1	Introduction	1
1.1	Statistical properties of chaotic differentiable dynamical systems	1
1.2	Transfer operators. Dynamical determinants. Resonances	6
1.3	Main results. Examples	10
1.4	Main techniques	14
	Comments	16

Part I Smooth expanding maps

2	Smooth expanding maps: The spectrum of the transfer operator	21
2.1	Transfer operators for smooth expanding maps on Hölder functions	21
2.2	Transfer operators for smooth expanding maps on Sobolev spaces	28
2.2.1	Isotropic Sobolev spaces H_p^t and good systems of charts	29
2.2.2	Bounding the essential spectral radius (Theorem 2.15)	32
2.2.3	The key local Lasota–Yorke bound (Lemma 2.21)	36
2.2.4	Fragmentation and reconstitution: Technical lemmas ..	38
2.3	The essential spectral radius on Sobolev spaces: Interpolation	41
2.3.1	Complex interpolation	42
2.3.2	Proof of Theorem 2.15 on H_p^t for integer differentiability	44
2.4	The essential spectral radius: Dyadic decomposition	48
2.4.1	A Paley–Littlewood description of H_p^t and C_*^t	50
2.4.2	Proof of Lemma 2.21 and Theorem 2.15: The general case	53

2.5	Spectral stability and linear response à la Gouëzel-Keller-Liverani	64
	Problems	74
	Comments	76
3	Smooth expanding maps: Dynamical determinants	79
3.1	Ruelle's theorem on the dynamical determinant	79
3.1.1	Dynamical zeta functions	83
3.2	Ruelle's theorem via kneading determinants	86
3.2.1	Outline	86
3.2.2	Flat traces	88
3.3	Dynamical determinants: Completing the proof of Theorem 3.5	93
3.3.1	Proof of Theorem 3.5 if $\alpha > d + t$	94
3.3.2	Nuclear power decomposition via approximation numbers	99
3.3.3	Asymptotic vanishing of flat traces of the non-compact term	104
3.3.4	The case $\alpha \leq d + t$ of low differentiability	111
	Problems	116
	Comments	118

Part II Smooth hyperbolic maps

4	Anisotropic Banach spaces defined via cones	123
4.1	Transfer operators for hyperbolic dynamics	123
4.1.1	Hyperbolic dynamics and anisotropic spaces	123
4.1.2	Bounding the essential spectral radius (Theorem 4.6) ..	128
4.1.3	Reducing to the transitive case	130
4.2	The spaces $W_{p,*}^{t,s}$ and $W_{p,**}^{t,s}$	132
4.2.1	Charts and cone systems adapted to (T, V)	132
4.2.2	Formal definition of the spaces $W_{p,*}^{t,s}$ and $W_{p,**}^{t,s}$	134
4.3	The local Lasota-Yorke lemma and the proof of Theorem 4.6 ..	137
4.3.1	The Paley-Littlewood description of the spaces and the local Lasota-Yorke lemma	138
4.3.2	Fragmentation, reconstitution, and the proof of Theorem 4.6	148
	Problems	152
	Comments	153
5	A variational formula for the essential spectral radius	157
5.1	Yet another anisotropic Banach space: $\mathcal{B}^{t,s}$	157
5.1.1	Defining $\mathcal{B}^{t,s}$	162
5.2	Bounding the essential spectral radius on $\mathcal{B}^{t,s}$ (Theorem 5.1) ..	165
5.3	Spectral stability and linear response	173

Problems	181
Comments	182
6 Dynamical determinants for smooth hyperbolic dynamics ..	183
6.1 Dynamical determinants via regularised determinants and flat traces	183
6.2 Proof of Theorem 6.2 on $d_{T,g}(z)$ if $r - 1 > d + t - s$	187
6.3 Theorem 6.2 in low differentiability $r - 1 \leq d + t - s$	196
6.4 Operators on vector bundles and dynamical zeta functions ...	200
Problems	206
Comments	207
7 Two applications of anisotropic spaces	209
7.1 Equilibrium measures and SRB measures	209
7.1.1 Peripheral spectrum and equilibrium measures	210
7.1.2 Grassmannians and the measure of maximal entropy ..	223
7.1.3 SRB measures for hyperbolic attractors	225
7.2 Tsujii's proof of Anosov's theorem	230
Problems	232
Comments	234
Part III Appendices	
A Spectral theory	237
A.1 Bounding the essential spectral radius: Hennion's theorem ...	237
A.2 Eigenvalues and eigenvectors for different Banach spaces	238
A.3 An abstract perturbation result of Gouëzel-Keller-Liverani ..	240
A.4 Nuclear operators and approximation numbers	245
B Thermodynamic formalism: Non-multiplicative topological pressure	249
C Properly supported operators (pseudolocality)	259
D Alternative proofs for C^∞ dynamics and weights	263
D.1 Elements of symbolic calculus	263
D.2 Essential spectral radius for C^∞ expanding maps	269
D.3 Dynamical determinants for C^∞ expanding maps	271
D.4 The essential spectral radius for C^∞ hyperbolic maps	275
References	281
Index	289
