## PART ONE PRELIMINARY CONSIDERATIONS

<b>1</b>	<b>PATIENT EVALUATION AND DESCRIPTION</b>	<b>3</b>
1.1	Introduction	3
1.2	The Brief Psychiatric Rating Scale	4
1.3	Standard Psychiatric History	14
1.4	Sources of Data	19
1.5	References	22
<b>2</b>	<b>ESSENTIAL MATRIX CONCEPTS AND CALCULATIONS</b>	<b>24</b>
2.1	Introduction	24
2.2	Definitions and Notation	25
2.3	Addition and Subtraction of Matrices	27
2.4	Matrix Multiplication	28
2.5	The Rank of a Matrix	33
2.6	The Inverse of a Matrix	35
2.7	Some Familiar Statistical Forms	41
2.8	Characteristic Roots and Vectors	46
2.9	Computer Program for Basic Matrix Analyses	48
2.10	Exercises	55
2.11	References	56

ix

<b>3</b>	<b>PRINCIPAL-COMPONENTS ANALYSIS</b>	<b>57</b>
3.1	Introduction	57
3.2	Definitions	59
3.3	Computing Principal Components and Associated Variances	61
3.4	Example of Principal-components Calculations	64
3.5	Proof That Iteration with an Arbitrary Trial Vector Results in Identification of the Principal Component Having the Largest Variance	69
3.6	An Extended Example	72
3.7	Summary	84
3.8	Exercises	86
3.9	References	86
<b>PART TWO FACTOR ANALYSIS AND RELATED METHODOLOGY</b>		
<b>4</b>	<b>GENERAL ALGEBRAIC FORMULATION OF FACTOR ANALYSIS</b>	<b>89</b>
4.1	Introduction	89
4.2	Definitions	90
4.3	Correlations and Factor Variates	94
4.4	General Method for Orthogonal-factor Analysis	96
4.5	Orthogonality of Factors	98
4.6	Calculation of Factor-transformation Matrix and Factor- score Equations Given Factor Loadings	99
4.7	Communality Estimates in Factor Analysis	101
4.8	The Reduced Correlation Matrix as a Matrix of Covariances among Common-part Scores	105
4.9	The Number of Factors	108
4.10	Summary	109
4.11	References	110
<b>5</b>	<b>PRINCIPAL-AXES FACTOR ANALYSIS</b>	<b>111</b>
5.1	Introduction	111
5.2	Definitions	112
5.3	Computing Principal-axes Factor Loadings	113

5.4	A Computational Example	113
5.5	Approximate Principal Axes	116
5.6	Orthogonal Rotation of Principal-axes Factors	118
5.7	Interpretation of Rotated Principal-axes Factors	134
5.8	Computer Program for Orthogonal Factor Rotation	136
5.9	References	136
<b>6</b>	<b>ORTHOGONAL POWERED-VECTOR FACTOR ANALYSIS</b>	<b>137</b>
6.1	Introduction	137
6.2	Group-centroid Method	138
6.3	Homogeneous Subsets	139
6.4	Definition of Method	139
6.5	Use of Communality Estimates	140
6.6	A Computational Example	141
6.7	Variations on the Basic Method	150
6.8	Iterative Powered-vector Factor Analysis	151
6.9	Comparison with the Principal-axes Method	152
6.10	Computer Program for Orthogonal Powered-vector Factor Analysis	152
<b>7</b>	<b>OBLIQUE PRIMARY- AND REFERENCE-FACTOR STRUCTURES</b>	<b>157</b>
7.1	Introduction	157
7.2	Primary Factors and Reference Factors	158
7.3	Oblique Powered-vector Factor Analysis	161
7.4	Another Example	166
7.5	General-purpose Orthogonal and Oblique Factor-analysis Program	168
7.6	Interpretation of Primary and Reference Factors	176
7.7	Exercises	179
<b>8</b>	<b>EMPIRICAL METHODS FOR DEVELOPING CLASSIFICATION TYPOLOGIES</b>	<b>180</b>
8.1	Introduction	180
8.2	General Nature of Classification Methods	182
8.3	Different Kinds of Quantitative Similarity Indices	185

8.4	Cluster Analysis of $d^2$ Matrix	189
8.5	Clustering Based on Vector-product Indices	200
8.6	Use of Factor Analysis for Identifying Clusters of Individuals	201
8.7	Direct Cluster-rotation Analysis	207
8.8	Empirically Derived Classification of Psychiatric Depressions	212
8.9	Most Representative Profile Patterns in the General Psychiatric Population	215
8.10	The Theory and Rationale of Linear Typal Analysis	216
8.11	Determination of Optimum Profile Elevation	222
8.12	An Example of Linear Typal Analysis	226
8.13	Computer Program for Linear Typal Analysis	230
8.14	References	239

