A CHAPMAN & HALL BOOK

Contents

Preface	xvii
Contributors	xix
1 Univariate Extreme Value Analysis	1
<i>Dipak Dey, Dooti Roy, and Jun Yan</i>	
1.1 Generalized Extreme Value Distribution	2
1.1.1 Limiting Distribution of Sample Maximum	2
1.1.2 Domain of Attraction	3
1.2 Properties of the GEV Distribution	6
1.3 Exceedances over a Threshold	8
1.4 Parameter Estimation	9
1.4.1 Block Maxima	9
1.4.1.1 Maximum Likelihood	9
1.4.1.2 Probability Weighted Moments or L-Moments	11
1.4.1.3 Maximum Product Spacing	13
1.4.2 Largest Order Statistics	14
1.4.3 Peaks-over-Threshold (POT)	16
1.4.4 Point Process	17
1.5 Further Reading	19
2 Multivariate Extreme Value Analysis	23
<i>Dipak Dey, Yujing Jiang, and Jun Yan</i>	
2.1 Multivariate Extreme Value Distribution	24
2.1.1 Limiting Standardization	24
2.1.2 Extreme-Value Copula	24
2.1.3 Max-Stable Distribution with Unit Fréchet Margins	26
2.2 Measures of Extremal Dependence	27
2.2.1 Upper Tail Dependence	27
2.2.2 Complementary Upper Tail Dependence	27
2.2.3 Extremal Coefficient	28
2.2.4 Coefficient of Tail Dependence	28
2.3 Multivariate Generalized Pareto Distributions	29
2.4 Semiparametric Conditional Dependence Model	31
2.5 Statistical Inferences	32
2.5.1 Likelihood Approach with Block Maxima	32

2.5.2	Threshold Approach	32
2.5.3	Bayesian Approach	34
2.5.4	Conditional Approach of Heffernan–Tawn	34
2.5.5	Goodness-of-Fit Test	36
2.6	Further Reading	37
3	Univariate Extreme Value Mixture Modeling	41
	<i>Carl Scarrott</i>	
3.1	Introduction	41
3.2	Standard Extreme Value Mixture Models	43
3.2.1	Continuity Constraints and Tail Model Extensions	45
3.2.2	Bibliography of Standard Models	47
3.2.3	Inference for Extreme Value Mixture Models	49
3.3	Alternative Extreme Value Mixture Models	52
3.3.1	Hybrid Pareto	53
3.3.2	Composite Lognormal-GPD and Its Variants	55
3.3.3	Dynamically Weighted Mixture Models	56
3.3.4	Interval Transition Mixture Model	58
3.4	Implementation in R Packages	61
3.5	Advice for Developers and Practitioners	62
4	Threshold Selection in Extreme Value Analysis	69
	<i>Frederico Caeiro and M. Ivette Gomes</i>	
4.1	Introduction	69
4.2	Graphical Threshold Selection	72
4.2.1	The Zipf, the Hill, and Sum Plots	72
4.2.2	The Mean Excess Plot	73
4.3	Direct Estimation of the Threshold	73
4.4	Threshold Selection Based on MSE	76
4.4.1	Hall and Welsh’s Threshold Selection	76
4.4.2	Regression Diagnostics’ Selections	77
4.4.3	Hall’s Bootstrap Methodology	77
4.4.4	An Alternative Bootstrap Method	78
4.4.5	Semiparametric Bootstrap	79
4.5	Threshold Selection Partially Based on Bias	80
4.5.1	Drees and Kaufmann’s Estimator	80
4.5.2	Guillou and Hall’s Estimator	80
4.6	Other Heuristic Methods	81
4.7	Application to a Simulated Sample	82
5	Threshold Modeling of Nonstationary Extremes	87
	<i>Paul J. Northrop, Philip Jonathan, and David Randell</i>	
5.1	Introduction	87
5.2	Extreme Value Regression Modeling	88
5.2.1	Storm Severity in the Northern North Sea	89

