Contents

| | |
|---------------------|-------------|
| <i>Contributors</i> | <i>ix</i> |
| <i>Preface</i> | <i>xiii</i> |

Feature Article

| | |
|---|-----------|
| 1. Metal-metal interactions in binuclear cyclopentadienylmetal carbonyls: Extending insight from experimental work through computational studies | 3 |
| R. Bruce King | |
| 1. Introduction | 4 |
| 2. Theoretical methods | 10 |
| 3. Binuclear cyclopentadienylmetal carbonyls of d-block metals | 12 |
| 4. Binuclear cyclopentadienylmetal carbonyls of the f-block metals | 25 |
| 5. Summary and outlook | 28 |
| Acknowledgment | 29 |
| References | 30 |
| 2. Novel aspects of element-element bonds in main group chemistry | 33 |
| Christina Poggel and Gernot Frenking | |
| 1. Introduction | 33 |
| 2. Beryllium complexes | 37 |
| 3. Group 14 compounds | 42 |
| 4. Group 15 compounds | 58 |
| 5. Summary | 69 |
| References | 69 |
| 3. The beryllium bond | 73 |
| M. Merced Montero-Campillo, Otilia Mó, Manuel Yáñez, Ibon Alkorta, and José Elguero | |
| 1. Introduction | 74 |
| 2. Organoberyllium compounds | 94 |
| 3. The beryllium bond | 96 |
| 4. Conclusions and outlook | 114 |
| Acknowledgments | 114 |
| References | 114 |

| | |
|--|------------|
| 4. Cation affinities throughout the periodic table | 123 |
| Zakaria Boughlala, Célia Fonseca Guerra, and F. Matthias Bickelhaupt | |
| 1. Introduction | 124 |
| 2. Energy decomposition analyses (EDA) | 125 |
| 3. Proton affinities of maingroup-element hydrides | 126 |
| 4. Alkyl cation affinities of maingroup-element hydrides | 137 |
| 5. Alkali metal cation affinities of anionic maingroup-element hydrides | 147 |
| 6. Conclusions and outlook | 154 |
| Acknowledgments | 155 |
| References | 156 |
| | |
| 5. Stacking interaction potential energy surfaces of square-planar metal complexes containing chelate rings | 159 |
| Jelena P. Blagojević Filipović, Michael B. Hall, and Snežana D. Zarić | |
| 1. Introduction | 160 |
| 2. Quantum chemical calculations | 162 |
| 3. Interaction energy calculations of stacking between benzene and metal chelate rings | 163 |
| 4. Stacking interactions between two chelate rings | 176 |
| 5. Conclusions and outlook | 186 |
| Acknowledgments | 187 |
| References | 187 |
| | |
| 6. Quantitative descriptors of electronic structure in the framework of molecular orbital theory | 191 |
| Serge I. Gorelsky | |
| 1. Introduction | 192 |
| 2. Electron population analysis | 192 |
| 3. Bond orders | 204 |
| 4. Transition metal complexes with metal-metal bonds | 210 |
| 5. Conclusions | 216 |
| Acknowledgments | 217 |
| References | 217 |
| | |
| 7. Toward accurate spin-state energetics of transition metal complexes | 221 |
| Mariusz Radoń | |
| 1. Introduction | 222 |
| 2. Advances in methodology | 223 |

| | |
|---|------------|
| 3. Challenges in spin-state prediction | 231 |
| 4. Mechanistic importance | 242 |
| 5. Benchmarking and environmental effects | 249 |
| 6. Conclusions | 258 |
| Acknowledgments | 259 |
| References | 259 |
| 8. Structure and bonding in endohedral transition metal clusters | 265 |
| Xiao Jin and John E. McGrady | |
| 1. Introduction | 266 |
| 2. Survey of experimental data | 267 |
| 3. Models of cluster electronic structure | 272 |
| 4. Methodology | 273 |
| 5. The emergence of paramagnetism: $[\text{Mn}@\text{Pb}_{12}]^{3-}$ and $[\text{Mn}@\text{Si}_{12}]^+$ | 281 |
| 6. The 10-vertex family, $\text{M}@\text{E}_{10}$ | 288 |
| 7. The 14-vertex family, $\text{M}@\text{E}_{14}$ | 292 |
| 8. Summary and future perspectives | 298 |
| Acknowledgments | 301 |
| References | 301 |
| 9. Molecular modeling of transition metal and rare earth coordination compounds | 305 |
| Peter Comba and Bodo Martin | |
| 1. Introduction | 306 |
| 2. Molecular properties based on MM-derived structures | 309 |
| 3. Interpretation and prediction of SMM properties by <i>ab initio</i> calculations | 311 |
| 4. Computational analysis of high-valent nonheme iron complexes | 314 |
| 5. Conclusions | 317 |
| Acknowledgments | 318 |
| References | 318 |
| 10. Bifunctional aliphatic PNP pincer catalysts for hydrogenation: Mechanisms and scope | 323 |
| Zhihong Wei and Haijun Jiao | |
| 1. Introduction | 324 |
| 2. Coordination chemistry of pincer complex | 326 |
| 3. Hydrogenation reactions and mechanism | 342 |
| 4. Conclusion | 377 |
| Acknowledgments | 380 |
| References | 381 |

| | |
|---|------------|
| 11. Schrock vs Fischer carbenes: A quantum chemical perspective | 385 |
| Joonghee Won, Hoimin Jung, Manoj V. Mane, Joon Heo, Seongyeon Kwon, and Mu-Hyun Baik | |
| 1. Introduction | 386 |
| 2. Computational studies on Schrock carbene: Olefin metathesis and C–X activation | 404 |
| 3. Titanium alkylidyne: Super Schrock carbyne generated from Schrock carbene | 413 |
| 4. Computational studies on the Fischer type metathesis catalysts | 424 |
| 5. Conclusions and outlook | 435 |
| Acknowledgment | 436 |
| References | 436 |
| 12. Prediction of ion selectivity by quantum chemical calculations X: A recent (personal) review | 445 |
| Ralph Puchta, Svetlana Begel, and Rudi van Eldik | |
| 1. Introduction | 446 |
| 2. Applied quantum chemical methods | 449 |
| 3. Concept | 450 |
| 4. Results and discussion | 456 |
| 5. Conclusions | 496 |
| 6. Outlook | 498 |
| Acknowledgments | 499 |
| References | 499 |
| 13. Molecular simulations of crystal growth: From understanding to tailoring | 507 |
| Patrick Duchstein, Philipp Ectors, and Dirk Zahn | |
| 1. Introduction | 508 |
| 2. Fundamental theory of crystal nucleation and growth | 509 |
| 3. Explicit molecular simulations of crystal growth | 519 |
| 4. Conclusions and outlook | 527 |
| Acknowledgments | 528 |
| References | 528 |
| <i>Index</i> | 531 |
