<i>Preface</i>	v
<i>About the Editor-in-Chief</i>	vii
<i>List of Contributors</i>	ix
Chapter 1. Flow Boiling and Condensation within an Ultra-Compact Microchannel Heat Exchanger	1
<i>Raffaele L. Amalfi, Nicolas Lamaison, Jackson B. Marcinichen and John R. Thome</i>	
1. Introduction	2
2. Experimental Apparatus	4
2.1. Test facility	5
2.1.1. Refrigerant loop	5
2.1.2. Water loop	9
2.2. Test section	13
3. Experimental Procedure	15
4. Data Reduction	19
5. Uncertainty Analysis	23
6. Single-Phase Results	25
6.1. Pressure drop	25
6.2. Energy balance	28
6.3. Heat transfer	30
7. Two-Phase Results	34
7.1. Effect of mass flux	34
7.2. Effect of saturation temperature	37
7.3. Effect of fluid	37
7.4. Effect of primary against secondary side	40
7.5. Effect of flow arrangement	42
7.6. Effect of heat transfer mechanism	44
7.7. Effect of flow direction	44

8. Simulation Code	47
8.1. Introduction	47
8.2. Implementation of the code	48
8.3. Experimental validation	51
9. Conclusions	56
Acknowledgments	57
Nomenclature	58
References	60

Chapter 2. Phase Separation Microfluidics for Heat Transfer Applications **63**

James W. Palko, Hyounghoon Lee, Chirag R. Kharangate, Ki Wook Jung, Mehdi Asheghi and Kenneth E. Goodson

1. Introduction	63
2. Mechanisms of Phase Separation	65
3. Microfluidic Phase Separation Elements	66
3.1. Body forces	67
3.2. Inertial forces	67
3.3. Capillary forces	67
3.3.1. Patterned heterogeneous surface chemistry for wetting control	68
3.3.2. Wicks	70
3.3.3. Liquid-phobic membranes	72
4. Applications to Phase-Change Heat Transfer	74
4.1. Flow boiling in microchannels	75
4.1.1. Vapor venting in fractal networks	75
4.1.2. Vapor venting microchannel heat exchanger in flow boiling using a hydrophobic membrane separator	76
4.1.3. Phase separation in flow boiling using microstructured outlets	79
4.2. Boiling in porous media	81
4.2.1. Hydrophobic membrane phase separation integrated with silicon microstructures	82
4.2.2. Hydrophobic membrane phase separation applied to existing porous copper structures	84
5. Conclusion and Future Directions	85
Nomenclature	87
References	87

**Chapter 3. Experimental Study and Modeling of Flow Boiling
in Tube in Normal and Microgravity Conditions 93**

Catherine Colin and Marine Narcy

1.	Introduction	93
2.	Experimental Set-Up	95
2.1.	Hydraulic loop	95
2.2.	Test section	96
2.3.	Microgravity conditions	98
3.	Measurement Techniques and Accuracy	99
3.1.	Flow parameters and heat flux	99
3.2.	Pressure measurements	100
3.3.	Temperature measurements	101
3.3.1.	Absolute temperature	101
3.3.2.	Differential temperature	101
3.4.	Void fraction	102
3.4.1.	Measurement principle	102
3.4.2.	Sensor design and features	103
3.4.3.	Calibration	103
3.4.4.	Global accuracy	104
3.5.	Flow visualization	106
4.	Data Reduction	106
4.1.	Vapor quality	106
4.1.1.	Saturated regimes	107
4.1.2.	Subcooled regimes	108
4.2.	Wall shear stress	109
4.2.1.	Expressions of the wall shear stress	109
4.2.2.	Uncertainty	109
4.2.3.	Experimental validation	110
4.3.	Interfacial shear stress	110
4.4.	Heat transfer coefficient	110
4.4.1.	Expression of the heat transfer coefficient	111
4.4.2.	Uncertainty	112
4.4.3.	Experimental validation	112
5.	Experimental Results	113
5.1.	Flow patterns	113
5.1.1.	Flow visualizations	113
5.1.2.	Flow pattern maps	116
5.1.3.	Transitions	117

5.2.	Void fraction and liquid film thickness	119
5.2.1.	Mean gas velocity	119
5.2.2.	Film thickness in annular flow	119
5.3.	Pressure drop and shear stresses	121
5.3.1.	Total pressure drop	121
5.3.2.	Wall shear stress	123
5.3.3.	Interfacial shear stress	125
5.3.4.	Balance of physical quantities	130
5.4.	Heat transfer coefficient	130
6.	Conclusions	133
	References	136

