ASSOCIATION FOR SYMBOLIC LOGIC

**CAMBRIDGE**  
UNIVERSITY PRESS

# CONTENTS

CHAPTER 1. INTRODUCTION .....	1
1.1. Preliminaries .....	4
1.1.1. Indiscernible sequences .....	5
CHAPTER 2. THE NIP PROPERTY AND INVARIANT TYPES .....	7
2.1. NIP formulas .....	7
2.1.1. NIP theories .....	10
2.2. Invariant types .....	12
2.2.1. Products and Morley sequences .....	14
2.2.2. Generically stable types .....	16
2.2.3. Eventual types .....	18
2.3. Additional topics .....	21
2.3.1. Case study: dense trees .....	21
2.3.2. Stability .....	23
2.3.3. The strict order property .....	26
2.3.4. Counting types .....	27
2.3.5. More exercises .....	29
CHAPTER 3. HONEST DEFINITIONS AND APPLICATIONS .....	31
3.1. Stable embeddedness and induced structure .....	31
3.1.1. Stable embeddedness .....	31
3.1.2. Induced structure .....	32
3.1.3. Pairs .....	34
3.2. Honest definitions .....	34
3.3. Naming a submodel .....	36
3.4. Shrinking of indiscernible sequences .....	38
CHAPTER 4. STRONG DEPENDENCE AND DP-RANKS .....	43
4.1. Mutually indiscernible sequences .....	43
4.2. Dp-ranks .....	45
4.3. Strongly dependent theories .....	51
4.4. Superstable theories .....	54
4.5. Exercises .....	55

CHAPTER 5.	FORKING	57
5.1.	Bounded equivalence relations	57
5.2.	Forking	61
5.3.	$\text{bdd}(A)$ -invariance	64
5.4.	$\text{NTP}_2$ and the broom lemma	66
5.5.	Strict non-forking	69
CHAPTER 6.	FINITE COMBINATORICS	73
6.1.	VC-dimension	73
6.2.	The $(p, q)$ -theorem	78
6.3.	Uniformity of honest definitions	80
CHAPTER 7.	MEASURES	85
7.1.	Definitions and basic properties	85
7.2.	Boundedness properties	89
7.3.	Smooth measures	90
7.4.	Invariant measures	92
7.5.	Generically stable measures	96
CHAPTER 8.	DEFINABLY AMENABLE GROUPS	101
8.1.	Connected components	101
8.1.1.	Bounded index subgroups	102
8.1.2.	$G^0$	103
8.1.3.	$G^{00}$	104
8.1.4.	$G^\infty$	104
8.1.5.	Compact quotients	107
8.2.	Definably amenable groups	108
8.3.	fsg groups	112
8.4.	Compact domination	115
CHAPTER 9.	DISTALITY	121
9.1.	Preliminaries and definition	121
9.2.	Base change lemmas	123
9.3.	Distal theories	126
9.3.1.	Strong honest definitions	127
9.3.2.	Generically stable measures	129
9.3.3.	Indiscernible sequences	130
9.3.4.	An example	131
APPENDIX A.	EXAMPLES OF NIP STRUCTURES	133
A.1.	Linear orders and trees	133
A.1.1.	Linear orders	133
A.1.2.	Trees	134
A.1.3.	O-minimality	134

CONTENTS

A.1.4.  $C$ -minimality ..... 136  
A.2. Valued fields ..... 137  
APPENDIX B. PROBABILITY THEORY ..... 145  
REFERENCES ..... 147  
INDEX ..... 155
