

Contents

Chapter 1. Introduction	1
Chapter 2. Gromov hyperbolic metric spaces	23
Chapter 3. Basic facts about Diophantine approximation	39
Chapter 4. Schmidt's game and McMullen's absolute game	41
Chapter 5. Partition structures	47
Chapter 6. Proof of Theorem 6.1 (Absolute winning of BA_ξ)	59
Chapter 7. Proof of Theorem 7.1 (Generalization of the Jarník–Besicovitch Theorem)	65
Chapter 8. Proof of Theorem 8.1 (Generalization of Khinchin's Theorem)	93
Chapter 9. Proof of Theorem 9.3 (BA_d has full dimension in $\Lambda_r(G)$)	111
Appendix A. Any function is an orbital counting function for some parabolic group	115
Appendix B. Real, complex, and quaternionic hyperbolic spaces	119
Appendix C. The potential function game	123
Appendix D. Proof of Theorem 6.1 using the \mathcal{H} -potential game, where $\mathcal{H} =$ points	129
Appendix E. Winning sets and partition structures	131
References	133