Chapter 4. Wire-Mesh Sensors and Cognate Measuring Techniques **139**

Horst-Michael Prasser

1.	Introduction	139
2.	Identification of Fluid Phases Using the Electrical Impedance	141
3.	Previous Work	144
3.1.	First proposal for a holdup measurement using a wire-mesh sensor	144
3.2.	Wire-mesh sensors based on tomographic image reconstruction	147
4.	High-Resolution Wire-Mesh Sensors Based on Conductivity	149
4.1.	Signal acquisition concept	149
4.1.1.	Suppression of crosstalk	149
4.1.2.	Suppression of electrolysis effects at the electrodes	152
4.1.3.	Suppression of low frequency noise	153
5.	Wire-Mesh Sensors Based on Capacity and Complex Impedance	154
5.1.	Signal acquisition concept	154
6.	Design of Wire-Mesh Sensors	156
6.1.	Sensors for air–water flows at ambient conditions	156
6.2.	Sensors for experiments with water hammers	164
6.3.	Wire-mesh sensors for steam–water flow at elevated temperatures and pressures	167
6.3.1.	Pressure resistant electrode sealing	167
6.3.2.	Non-pressurized sensor installed in a pressure-proof cavity	171
6.4.	Solutions of other groups	172

7.	Signal Processing for Measurements in Gas–Liquid	
	Two-Phase Flow	174
7.1.	Conversion of primary measuring information into phase holdup	174
	7.1.1. Potential field calculations	174
	7.1.2. Experimental evidence	180
	7.1.3. Filtering and correction methods	186
7.2.	Visualization techniques	188
7.3.	Profiles of time-averaged gas fractions and their RMS	189
7.4.	Bubble identification and bubble size distributions	191
	7.4.1. Bubble identification	191
	7.4.2. Determination of bubble size and shape parameters	198
	7.4.3. Statistical evaluation, bubble size distributions	201
	7.4.4. Decomposition of gas fractions into bubble size classes	203
7.5.	Velocity of the gas–liquid interface	204
	7.5.1. Cross-correlation methods	204
	7.5.2. Time-of-flight detection	208
	7.5.3. Liquid velocity profiles using marker bubbles	210
	7.5.4. Estimates of lateral bubble velocity components	216
7.6.	Interfacial area concentration	217
	7.6.1. Interface reconstruction	217
	7.6.2. IAD obtained from the local gas fraction gradient	221
8.	Single-Phase Mixing Studies	223
8.1.	Use of salt tracers	223
8.2.	Indirect temperature measurement	230
8.3.	Temperature measurement in a gas flow using thermistors	233
9.	Electric Liquid Film Thickness Sensors	236
9.1.	Concept	236
9.2.	Sensor design	238
	9.2.1. Simple electrode matrix on a flat sensor	238
	9.2.2. Sensor characteristic and optimization of the electrode shape	238
	9.2.3. Bent sensors on cylindrical surfaces	242
	9.2.4. Multilayer sensors	243
	9.2.5. Pairs of sensors on opposite walls of a narrow channel	244
	9.2.6. Miniaturized liquid film thickness sensors	247
9.3.	Signal processing	250
	9.3.1. Conversion of conductance in liquid film thickness	250

9.3.2. Wave analysis	252
9.3.3. Liquid phase velocity and turbulent dispersion	253
9.3.4. Droplet deposition	254
10. Summary and Outlook	257
References	259
Chapter 5. Wetting on Anisotropic Surfaces	265
<i>Xiaofei Wang, Md Ashiqur Rahman and Anthony M. Jacobi</i>	
1. Introduction	265
2. Manipulation of Surface Wettability	266
3. Fabrication Approaches for Anisotropic Surfaces	271
4. Anisotropic Wetting and Droplet Motion on Microgrooved Surfaces	274
5. Effects of Wettability on Condensation and Frost Formation	278
6. Summary	286
References	287
Chapter 6. Two-Phase Flow and Boiling in Micro/Minichannels and Microfin Tubes	293
<i>Wei Li, Zhi-chuan Sun and Jingzhi Zhang</i>	
1. Introduction	293
2. Criterion for Evaporative Heat Transfer in Micro/Minichannels	295
3. Correlations for Evaporative Heat Transfer in Micro/Minichannels	297
4. Correlations for Pressure Drop in Micro/Minichannels	301
5. Correlations for Critical Heat Flux in Micro/Minichannels	305
5.1. Region I: $L_h/d_{he} \leq 150$, $BoRe_l^{0.5} \leq 200$ (726 data points)	307
5.2. Region II: $L_h/d_{he} > 150$, $BoRe_l^{0.5} \leq 200$ (133 data points)	308
6. Correlations for Evaporative Heat Transfer in Microfin Tubes	310
7. Frictional Pressure Drop During Condensation in Microfin Tubes	316
8. Theoretical and Numerical Studies of Convective Condensation Flows in Microfin Tubes	319
8.1. Theoretical study of film condensation in horizontal microfin tubes	320
8.2. Numerical study of condensation in horizontal microfin tubes	323
9. Future Work	328
10. Summary	328
Nomenclature	329
References	331
