

CONTENTS

<i>Preface</i>	ix
1 Cavalieri principle and other prerequisites	1
1.1 The Cavalieri principle	1
1.2 Lebesgue factorization	3
1.3 Haar factorization	5
1.4 Further remarks on measures	9
1.5 Some topological remarks	10
1.6 Parametrization maps	14
1.7 Metrics and convexity	15
1.8 Versions of Crofton's theorem	18
2 Measures invariant with respect to translations	20
2.1 The space $\overline{\mathbb{G}}$ of directed lines on \mathbb{R}^2	20
2.2 The space \mathbb{G} of (non-directed) lines in \mathbb{R}^2	21
2.3 The space $\overline{\mathbb{E}}$ of oriented planes in \mathbb{R}^3	22
2.4 The space \mathbb{E} of planes in \mathbb{R}^3	23
2.5 The space $\overline{\mathbb{I}}$ of directed lines in \mathbb{R}^3	23
2.6 The space \mathbb{I} of (non-directed) lines in \mathbb{R}^3	24
2.7 Measure-representing product models	24
2.8 Factorization of measures on spaces with slits	27
2.9 Dispensing with slits	28
2.10 Roses of directions and roses of hits	29
2.11 Density and curvature	30
2.12 The roses of \mathbb{T}_3 -invariant measures on \mathbb{E}	31
2.13 Spaces of segments and flats	34
2.14 Product spaces with slits	36
2.15 Almost sure T -invariance of random measures	37
2.16 Random measures on $\overline{\mathbb{G}}$	38
2.17 Random measures on $\overline{\mathbb{E}}$	40
2.18 Random measures on $\overline{\mathbb{I}}$	41

3	Measures invariant with respect to Euclidean motions	43
3.1	The group W_2 of rotations of \mathbb{R}^2	43
3.2	Rotations of \mathbb{R}^3	44
3.3	The Haar measure on W_3	45
3.4	Geodesic lines on a sphere	46
3.5	Bi-invariance of Haar measures on Euclidean groups	47
3.6	The invariant measure on \bar{G} and G	47
3.7	The form of dg in two other parametrizations of lines	48
3.8	Other parametrizations of geodesic lines on a sphere	50
3.9	The invariant measure on $\bar{\Gamma}$ and Γ	51
3.10	Other parametrizations of lines in \mathbb{R}^3	52
3.11	The invariant measure in the spaces \bar{E} and E	53
3.12	Other parametrizations of planes in \mathbb{R}^3	53
3.13	The kinematic measure	55
3.14	Position–size factorizations	57
3.15	Position–shape factorizations	59
3.16	Position–size–shape factorizations	61
3.17	On measures in shape spaces	67
3.18	The spherical topology of Σ	70
4	Haar measures on groups of affine transformations	72
4.1	The group A_2^0 and its subgroups	72
4.2	Affine deformations of \mathbb{R}^2	74
4.3	The Haar measure on A_2^0	76
4.4	The Haar measure on A_2	77
4.5	Triads of points in \mathbb{R}^2	78
4.6	Another representation of $d^{(n)}V$	80
4.7	Quadruples of points in \mathbb{R}^2	82
4.8	The modified Sylvester problem: four points in \mathbb{R}^2	84
4.9	The group A_3^0 and its subgroups	86
4.10	The group of affine deformations of \mathbb{R}^3	87
4.11	Haar measures on A_3^0 and A_3	89
4.12	V_3 -invariant measure in the space of tetrahedral shapes	90
4.13	Quintuples of points in \mathbb{R}^3	91
4.14	Affine shapes of quintuples in \mathbb{R}^3	91
4.15	A general theorem	91
4.16	The elliptical plane as a space of affine shapes	91
5	Combinatorial integral geometry	10
5.1	Radon rings in \bar{G} and G	10
5.2	Extension of Crofton's theorem	10
5.3	Model approach and the Gauss–Bonnet theorem	10
5.4	Two examples	10
5.5	Rings in E	11
5.6	Planes cutting a convex polyhedron	11
5.7	Reconstruction of the measure from a wedge function	11
5.8	The wedge function in the shift-invariant case	11

5.9	Flag representations of convex bodies	118
5.10	Flag representations and zonoids	119
5.11	Planes hitting a smooth convex body in \mathbb{R}^3	120
5.12	Other ramifications and historical remarks	123
6	Basic integrals	127
6.1	Integrating the number of intersections	127
6.2	The zonoid equation	130
6.3	Integrating the Lebesgue measure of the intersection set	131
6.4	Vertical windows and shift-invariance	133
6.5	Vertical windows and a pair of non-parallel lines	134
6.6	Translational analysis of realizations	137
6.7	Integrals over product spaces	141
6.8	Kinematic analysis of realizations	145
6.9	Pleijel identity	153
6.10	Chords through convex polygons	156
6.11	Integral functions for measures in the space of triangular shapes	158
7	Stochastic point processes	161
7.1	Point processes	161
7.2	k -subsets of a linear interval	162
7.3	Finite sets on $[a, b)$	165
7.4	Consistent families	168
7.5	Situation in other spaces	171
7.6	The example of L. Shepp	173
7.7	Invariant models	174
7.8	Random shift of a lattice	175
7.9	Random motions of a lattice	177
7.10	Lattices of random shape and position	177
7.11	Kallenberg–Mecke–Kingman line processes	179
7.12	Marked point processes: independent marks	181
7.13	Segment processes and random mosaics	185
7.14	Moment measures	187
7.15	Averaging in the space of realizations	192
8	Palm distributions of point processes in \mathbb{R}^n	200
8.1	Typical mark distribution	200
8.2	Reduction to calculation of intensities	202
8.3	The space of anchored realizations	202
8.4	Palm distribution	204
8.5	A continuity assumption	205
8.6	Some examples	207
8.7	Palm formulae in one dimension	208
8.8	Several intervals	210
8.9	\mathbb{T}_1 -invariant renewal processes	211
8.10	Palm formulae for balls in \mathbb{R}^n	216
8.11	The equation $\Pi = \Theta * P$	217

8.12	Asymptotic Poisson distribution	218
8.13	Equations with Palm distribution	220
8.14	Solution by means of density functions	221
9	Poisson-generated geometrical processes	227
9.1	Relative Palm distribution	227
9.2	Extracting point processes on groups	229
9.3	Equally weighted typical polygon in a Poisson line mosaic	231
9.4	Solution	232
9.5	Derivation of the basic relation	234
9.6	Further weightings	235
9.7	Cases of infinite intensity	238
9.8	Thinnings yield probability distributions	240
9.9	Simplices in the Poisson point processes in \mathbb{R}^n	243
9.10	Voronoi mosaics	244
9.11	Mean values for random polygons	247
10	Sections through planar geometrical processes	252
10.1	Palm distribution of line processes on \mathbb{R}^2	252
10.2	Palm formulae for line processes	255
10.3	Second order line processes	256
10.4	Averaging a combinatorial decomposition	262
10.5	Further remarks on line processes	266
10.6	Extension to random mosaics	269
10.7	Boolean models for disc processes	272
10.8	Exponential distribution of typical white intervals	276