5.2.2	Extreme Value Regression Models	90
5.2.3	Covariate-Dependent Thresholds	93
5.2.4	Statistical Inference	94
5.3	Parametric Regression Effects	96
5.3.1	Threshold Estimation Using Quantile Regression	96
5.3.2	NHPP Model: Covariate Selection and Checking	98
5.4	Nonparametric Regression Effects	99
5.4.1	Threshold Estimation Using Quantile Regression	100
5.4.2	Poisson-GP Model: Fitting and Checking	101
5.4.3	Approximate Predictive Inference	102
5.5	Discussion	104
6	Block-Maxima of Vines	109
	<i>Matthias Killiches and Claudia Czado</i>	
6.1	Copula Density of the Distribution of Block-Maxima	109
6.2	Vine Copulas	112
6.3	Copula Density of Scaled Block-Maxima	116
7	Time Series of Extremes	131
	<i>Brian J. Reich and Benjamin A. Shaby</i>	
7.1	Motivating Data: Santa Ana Winds	131
7.2	Time Series Data	133
7.3	Methods That Do Not Estimate Dependence	135
7.4	Markov Models	136
7.4.1	GPD Model for Data above a Threshold	136
7.4.2	Markov-Switching Models	137
7.5	Copula Methods	139
7.6	Max-Stable Processes	140
7.6.1	Max-Stable Copula	140
7.6.2	Censored Max-Stable Processes	141
7.7	Hourly Wind Analysis	142
7.7.1	Exploratory Analysis	143
7.7.2	Assessing Model Fit	147
7.8	Discussion	147
8	Max-Autoregressive and Moving Maxima Models for Extremes	153
	<i>Zhengjun Zhang, Liang Peng, and Timothy Idowu</i>	
8.1	Introduction	153
8.2	Finite Dimensional Extreme Value Theory	154
8.2.1	Extreme Value Theory for Dependent Random Variables	154
8.2.2	Limit Laws of Multivariate Extremes of Dependent Sequences	155
8.2.3	Basic Properties of Multivariate Extreme Value Distributions	157

8.2.4	Asymptotic Dependence Index and Coefficient of Tail Dependence	159
8.3	Max-Autoregressive Models	161
8.3.1	MARMA(p, q) Processes	161
8.3.2	Max Positive Alpha Stable Processes and Applications . . .	162
8.3.3	Numerical Examples	163
8.3.4	Extensions	166
8.4	Moving Maxima Models	166
8.4.1	Multivariate Maxima and Moving Maxima Models	166
8.4.2	Estimation	169
8.4.3	Sparse Parametric Moving Maxima Models with Random Coefficients	170
8.4.3.1	Estimation of SM4R Model	174
8.4.3.2	Real Data Modeling	174
8.4.4	Extensions	175
9	Spatial Extremes and Max-Stable Processes	179
	<i>Mathieu Ribatet, Clément Dombry, and Marco Oesting</i>	
9.1	Introduction	179
9.2	Max-Stable Processes	180
9.2.1	Spectral Representation	180
9.2.2	Parametric Max-Stable Process Families	183
9.2.3	Finite Dimensional Distributions	185
9.3	Dependence Measure for Spatial Extremes	187
9.4	Inference	188
9.4.1	Pairwise Likelihood	189
9.4.2	Full Likelihood	190
9.5	Discussion	192
10	Simulation of Max-Stable Processes	195
	<i>Marco Oesting, Mathieu Ribatet, and Clément Dombry</i>	
10.1	Introduction	196
10.2	Basic Procedure and Stopping Rules	198
10.2.1	Representation via Stochastic Processes	198
10.2.2	Mixed Moving Maxima Processes	200
10.3	The Choice of the Spectral Representation	202
10.4	Measures of Simulation Efficiency and Quality	204
10.4.1	Simulation Efficiency	204
10.4.2	Simulation Quality	206
10.5	Examples	207
10.5.1	Moving Maxima Processes	207
10.5.2	Extremal Gaussian and Extremal t Processes	208
10.5.3	Brown–Resnick Processes	209
10.6	Software Packages	212

11	Conditional Simulation of Max-Stable Processes	215
	<i>Clément Dombry, Marco Oesting, and Mathieu Ribatet</i>	
11.1	Introduction: The Prediction Problem and Conditional Distribution	216
11.2	Conditional Distribution of Max-Stable Processes	217
11.2.1	Extremal Functions, Subextremal Functions, and Hitting Scenarios	218
11.2.2	The General Structure of Conditional Distributions	221
11.2.3	Examples of Regular Models	222
11.2.4	Distribution of the Extremal Functions	224
11.3	Conditional Sampling of Max-Stable Processes	226
11.3.1	A Three-Step Procedure for Conditional Sampling	226
11.3.2	Gibbs Sampling for the Conditional Hitting Scenario	227
11.4	Simulation Study	232
11.4.1	Gibbs Sampler	232
11.4.2	Conditional Simulations	232
12	Composite Likelihood for Extreme Values	239
	<i>Huiyan Sang</i>	
12.1	Introduction	239
12.2	Composite Likelihood	241
12.3	Composite Likelihood for Extreme Values	243
12.3.1	Composite Likelihood for Max-Stable Processes	243
12.3.2	Tapered Composite Likelihood for Max-Stable Processes	245
12.3.3	Bayesian Composite Likelihood for Max-Stable Processes	246
12.4	Composite Likelihood for Multivariate Extreme Value Distributions via Copulas	247
12.5	Simulation Study	249
12.6	Discussion	253
13	Bayesian Inference for Extreme Value Modelling	257
	<i>Alec Stephenson</i>	
13.1	Bayesian Theory	257
13.1.1	The Bayesian Paradigm	258
13.1.2	Markov Chain Monte Carlo Simulation	260
13.1.3	The Metropolis–Hastings Algorithm	261
13.1.3.1	Simulated Data Example I	261
13.1.4	The Gibbs Sampler	264
13.1.4.1	Simulated Data Example II	265
13.1.5	Simulation Inferences	267
13.1.6	Prior Elicitation for the GEV Model	268
13.1.6.1	Gamma Distributions for Quantile Differences	270
13.1.6.2	Beta Distributions for Probability Ratios	271

