

# CONTENTS

Preface xiii

## 1

### INTRODUCTION 1

- 1.1 Measurement Sales 3
- 1.2 The Intermediate Goal: Statistical Inference 8
- Appendix 1: Summation Notation 9

## 2

### PROBABILITY AND SET THEORY: SOME BASIC ASPECTS 15

- 2.1 Definitions of Probability, or “Dealer’s Choice” 15
- 2.2 Introduction to Set Theory: A Classification Scheme 23
- 2.3 Elementary Probability Axioms and Rules 26
- 2.4 The Rules of Addition for Probabilities 30
- 2.5 The Rules of Multiplication for Probabilities 35
- Appendix 2: Counting the Countable 41

## 3

### RANDOM VARIABLES AND PROBABILITY DISTRIBUTION 52

- Introduction 52
- 3.1 Random Variables—Some Conceptual Differences 52
- 3.2 Discrete Random Variables and Probability Distributions 55
- 3.3 Continuous Random Variables and Probability Distributions 58
- 3.4 Mathematical Expectations and Variance 66
- 3.5 A Discrete Theoretical Probability Distribution: The Binomial 75
- 3.6 A Continuous Theoretical Probability Distribution: The Normal Distribution 81
- Summary 89

---

# 4

## EMPIRICAL DISTRIBUTIONS 96

---

- 4.1 Data and Information: The Compromise 96
- 4.2 Measures of Location 104
- 4.3 Measures of Variation 115
- Summary 130
- Appendix 4: Index Numbers 131

---

# 5

## SAMPLING AND SAMPLING DISTRIBUTIONS 147

---

- Introduction 147
- 5.1 Sampling Distribution for the Mean 151
- 5.2 Sampling Distributions from the Binomial 167
- 5.3 Other Sampling Distributions 182
- Summary 183

---

# 6

## STATISTICAL INFERENCE: ESTIMATION 190

---

- 6.1 The Concept of Interval Estimation 190
- 6.2 Estimates, Estimators, and Estimation 193
- 6.3 Guidelines for Choosing an Estimator 195
- 6.4 Confidence-Interval Estimates of the Population Mean 200
- 6.5 Confidence-Interval Estimate of the Population Proportion 218
- 6.6 Determination of Sample Size 221
- 6.7 Surveys, Sampling, and Summary 224

---

# 7

## STATISTICAL INFERENCE: TESTS OF HYPOTHESIS 229

---

- Introduction 229
- 7.1 Test of Hypothesis about a Population Mean: Population Variance Is Known 234
- 7.2 Test of Hypothesis about a Population Mean: Population Variance Is Unknown 254
- 7.3 Tests of Hypothesis about the Population Proportion  $\pi$  261
- 7.4 Comparison of Two Populations 265
- Summary 278

---

# 8

## TESTS OF ASSUMPTIONS AND ANALYSIS OF VARIANCE 286

---

- Introduction 286
- 8.1 The Chi-Square Distribution 287
- 8.2 Application 1: The Goodness-of-Fit Test 289
- 8.3 Application 2: The Test of Independence 300
- 8.4 Application 3: Sampling Distribution of the Sample Variance When Sample Is from a Normally Distributed Population 307
- 8.5 Test of Hypothesis about Three or More Means (Analysis of Variance) 313

---

# 9

## NONPARAMETRIC DISTRIBUTION-FREE ORDER STATISTICS 330

---

- Introduction and Definitions 330
- 9.1 Tests of Randomness 331
- 9.2 Inferences about the Median 340
- 9.3 One-Way Rank Analysis of Variance: The Kruskal-Wallis  $H$  Test 346
- 9.4 Spearman's Rank Correlation Coefficient 352
- Summary 355

---

# 10

## SIMPLE LINEAR REGRESSION AND CORRELATION ANALYSIS 359

---

- 10.1 Why Regression Analysis? 359
- 10.2 Some Elements of Analytical Geometry 360
- 10.3 The Functional Model 362
- 10.4 The Statistical Model 363
- 10.5 The Regression Model 365
- 10.6 Estimation of the Parameters in the Regression Function 369
- 10.7 Inferences about the Linear Model 379
- 10.8 Inferences with the Regression Model 383
- 10.9 The Correlation Model 391
- A "Yellow Sign" Summary 400

---

# 11

## MULTIVARIATE LINEAR AND NONLINEAR REGRESSION 408

---

- 11.1 The General Multivariate Linear Regression Model 408
- 11.2 Multiple Correlation 415
- 11.3 Prediction Intervals 421
- 11.4 Tests about the Three-Variable Linear Model 424
- 11.5 Problems with Using the Multivariate Regression Model 427
- 11.6 Nonlinear Regression 434

---

# 12

## TIME-SERIES ANALYSIS 443

---

- 12.1 Time-Series Components 443
- 12.2 Various Time-Series Models 446
- 12.3 Isolation of Components for the Additive Time-Series Model 452
- 12.4 Determination of Components for the Multiplicative Model 468
- Summary of Time-Series Analysis 476
- Forecasting 479

---

# 13

## THE CONSTRUCTION OF ECONOMIC MODELS 484

---

- 13.1 Model Building 484
- 13.2 The Identification Problem 486
- 13.3 Accuracy Analysis 499

---

# 14

## MODERN DECISION THEORY 514

---

- 14.1 Measuring the Consequences of Your Action 514
- 14.2 Criteria for Choosing a Decision 518
- 14.3 Putting a Limit on Information Costs 521
- 14.4 Bayes' Rule Revisited 523
- 14.5 Including Sample Results in the Decision Process 527
- 14.6 Expected Value of Sample Information 531
- Summary 538

---

**APPENDICES**

---

A	Answers to Selected Exercises	543
B	Case Data	566
C	Appendix Tables	584
I	<i>Squares, square roots, and reciprocals</i>	584
II	<i>5,000 random digits</i>	586
III	<i>Individual binomial probabilities</i>	588
IV(A)	<i>Central area under the standard normal distribution</i>	598
IV(B)	<i>Tail area under the standard normal distribution</i>	599
V	<i>Selected values of the t-distribution</i>	600
VI	<i>Ninety-five percent confidence limits for the population proportion</i>	601
VII	<i>Selected values for the chi-square distribution</i>	602
VIII	<i>Selected values of the F-distribution</i>	603
IX	<i>Critical values of R in one sample runs test</i>	606
X	<i>Selected values for the von Neumann ratio</i>	608