### PART THREE DISCRIMINATION OF GROUPS

<b>9</b>	<b>DISCRIMINANT FUNCTION FOR TWO GROUPS</b>	<b>243</b>
9.1	Introduction	243
9.2	Definitions	244
9.3	Computing the Weighting Coefficients and Related Values	245
9.4	A Computational Example	248
9.5	Estimating Probabilities of Error in Assignment of Individuals	253
9.6	Bayesian Considerations in Classification Procedures	257
9.7	An Empirical Method for Determining the Critical Value to Minimize Total Classification Errors	263
9.8	A Graphic Method of Determining an Appropriate Cutting Point	265
9.9	Some Practical Applications	267
9.10	Computer Program for Simple Discriminant-function Analysis	275
<b>10</b>	<b>MULTIPLE DISCRIMINANT ANALYSIS</b>	<b>280</b>
10.1	Introduction	280
10.2	Definitions	281
10.3	Computing the Discriminant Functions	283
10.4	A Computational Example	285
10.5	Interpretation	292
10.6	Inserting Measurement Vectors into the Geometric Model	292

CONTENTS	<b>xiii</b>
10.7 Additional Examples	295
10.8 Computer Program for Multiple Discriminant Analysis	300
<b>11 TESTS OF MULTIVARIATE HYPOTHESES</b>	<b>307</b>
11.1 Introduction	307
11.2 Multivariate Generalization of <i>t</i> Test	307
11.3 The Likelihood-ratio Criterion as a Multivariate Generaliza- tion of Analysis-of-variance <i>F</i> Test	316
11.4 Test of Departure from an a Priori Discriminant Function	319
11.5 Complex Multivariate Analysis of Variance	321
11.6 References	325
<b>PART FOUR CLASSIFICATION AMONG GROUPS</b>	
<b>12 DECISION PROCEDURES FOR ASSIGNING INDIVIDUALS AMONG SEVERAL GROUPS</b>	<b>329</b>
12.1 Introduction	329
12.2 Maximum-likelihood and Bayesian Models	331
12.3 A Computational Example	334
12.4 Diagnostic-classification Example	340
12.5 References	344
<b>13 NORMAL-PROBABILITY-DENSITY MODEL FOR CLASSIFICATION AMONG SEVERAL GROUPS</b>	<b>345</b>
13.1 Introduction	345
13.2 Classification Using Normal Probability Densities	347
13.3 A Computational Example	349
13.4 Other Diagnostic Examples and Exercises	355
13.5 Computer Program for Classifying Individuals among Several Groups	367

<b>14</b>	<b>USE OF CANONICAL VARIATES FOR CLASSIFICATION</b>	<b>373</b>
14.1	Introduction	373
14.2	A Computational Example	375
14.3	Classification Using Arbitrary Orthogonal Variates	378
14.4	Use of Computer Program for Classification of Individuals on the Basis of Orthogonal Transformations	382
14.5	Summary	383
<b>15</b>	<b>SIMPLE PROFILE-ANALYSIS METHODS FOR CLASSIFI- CATION</b>	<b>384</b>
15.1	Introduction	384
15.2	Simple Distance-function Classification	385
15.3	Relationship of the Simple $d^2$ to the Normal-probability- density Model	386
15.4	Unequal Variances among Profile Elements	388
15.5	Computational Examples Using Simple Distance Function	389
15.6	Normalized-vector-product-classification Model	393
15.7	Applications of the Normalized-vector-product Method	394
<b>16</b>	<b>PATTERN-PROBABILITY MODEL FOR CLASSIFICATION USING QUALITATIVE DATA</b>	<b>400</b>
16.1	Introduction	400
16.2	Computational Example	403
16.3	Estimation of Base Rates in Specified Subpopulations	406
16.4	Computer Programs for Classification Assignment Using Categorical Data	410
	<b>PART FIVE MULTIPLE REGRESSION AND ANALYSIS OF VARIANCE</b>	
<b>17</b>	<b>MULTIPLE LINEAR REGRESSION AND CORRELATION</b>	<b>415</b>
17.1	Introduction	415
17.2	Definitions and Derivations	416
17.3	Raw-score Multiple-regression Equations and Multiple Correlation	418

CONTENTS	xv
17.4 Example of Multiple-regression Calculations	420
17.5 Tests of Significance for Independent Contributions of Individual Predictor Variables	422
17.6 Testing the Significance of an a Priori Regression Equation	424
17.7 General Linear Regression with Qualitative Independent Variables	425
17.8 The Simple Analysis of Variance as a Linear Regression Problem	425
17.9 Simple Analysis of Covariance by General Regression Method	430
17.10 Multiple Covariance Analysis and Multiple Within-groups Regression	437
17.11 Exercises in Multiple-regression Prediction	438
17.12 Reference	440
<b>18 COMPLEX LEAST-SQUARES ANALYSIS OF VARIANCE</b>	<b>441</b>
18.1 Introduction	441
18.2 Construction of the Design Matrix for Regression Analysis	443
18.3 Partitioning Sums of Squares for the Analysis of Variance	447
18.4 The Proportionate-cell-frequency Case	450
18.5 Examples	454
18.6 Summary and Conclusions	458
18.7 Computer Program for General Linear Regression Analysis of Variance and Covariance	458
18.8 References	468
<b>APPENDIX</b>	<b>469</b>
A.1 Areas and Ordinates of the Normal Curve in Terms of $x/\sigma$	470
A.2 The 5 and 1 Percent Points for the Distribution of $F$	480
A.3 Table of $\chi^2$	484
A.4 Natural Logarithms	485
<b>INDEX</b>	<b>493</b>
