Preface

1 Solving equations by iterative methods	1
1 Introduction to iterative methods	1
2 An algebraic method of successive approximations	1
3 The Newton–Raphson method	4
4 Further problems on solving equations by iterative methods	7
2 Hyperbolic functions	8
1 Introduction to hyperbolic functions	8
2 Graphs of hyperbolic functions	10
3 Hyperbolic identities	12
4 Differentiation of hyperbolic functions	15
5 Solving equations involving hyperbolic functions	17
6 Series expansions for $\cosh x$ and $\sinh x$	19
7 Further problems on hyperbolic functions	21
3 De Moivre’s theorem	23
1 The exponential form of a complex number	23
2 De Moivre’s theorem for powers and roots of complex numbers	24
3 Expressing $\cos n\theta$ and $\sin n\theta$ in terms of powers of $\cos \theta$ and $\sin \theta$	26
4 Expressing powers of $\cos \theta$ and $\sin \theta$ in terms of cosines and sines of multiples of θ	27
5 Further problems on De Moivre’s theorem	29
4 The relationship between trigonometric and hyperbolic functions	31
1 The relationship between trigonometric and hyperbolic functions	31
2 Hyperbolic identities	32
3 Further problems on the relationship between trigonometric and hyperbolic functions	34
5 Methods of differentiation	35
1 Differentiation of common functions	35
2 Differentiation of a product	40
3 Differentiation of a quotient	42
4 Function of a function	44
5 Successive differentiation	46
6 Further problems on methods of differentiation	47
6 Differentiation of implicit functions	50
1 Implicit functions	50
2 Differentiating implicit functions	50
3 Further problems on differentiation of implicit functions	55

7	Logarithmic differentiation	57
1	Introduction to logarithmic differentiation	57
2	Laws of logarithms	57
3	Differentiation of logarithmic functions	57
4	Differentiation of $[f(x)]^x$	60
5	Further problems on logarithmic differentiation	61
8	Differentiation of inverse trigonometric and hyperbolic functions	63
1	Inverse functions	63
2	Differentiation of inverse trigonometric functions	64
3	Logarithmic forms of the inverse hyperbolic functions	69
4	Differentiation of inverse hyperbolic functions	71
5	Further problems on differentiation of inverse trigonometric and hyperbolic functions	76
9	Partial differentiation	79
1	Introduction to partial differentiation	79
2	First order partial derivatives	79
3	Second order partial derivatives	82
4	Further problems on partial differentiation	85
10	Total differential, rates of change and small changes	87
1	Total differential	87
2	Rates of change	88
3	Small changes	91
4	Further problems on total differential, rates of change and small changes	93
11	Introduction to integration	95
1	The process of integration	95
2	The general solution of integrals of the form ax^n	95
3	Standard integrals	96
4	Definite integrals	100
5	Further problems on methods of integration	102
12	Integration using substitutions and partial fractions	104
1	Introduction	104
2	Integration using algebraic substitutions	104
3	Change of limits of integration	107
4	Integration using trigonometric and hyperbolic identities and substitutions	107
5	Integration using partial fractions	118
6	A further trigonometric substitution, the $t = \tan(\theta/2)$ substitution	123
7	Further problems on integration using substitutions and partial fractions	127
13	Integration by parts	133
1	Introduction to integration by parts	133
2	Worked problems on integration by parts	133
3	Further problems on integration by parts	138

14	First order differential equations by separation of variables	140
1	Introduction to differential equations	140
2	The solution of equations of the form $dy/dx = f(x)$	140
3	The solution of equations of the form $dy/dx = f(y)$	142
4	The solution of equations of the form $dy/dx = f(x) \cdot f(y)$	144
5	Further problems on the solution of differential equations by separation of variables	146
15	Homogeneous first order differential equations	150
1	Introduction	150
2	Procedure to solve differential equations of the form $P(dy/dx) = Q$	150
3	Worked problems on homogeneous first order differential equations	150
4	Further problems on homogeneous first order differential equations	153
16	Linear first order differential equations	155
1	Introduction	155
2	Procedure to solve differential equations of the form $(dy/dx) + Py = Q$	156
3	Worked problems on linear first order differential equations	156
4	Further problems on linear first order differential equations	158
17	Second order differential equations (1)	160
1	Introduction	160
2	Procedure to solve differential equations of the form $a(d^2y/dx^2) + b(dy/dx) + cy = 0$	160
3	Worked problems on differential equations of the form $a(d^2y/dx^2) + b(dy/dx) + cy = 0$	161
4	Further problems on differential equations of the form $a(d^2y/dx^2) + b(dy/dx) + cy = 0$	165
18	Second order differential equations (2)	167
1	Complementary function and particular integral	167
2	Procedure to solve differential equations of the form $a(d^2y/dx^2) + b(dy/dx) + cy = f(x)$	167
3	Worked problems on differential equations of the form $a(d^2y/dx^2) + b(dy/dx) + cy = f(x)$	169
4	Further problems on differential equations of the form $a(d^2y/dx^2) + b(dy/dx) + cy = f(x)$	176
19	Fourier series for periodic functions of period 2π	179
1	Introduction	179
2	Periodic functions	179
3	Fourier series	179
4	Worked problems on Fourier series of periodic functions of period 2π	181
5	Further problems on Fourier series of periodic functions of period 2π	185

20	Fourier series for a non-periodic function over range 2π	187
1	Expansion of non-periodic functions	187
2	Worked problems on Fourier series of non-periodic functions over a range of 2π	187
3	Further problems on Fourier series of non-periodic functions over a range of 2π	192
21	Even and odd functions and half-range series	194
1	Even and odd functions	194
2	Fourier cosine and Fourier sine series	196
3	Half-range Fourier series	201
4	Further problems on even and odd functions and half-range Fourier series	204
22	Fourier series over any range	206
1	Expansion of a periodic function of period l	206
2	Half-range Fourier series for functions defined over range l	210
3	Further problems on Fourier series over any range	212
23	A numerical method of harmonic analysis	214
1	Introduction	214
2	Harmonic analysis on data given in tabular or graphical form	214
3	Complex waveform considerations	216
4	Further problems on a numerical method of harmonic analysis	220
24	Introduction to Laplace transforms	223
1	Introduction	223
2	Definition of a Laplace transform	223
3	Linearity property of the Laplace transform	223
4	Laplace transforms of elementary functions	224
5	Worked problems on standard Laplace transforms	226
6	Further problems on Laplace transforms	228
25	Properties of Laplace transforms	230
1	The Laplace transform of $e^{at} f(t)$	230
2	Laplace transforms of the form $e^{at} f(t)$	230
3	The Laplace transforms of derivatives	232
4	The initial and final value theorems	234
5	Further problems on the properties of Laplace transforms	236
26	Inverse Laplace transforms and solution of differential equations	238
1	Definition of the inverse Laplace transform	238
2	Inverse Laplace transforms of simple functions	238
3	Inverse Laplace transforms using partial fractions	241
4	Use of Laplace transforms to solve second order differential equations	243
5	Further problems on inverse Laplace transforms and the solution of differential equations	247

27	Linear correlation	250
1	Introduction to linear correlation	250
2	The product–moment formula for determining the linear correlation coefficient	250
3	The significance of a coefficient of correlation	250
4	Worked problems on linear correlation	251
5	Further problems on linear correlation	253
28	Linear regression	255
1	Introduction to linear regression	255
2	The least-squares regression lines	255
3	Worked problems on linear regression	256
4	Further problems on linear regression	260