13.1.7 Hierarchical Models	272
13.2 Data Examples	273
13.2.1 A Model for Athletics Data	273
13.3 Further Reading	278
14 Modelling Extremes Using Approximate Bayesian Computation	281
<i>Robert Erhardt and Scott A. Sisson</i>	
14.1 Introduction	281
14.2 A Primer on Approximate Bayesian Computation	285
14.2.1 Approximate Bayesian Computation Basics	286
14.2.2 A Simple Example	290
14.2.3 Other Useful ABC Methods	293
14.3 ABC for Stereological Extremes	295
14.4 ABC and Max-Stable Processes	299
14.5 Discussion	301
15 Estimation of Extreme Conditional Quantiles	307
<i>Huixia Judy Wang and Deyuan Li</i>	
15.1 Introduction	307
15.2 Estimation of Extreme Unconditional Quantiles	308
15.3 Estimation of Extreme Conditional Quantiles	309
15.3.1 Parametric Methods	310
15.3.2 Semiparametric Methods	311
15.3.3 Nonparametric Methods	312
15.3.3.1 Likelihood-Based Methods	313
15.3.3.2 Two-Step Local Estimation	313
15.3.3.3 Kernel Estimation	314
15.3.4 Quantile Regression Methods	315
15.3.4.1 Estimation Based on the Common-Slope Assumption	316
15.3.4.2 Estimation without the Common-Slope Assumption	317
15.3.4.3 Three-Stage Estimation	317
15.4 Numerical Comparison	319
15.5 Final Remarks	321
16 Extreme Dependence Models	325
<i>Boris Beranger and Simone Padoan</i>	
16.1 Introduction	325
16.2 Multivariate Extremes	326
16.2.1 Multivariate Extreme Value Distributions	327
16.2.2 Angular Densities	331
16.2.3 Extremal Dependence	332
16.3 Parametric Models for the Extremal Dependence	335
16.3.1 Asymmetric Logistic Model	335

16.3.2	Tilted Dirichlet Model	336
16.3.3	Pairwise Beta Model	338
16.3.4	Hüsler–Reiss Model	339
16.3.5	Extremal- t Model	340
16.4	Estimating the Extremal Dependence	342
16.5	Real Data Analysis: Air Quality Data	344
16.6	Computational Details	349
17	Nonparametric Estimation of Extremal Dependence	353
	<i>Anna Kiriliouk, Johan Segers, and Michał Warchol</i>	
17.1	Introduction	353
17.2	Tail Dependence	356
17.2.1	The Stable Tail Dependence Function	356
17.2.2	The Angular or Spectral Measure	358
17.3	Estimation	360
17.3.1	Estimating the Spectral Measure	360
17.3.2	Estimating the Stable Tail Dependence Function	364
17.4	Asymptotic Independence	366
17.4.1	Tail Dependence Coefficients	367
17.4.2	Testing for Asymptotic (In)Dependence	369
18	An Overview of Nonparametric Tests of Extreme-Value Dependence and of Some Related Statistical Procedures	377
	<i>Axel Bücher and Ivan Kojadinovic</i>	
18.1	Introduction	377
18.2	Mathematical Foundations	379
18.3	Existing Tests of Extreme-Value Dependence	380
18.3.1	Approaches Based on Kendall’s Distribution	380
18.3.2	Approaches Based on Max-Stability	382
18.3.3	Approaches Based on the Estimation of the Pickands Dependence Function	382
18.3.4	Finite-Sample Performance of Some of the Tests	384
18.4	Some Related Statistical Inference Procedures	384
18.5	Illustrations and R Code from the <code>copula</code> Package	386
18.5.1	Bivariate Financial Logreturns	386
18.5.2	LOSS/ALAE Insurance Data	387
18.6	Testing the Maximum Domain of Attraction Condition	392
18.7	Open Questions and Ignored Difficulties	394
19	Extreme Risks of Financial Investments	399
	<i>Ye Liu and Jonathan A. Tawn</i>	
19.1	Introduction	399
19.2	Existing Methods	401
19.2.1	Extended Feller Theorem	401
19.2.2	Copula-Based Models and Their Extremal Features	403

