

Contents

1. SECOND-ORDER DIFFERENTIAL EQUATIONS IN THE PHASE PLANE	1
1.1. Phase diagram for the pendulum equation	1
1.2. Autonomous equations in the phase plane	5
1.3. Conservative systems	10
1.4. The damped linear oscillator	12
1.5. Nonlinear damping	17
1.6. Some applications	20
1.7. Parameter-dependent conservative systems	25
Exercises	29
2. FIRST-ORDER SYSTEMS IN TWO VARIABLES AND LINEARIZATION	36
2.1. The general phase plane	36
2.2. Some population models	39
2.3. Linear approximation at equilibrium points	43
2.4. Linear systems in matrix form	53
Exercises	56
3. GEOMETRICAL AND COMPUTATIONAL ASPECTS OF THE PHASE DIAGRAM	67
3.1. The index of a point	67
3.2. The index at infinity	76
3.3. The phase diagram at infinity	78
3.4. Limit cycles and other closed paths	83
3.5. Computation of the phase diagram	86
Exercises	90
4. AVERAGING METHODS	100
4.1. An energy-balance method for limit cycles	100
4.2. Amplitude and frequency estimates	104
4.3. Slowly-varying amplitude; nearly periodic solutions	107
4.4. Periodic solutions: harmonic balance	111
4.5. The equivalent linear equation by harmonic balance	112
4.6. Accuracy of a period estimate	115
Exercises	117
5. PERTURBATION METHODS	124
5.1. Outline of the direct method	124
5.2. Forced oscillations far from resonance	126

5.3.	Forced oscillations near resonance with weak excitation	127
5.4.	The amplitude equation for the undamped pendulum	130
5.5.	The amplitude equation for a damped pendulum	133
5.6.	Soft and hard springs	134
5.7.	Amplitude-phase perturbation for the pendulum equation	138
5.8.	Periodic solutions of autonomous equations (Lindstedt's method)	140
5.9.	Forced oscillation of a self-excited equation	142
5.10.	The perturbation method and Fourier series	144
	Exercises	146
6.	SINGULAR PERTURBATION PROBLEMS	150
6.1.	Non-uniform approximation to functions on an interval	150
6.2.	Coordinate perturbation (renormalization)	152
6.3.	Lighthill's method	157
6.4.	Multiple time scales (two-timing)	159
6.5.	Matching approximations on an interval	164
6.6.	A matching technique for differential equations	169
	Exercises	172
7.	FORCED OSCILLATIONS: HARMONIC AND SUB-HARMONIC RESPONSE, STABILITY, ENTRAINMENT	178
7.1.	General forced periodic solutions	178
7.2.	Harmonic solutions, transients, and stability for Duffing's equation	180
7.3.	The jump phenomenon	187
7.4.	Harmonic oscillations, stability, and transients for the forced van der Pol equation	189
7.5.	Frequency entrainment for the van der Pol equation	194
7.6.	Comparison of the theory with computations	197
7.7.	Subharmonics of Duffing's equation by perturbation	198
7.8.	Stability and transients for subharmonics of Duffing's equation	203
7.9.	Entrainment by periodic stimuli	208
	Exercises	212
8.	LINEAR SYSTEMS	219
8.1.	Structure of solutions of the general linear system	219
8.2.	The system with constant coefficients	226
8.3.	Equations with periodic coefficients (Floquet theory)	231

8.4.	The Wronskian	235
8.5.	Hill's and Mathieu's equations	237
8.6.	Transition curves for Mathieu's equation by perturbation	242
8.7.	Mathieu's equation with damping	244
	Exercises	246
9.	STABILITY	251
9.1.	Poincaré stability	253
9.2.	Solutions, paths, and norms	258
9.3.	Liapunov stability (stability of solutions)	262
9.4.	Stability of linear systems	265
9.5.	Stability of a class of linear systems	270
9.6.	A comparison theorem for the zero solutions of nearly-linear systems	273
9.7.	The stability of forced oscillations by solution-perturbation	276
	Exercises	278
10.	LIAPUNOV FUNCTIONS	283
10.1.	Liapunov's direct method	283
10.2.	Liapunov functions	286
10.3.	A test for instability	291
10.4.	Stability and the linear approximation in two dimensions	292
10.5.	Exponential function of a matrix	300
10.6.	Stability and the linear approximation for n th order autonomous systems	302
10.7.	Miscellaneous problems	308
	Exercises	312
11.	THE EXISTENCE OF PERIODIC SOLUTIONS	320
11.1.	The Poincaré–Bendixson theorem	321
11.2.	A theorem on the existence of a centre	329
11.3.	A theorem on the existence of a limit cycle	333
11.4.	Van der Pol's equation with large parameter	339
	Exercises	342
	APPENDIX A: Existence and uniqueness theorems	345
	APPENDIX B: Hints and answers to the exercises	348
	BIBLIOGRAPHY	355
	INDEX	357
