Preface	IX
Organisational notes	XI
1. <i>Basic concepts</i>	1
1. Preliminaries	1
2. Nilpotency and solubility	5
3. Subideals	9
4. Derivations	12
5. Classes and closure operations	18
6. Representations and modules	21
7. Chain conditions	24
8. Series	27
2. <i>Soluble subideals</i>	29
1. The circle product	29
2. The Derived Join Theorems	44
3. <i>Coalescent classes of Lie algebras</i>	59
1. An example	60
2. Coalescence of classes with minimal conditions	61
3. Coalescence of classes with maximal conditions	65
4. The local coalescence of $\mathfrak{D}$	67
5. A counterexample	72

## Contents

4. <i>Locally coalescent classes of Lie algebras</i>	77
1. The algebra of formal power series	77
2. Complete and locally coalescent classes	84
3. Acceptable subalgebras	90
5. <i>The Mal'cev correspondence</i>	95
1. The Campbell-Hausdorff formula	95
2. Complete groups	97
3. The matrix version	100
4. Inversion of the Campbell-Hausdorff formula	102
5. The general version	107
6. Explicit descriptions	110
6. <i>Locally nilpotent radicals</i>	112
1. The Hirsch-Plotkin radical	112
2. Baer, Fitting, and Gruenberg radicals	113
3. Behaviour under derivations	115
4. Baer and Fitting algebras	119
5. The Levič-Tokarenko theorem	125
7. <i>Lie algebras in which every subalgebra is a subideal</i>	130
1. Nilpotent subideals	133
2. The key lemma and some applications	139
3. Engel conditions	143
4. A counterexample	150
5. Unsin's algebras	154
8. <i>Chain conditions for subideals</i>	162
1. Classes related to Min-si	162
2. The structure of algebras in Min-si	164
3. The case of prime characteristic	167
4. Examples of algebras with Min-si	172
5. Min-si in special classes of algebras	174
6. Max-si in special classes of algebras	175
7. Examples of algebras satisfying Max-si	177

9. <i>Chain conditions on ascendant abelian subalgebras</i>	179
1. Maximal conditions	180
2. Minimal conditions	190
3. Applications	194
10. <i>Existence theorems for abelian subalgebras</i>	200
1. Generalised soluble classes	201
2. Locally finite algebras	203
3. Generalisations of Witt algebras	206
11. <i>Finiteness conditions for soluble Lie algebras</i>	213
1. The maximal condition for ideals	214
2. The double chain condition	221
3. Residual finiteness	225
4. Stuntedness	232
12. <i>Frattini theory</i>	241
1. The Frattini subalgebra	241
2. Soluble algebras: preliminary reductions	243
3. Proof of the main theorem	248
4. Nilpotency criteria	251
5. A splitting theorem	254
13. <i>Neoclassical structure theory</i>	256
1. Classical structure theory	256
2. Local subideals	257
3. Radicals in locally finite algebras	259
4. Semisimplicity	263
5. Levi factors	267
14. <i>Varieties</i>	274
1. Verbal properties	274
2. Invariance properties of verbal ideals	278
3. Ellipticity	284

## Contents

4. Marginal properties	287
5. Hall varieties	289
15. <i>The finite basis problem</i>	295
1. Nilpotent varieties	295
2. Partially well ordered sets	297
3. Metabelian varieties	307
4. Non-finitely based varieties	310
5. Class 2-by-abelian varieties	316
16. <i>Engel conditions</i>	321
1. The second and third Engel conditions	322
2. A non-locally nilpotent Engel algebra	327
3. Finiteness conditions on Engel algebras	330
4. Left and right Engel elements	339
17. <i>Kostrikin's theorem</i>	344
1. The Burnside problem	344
2. Basic computational results	346
3. The existence of an element of order 2	349
4. Elements which generate abelian ideals	360
5. Algebras generated by elements of order 2	374
6. A weakened form of Kostrikin's theorem	380
7. Sketch proof of Kostrikin's theorem	380
18. <i>Razmyslov's theorem</i>	384
1. The construction	384
2. Proof of non-nilpotence	387
Some open questions	395
References	398
Notation index	415
Subject index	421
