL PRODUCTS	118
	Determination of silicon in certain natural and synthetic silicates and in rocks	118
	Determination of silicon in metal silicides and other high-melting compounds	132
	Determination of silicon in metals and alloys	135
	Determination of silicon in natural waters and in condensate	138
	Determination of silicon in organosilicon compounds	142
	Determination of silicon in organoelementsilicon compounds	150
Chapter X:	PHASE ANALYSIS OF SILICON COMPOUNDS	152
	Determination of silicon dioxide	152
Chapter XI:	DETERMINATION OF IMPURITIES IN SILICON AND CERTAIN SILICON COMPOUNDS	167
	Physical methods	169
	Physicochemical and chemical methods	174
	BIBLIOGRAPHY	176
	SUBJECT INDEX	220
