

CONTENTS

Editor's Introduction 5

1. Background 7

- When To Use Discriminant Analysis—the Basic Assumptions 8
- Some Social Science Examples 12
- Additional Readings 14

2. Deriving the Canonical Discriminant Functions 15

- A Spatial Interpretation 16
- The Number of Canonical Discriminant Functions 16
- Deriving the Canonical Discriminant Function Coefficients 18
- Raw Coefficients 22
- Unstandardized Coefficients 22

3. Interpreting the Canonical Discriminant Functions 23

- Calculating Discriminant Scores 24
- Two-Function Plots 27
- One-Function Plots 28
- Standardized Coefficients 29
- Structure Coefficients 31
- How Many Functions are Significant? 34
 - The Number of Functions 34
 - The Relative Percentage 35
 - The Canonical Correlation 36
 - Measuring Residual Discrimination with Wilks's Lambda 38
 - Testing the Significance of Wilks's Lambda 40

4. Classification Procedures 42

- Classification Functions 42
 - Simple Classification Functions 43
 - Generalized Distance Functions 44
 - Probability of Group Membership 45
- Adjusting for Prior Probabilities or Cost of Misclassification 46

Classification Based on Canonical Discriminant Functions	47
Territorial Plots	49
The Classification Matrix	49
Split-Sample Validation	51

5. Stepwise Inclusion of Variables 52

Selection Criteria	54
Wilks's Lambda and the Partial F Ratio	54
Rao's V	54
Mahalanobis Squared Distance Between Closest Groups	55
Between-Groups F	55
Minimizing Residual Variance	56
Minimum Conditions for Selection	56
Tolerance	57
F-To-Enter	57
F-To-Remove	57
A Stepwise Example	58

6. Concluding Remarks 60

Violation of Assumptions	60
Other Problems	63
In Conclusion	63

Notes 65
