

STOCHASTIC LIMIT THEORY

An Introduction for Econometricians

JAMES DAVIDSON

Oxford University Press

Contents

Preface	<i>xiii</i>
Mathematical Symbols and Abbreviations	<i>xix</i>

Part I: Mathematics

1. Sets and Numbers	
1.1 Basic Set Theory	3
1.2 Countable Sets	8
1.3 The Real Continuum	10
1.4 Sequences of Sets	12
1.5 Classes of Subsets	13
1.6 Sigma Fields	15
2. Limits and Continuity	
2.1 The Topology of the Real Line	20
2.2 Sequences and Limits	23
2.3 Functions and Continuity	27
2.4 Vector Sequences and Functions	29
2.5 Sequences of Functions	30
2.6 Summability and Order Relations	31
2.7 Arrays	33
3. Measure	
3.1 Measure Spaces	36
3.2 The Extension Theorem	40
3.3 Non-measurability	46
3.4 Product Spaces	48
3.5 Measurable Transformations	50
3.6 Borel Functions	55
4. Integration	
4.1 Construction of the Integral	57
4.2 Properties of the Integral	61
4.3 Product Measure and Multiple Integrals	64
4.4 The Radon-Nikodym Theorem	69
5. Metric Spaces	
5.1 Distances and Metrics	75
5.2 Separability and Completeness	78
5.3 Examples	82

5.4	Mappings on Metric Spaces	84
5.5	Function Spaces	87
6.	Topology	
6.1	Topological Spaces	93
6.2	Countability and Compactness	94
6.3	Separation Properties	97
6.4	Weak Topologies	101
6.5	The Topology of Product Spaces	102
6.6	Embedding and Metrization	105
Part II: Probability		
7.	Probability Spaces	
7.1	Probability Measures	111
7.2	Conditional Probability	113
7.3	Independence	114
7.4	Product Spaces	115
8.	Random Variables	
8.1	Measures on the Line	117
8.2	Distribution Functions	117
8.3	Examples	122
8.4	Multivariate Distributions	124
8.5	Independent Random Variables	126
9.	Expectations	
9.1	Averages and Integrals	128
9.2	Expectations of Functions of X	130
9.3	Theorems for the Probabilist's Toolbox	132
9.4	Multivariate Distributions	135
9.5	More Theorems for the Toolbox	137
9.6	Random Variables Depending on a Parameter	140
10.	Conditioning	
10.1	Conditioning in Product Measures	143
10.2	Conditioning on a Sigma Field	145
10.3	Conditional Expectations	147
10.4	Some Theorems on Conditional Expectations	149
10.5	Relationships between Subfields	154
10.6	Conditional Distributions	157
11.	Characteristic Functions	
11.1	The Distribution of Sums of Random Variables	161
11.2	Complex Numbers	162

11.3	The Theory of Characteristic Functions	164
11.4	The Inversion Theorem	168
11.5	The Conditional Characteristic Function	171

Part III: Theory of Stochastic Processes

12.	Stochastic Processes	
12.1	Basic Ideas and Terminology	177
12.2	Convergence of Stochastic Sequences	178
12.3	The Probability Model	179
12.4	The Consistency Theorem	183
12.5	Uniform and Limiting Properties	186
12.6	Uniform Integrability	188
13.	Dependence	
13.1	Shift Transformations	191
13.2	Independence and Stationarity	192
13.3	Invariant Events	195
13.4	Ergodicity and Mixing	199
13.5	Subfields and Regularity	203
13.6	Strong and Uniform Mixing	206
14.	Mixing	
14.1	Mixing Sequences of Random Variables	209
14.2	Mixing Inequalities	211
14.3	Mixing in Linear Processes	215
14.4	Sufficient Conditions for Strong and Uniform Mixing	219
15.	Martingales	
15.1	Sequential Conditioning	229
15.2	Extensions of the Martingale Concept	232
15.3	Martingale Convergence	235
15.4	Convergence and the Conditional Variances	238
15.5	Martingale Inequalities	240
16.	Mixingales	
16.1	Definition and Examples	247
16.2	Telescoping Sum Representations	249
16.3	Maximal Inequalities	252
16.4	Uniform Square-integrability	257
17.	Near-Epoch Dependence	
17.1	Definition and Examples	261
17.2	Near-Epoch Dependence and Mixingales	264

