

Contents

1	/	PERMUTATIONS AND COMBINATIONS	1
1.1		Definitions	1
1.2		Applications to Probability	4
		Problems	6
2	/	INVERSION FORMULAE	8
2.1		The Principle of Inclusion and Exclusion. Möbius Inversion	8
2.2		Partially Ordered Sets and Their Möbius Functions	14
		Problems	18
3	/	GENERATING FUNCTIONS AND RECURSIONS	19
3.1		Rules and Properties	19
3.2		Combinatorial Problems	22
		Problems	26
4	/	PARTITIONS	29
4.1		Partitions. Identities and Arithmetic Properties	29
4.2		Asymptotic Properties of $p(n)$	39
		Problems	43

5	/	DISTINCT REPRESENTATIVES	44
		5.1 The Theorems of P. Hall and D. König	44
		Problems	53
6	/	RAMSEY'S THEOREM	54
		6.1 Statement of the Theorem	54
		6.2 Application of Ramsey's Theorem	55
		Problems	57
7	/	SOME EXTREMAL PROBLEMS	58
		7.1 The Assignment Problem	58
		7.2 Dilworth's Theorem	62
		Problems	65
8	/	CONVEX SPACES AND LINEAR PROGRAMMING	66
		8.1 Convex Spaces. Convex Cones and Their Duals	66
		8.2 Linear Inequalities	70
		8.3 Linear Programming. The Simplex Method	77
9	/	GRAPHICAL METHODS. DEBRUIJN SEQUENCES	91
		9.1 Complete Cycles	91
		9.2 Theorems on Graphs	93
		9.3 Proof of the DeBruijn Theorem	95
10	/	BLOCK DESIGNS	100
		10.1 General Discussion	100
		10.2 Elementary Theorems on Block Designs	103
		10.3 The Bruck-Ryser-Chowla Theorem	107
		10.4 Statement of the Hasse-Minkowski Theorem. Applications	112 ₂

11	/	DIFFERENCE SETS	120
		11.1 Examples and Definitions	120
		11.2 Finite Fields	123
		11.3 The Theorem of Singer	128
		11.4 The Multiplier Theorem	131
		11.5 Difference Sets in General Groups	136
		11.6 Some Families of Difference Sets	140
12	/	FINITE GEOMETRIES	167
		12.1 Foundations	167
		12.2 Finite Geometries as Block Designs	171
		12.3 Finite Planes	173
		12.4 Some Types of Finite Planes	179
13	/	ORTHOGONAL LATIN SQUARES	189
		13.1 Orthogonality and Orthogonal Arrays	189
		13.2 Main Theorems	190
		13.3 Constructions of Orthogonal Squares	194
		13.4 The End of the Euler Conjecture	200
14	/	HADAMARD MATRICES	204
		14.1 Paley's Constructions	204
		14.2 Williamson's Method	216
		14.3 Three Recent Methods	220
15	/	GENERAL CONSTRUCTIONS OF BLOCK DESIGNS	223
		15.1 Methods of Construction	223
		15.2 Basic Definitions. The Hanani Theorems	223
		15.3 Direct Construction Methods	230
		15.4 Triple Systems	236
		15.5 Block Designs with k Greater than 3	248

16 /	THEOREMS ON COMPLETION AND EMBEDDING	252
16.1	Connor's Method	252
16.2	Copositive and Completely Positive Quadratic Forms	264
16.3	Rational Completions of Incidence Matrices	274
16.4	Integral Solutions of the Incidence Equation	282
APPENDIX I	Balanced Incomplete Block Designs with from 3 to 15 Replications	290
APPENDIX II	Hadamard Matrices of the Williamson Type	299
BIBLIOGRAPHY	301