19.3	Conditional Approach for Multivariate Extremes	404
19.3.1	Motivation	404
19.3.2	The Heffernan–Tawn Model	405
19.3.3	Handling Positive and Negative Returns	406
19.3.4	Hierarchical Factor Model	408
19.4	Diagnosis Methods for Portfolio Extremes	410
19.4.1	Pairwise Conditional Tail Test	410
19.4.2	Generalized Pareto Distribution Test	410
19.5	Examples	411
19.5.1	Simulated Data	411
19.5.2	Financial Data	413
20	Interplay of Insurance and Financial Risks with Bivariate Regular Variation	419
	<i>Qihe Tang and Zhongyi Yuan</i>	
20.1	Introduction	419
20.2	Ruin under the Interplay of Insurance and Financial Risks	421
20.2.1	A Discrete-Time Risk Model	422
20.2.2	Explorative Numerical Studies	422
20.3	Main Result	427
20.3.1	Bivariate Regular Variation	427
20.3.2	Main Result	428
20.4	Accuracy Examination	429
20.4.1	Gumbel Case	429
20.4.2	Mixture Case	430
20.5	Proof of Theorem 20.3.1	432
21	Weather and Climate Disasters	439
	<i>Richard W. Katz</i>	
21.1	Introduction	439
21.2	Extreme Weather and Climate Events	442
21.2.1	Extremal Characteristics	442
21.2.1.1	Block Maxima	442
21.2.1.2	Excess over High Threshold	443
21.2.1.3	Poisson-GP Model	444
21.2.2	Trends in Frequency and Intensity	445
21.2.3	Relationship to Covariates	447
21.3	Economic Damage	447
21.3.1	Damage from Individual Extreme Events	447
21.3.2	Total Damage as Random Sum	448
21.3.3	Trends	450
21.4	Damage Functions	450
21.4.1	Functional Form	450
21.4.1.1	Power Transform	450
21.4.1.2	Extreme Value Approach	453

21.4.2	Induced Damage Distribution	453
21.4.2.1	Penultimate Approximations	454
21.4.2.2	Application to Hurricane Damage	455
21.5	Discussion	456
21.6	Appendix	456
22	The Analysis of Safety Data from Clinical Trials	461
	<i>Ioannis Papastathopoulos and Harry Southworth</i>	
22.1	Safety Data from Clinical Trials	461
22.1.1	Introduction	461
22.1.2	The Importance of Extreme Values	462
22.2	Extreme Value Methods	464
22.2.1	Univariate Threshold Models	464
22.2.2	Dependence Modelling	465
22.3	An Illustrative Analysis	468
22.4	Discussion	472
23	Analysis of Bivariate Survival Data Based on Copulas with Log-Generalized Extreme Value Marginals	475
	<i>Dooti Roy, Vivekananda Roy, and Dipak Dey</i>	
23.1	Introduction	475
23.2	A Brief Overview of Copula	477
23.3	Marginal Distributions and Bivariate Survival Model	478
23.3.1	Generalized Extreme Value Distribution as Marginal	478
23.3.2	Bivariate Model	479
23.3.3	Model Settings	480
23.4	Proposed Methodology	480
23.4.1	A Two-Stage Importance Sampling Procedure	481
23.4.1.1	Estimation of r_k	482
23.5	Simulation Study	482
23.5.1	Generating Data	482
23.5.2	Estimation of Parameters	483
23.5.3	Note on Monte Carlo Simulation	484
23.5.4	Note on Implementation of the Algorithm	486
23.6	Application to Diabetes Retinopathy Study Data	487
23.7	Discussion	490
24	Change Point Analysis of Top Batting Average	493
	<i>Sy Han Chiou, Sangwook Kang, and Jun Yan</i>	
24.1	Introduction	494
24.2	Methods	495
24.2.1	Change Point Test	496
24.2.2	Smooth Change versus Jump Change	497
24.3	Data Analysis	498
24.3.1	Change Point Test	498

24.3.2	Smooth Change versus Jump Change	500
24.4	Simulation	501
24.5	Discussion	502
25	Computing Software	505
	<i>Eric Gilleland</i>	
25.1	Introduction	505
25.2	R Packages	506
25.3	Other Software	509
25.3.1	MATLAB [®]	509
25.3.2	S-Plus	509
25.3.3	Standalone Packages	510
25.4	Discussion	511
25.4.1	General Univariate Extreme Value Analysis	511
25.4.2	Multivariate Extreme Value Analysis	511
25.4.3	Finance	512
	Index	517