17.3	Near-Epoch Dependence and Transformations	267
17.4	Approximability	273

Part IV: The Law of Large Numbers

18.	Stochastic Convergence	
18.1	Almost Sure Convergence	281
18.2	Convergence in Probability	284
18.3	Transformations and Convergence	285
18.4	Convergence in L_p Norm	287
18.5	Examples	288
18.6	Laws of Large Numbers	289
19.	Convergence in L_p-Norm	
19.1	Weak Laws by Mean-Square Convergence	293
19.2	Almost Sure Convergence by the Method of Subsequences	295
19.3	A Martingale Weak Law	298
19.4	A Mixingale Weak Law	302
19.5	Approximable Processes	304
20.	The Strong Law of Large Numbers	
20.1	Technical Tricks for Proving LLNs	306
20.2	The Case of Independence	311
20.3	Martingale Strong Laws	313
20.4	Conditional Variances and Random Weighting	316
20.5	Two Strong Laws for Mixingales	318
20.6	Near-epoch Dependent and Mixing Processes	323
21.	Uniform Stochastic Convergence	
21.1	Stochastic Functions on a Parameter Space	327
21.2	Pointwise and Uniform Stochastic Convergence	330
21.3	Stochastic Equicontinuity	335
21.4	Generic Uniform Convergence	337
21.5	Uniform Laws of Large Numbers	340

Part V: The Central Limit Theorem

22.	Weak Convergence of Distributions	
22.1	Basic Concepts	347
22.2	The Skorokhod Representation Theorem	350
22.3	Weak Convergence and Transformations	355
22.4	Convergence of Moments and Characteristic Functions	357
22.5	Criteria for Weak Convergence	359
22.6	Convergence of Random Sums	361

23. The Classical Central Limit Theorem	
23.1 The i.i.d. Case	364
23.2 Independent Heterogeneous Sequences	368
23.3 Feller's Theorem and Asymptotic Negligibility	373
23.4 The Case of Trending Variances	377
24. CLTs for Dependent Processes	
24.1 A General Convergence Theorem	380
24.2 The Martingale Case	383
24.3 Stationary Ergodic Sequences	385
24.4 The CLT for NED Functions of Mixing Processes	386
24.5 Proving the CLT by the Bernstein Blocking Method	391
25. Some Extensions	
25.1 The CLT with Estimated Normalization	399
25.2 The CLT with Random Norming	403
25.3 The Multivariate CLT	405
25.4 Error Estimation	407

Part VI: The Functional Central Limit Theorem

26. Weak Convergence in Metric Spaces	
26.1 Probability Measures on a Metric Space	413
26.2 Measures and Expectations	416
26.3 Weak Convergence	418
26.4 Metrizing the Space of Measures	422
26.5 Tightness and Convergence	427
26.6 Skorokhod's Representation	431
27. Weak Convergence in a Function Space	
27.1 Measures on Function Spaces	434
27.2 The Space C	437
27.3 Measures on C	440
27.4 Brownian Motion	442
27.5 Weak Convergence on C	447
27.6 The Functional Central Limit Theorem	449
27.7 The Multivariate Case	453
28. Cadlag Functions	
28.1 The Space D	456
28.2 Metrizing D	459
28.3 Billingsley's Metric	461
28.4 Measures on D	465

28.5 Prokhorov's Metric	467
28.6 Compactness and Tightness in D	469
29. FCLTs for Dependent Variables	
29.1 The Distribution of Continuous Functions on D	474
29.2 Asymptotic Independence	479
29.3 The FCLT for NED Functions of Mixing Processes	481
29.4 Transformed Brownian Motion	485
29.5 The Multivariate Case	490
30. Weak Convergence to Stochastic Integrals	
30.1 Weak Limit Results for Random Functionals	496
30.2 Stochastic Processes in Continuous Time	500
30.3 Stochastic Integrals	503
30.4 Convergence to Stochastic Integrals	509
Notes	517
