

Contents

1	Introduction	1
1.1	Real or Complex?	2
1.2	Structure of the Book	3
1.3	The Nearby Stable Object.....	6
1.4	Exercises and Open Questions.....	10
1.5	Notation.....	10
Part I Thom-Mather Theory: Right-Left Equivalence, Stability, Versal Unfoldings, Finite Determinacy		
2	Manifolds and Smooth Mappings	13
2.1	Germes	13
2.2	Manifolds and Their Tangent Spaces.....	15
2.3	Inverse Mapping Theorem and Consequences	24
2.4	Submanifolds	29
2.5	Vector Fields and Flows.....	32
2.6	Transversality	40
2.7	Local Conical Structure	44
3	Left-Right Equivalence and Stability	45
3.1	Classification of Functions by Right Equivalence	46
3.2	Left-Right Equivalence and Stability.....	58
	3.2.1 Right Equivalence and Left Equivalence	71
3.3	First Calculations	74
3.4	Multi-Germes	81
	3.4.1 Notation	81
3.5	Infinitesimal Stability Implies Stability	88
3.6	Stability of Multi-Germes	92
4	Contact Equivalence	97
4.1	The Contact Tangent Space	97
4.2	Using $T\mathcal{H}_ef$ to Calculate $T\mathcal{A}_ef$	102

4.3	Construction of Stable Germs as Unfoldings	105
4.4	Contact Equivalence	108
4.5	Geometric Criterion for Finite \mathcal{A}_e -Codimension	116
4.5.1	Sheafification	117
4.6	Transversality	122
4.7	Thom–Boardman Singularities	128
5	Versal Unfoldings	141
5.1	Versality	142
5.2	Global Stability of C^∞ Mappings	156
5.2.1	Stable Maps Are Not Always Dense	158
5.2.2	Mather’s Nice Dimensions	160
5.3	Topological Stability	162
5.4	Bifurcation Sets	163
5.5	The Notion of Stable Perturbation of a Map-Germ	176
6	Finite Determinacy	181
6.1	Proof of the Finite Determinacy Theorem	184
6.2	Estimates for the Determinacy Degree	191
6.3	Determinacy and Unipotency	200
6.3.1	Unipotent Affine Algebraic Groups	204
6.3.2	Unipotent Groups of k -Jets of Diffeomorphisms	206
6.3.3	When Is a Closed Affine Space of Germs Contained in a \mathcal{G} -Orbit?	209
6.3.4	Complexification and Determinacy Degrees	209
6.3.5	Notes	209
6.4	Complete Transversals	210
6.5	Notes and Further Developments	215
7	Classification of Stable Germs by Their Local Algebras	217
7.1	Stable Germs Are Classified by Their Local Algebras	217
7.2	Construction of Stable Germs as Unfoldings	223
7.3	The Isosingular Locus	227
7.3.1	Weighted Homogeneity and Local Quasihomogeneity ...	231
7.4	Quasihomogeneity and the Nice Dimensions	232
7.4.1	Multi-Germs	235
7.4.2	The Case $\mathbf{n} \geq \mathbf{p}$	236
7.4.3	The Case $\mathbf{n} < \mathbf{p}$	238
Part II Images and Discriminants: The Topology of Stable Perturbations		
8	Stable Images and Discriminants	253
8.1	Introduction	253
8.1.1	Complex Not Real	258
8.2	Review of the Milnor Fibre	259

8.3	The Homotopy Type of the Discriminant of a Stable Perturbation: Discriminant and Image Milnor Numbers	261
8.4	Finding $T_{\mathcal{A}_e}^1 f$ in the Geometry of f : Maps from n -Space to $n + 1$ -Space	269
	8.4.1 The Conductor Ideal	275
8.5	Finding $T_{\mathcal{A}_e}^1 f$ in the Geometry of f : Sections of Stable Discriminants and Images	279
	8.5.1 Critical Space and Discriminant	283
8.6	Bifurcation Sets	289
8.7	Calculating the Discriminant Milnor Number	292
8.8	Image Milnor Number and \mathcal{A}_e -Codimension	298
8.9	Further Developments	299
	8.9.1 Almost Free Divisors	299
	8.9.2 Thom Polynomial Techniques	300
	8.9.3 Does μ_Δ Constant Imply Topological Triviality?	300
	8.9.4 The Milnor–Tjurina Relation	300
	8.9.5 Augmentation and Concatenation: New Germs from Old	301
9	Multiple Points	303
	9.1 Introduction	303
	9.2 Choosing the Right Definition	304
	9.2.1 Semi-Simplicial Spaces	311
	9.2.2 When Is $D_{cl}^k(f)$ Reduced?	312
	9.2.3 Irritating Notation, Occasionally Necessary	312
	9.2.4 Equations or Procedures?	315
	9.3 Expected Dimension	315
	9.4 Equations for $D^2(f)$	320
	9.5 Equations for $D^k(f)$ When f Is a Corank 1 Germ	327
	9.5.1 Generalities on Functions of One Variable	327
	9.5.2 Application to Multiple Points	333
	9.6 Bifurcation Sets for Germs of Corank 1	341
	9.7 Disentangling a Singularity: The Geometry of a Stable Perturbation	345
	9.8 Blowing-Up Multiple Points	351
	9.8.1 Construction of an Ambient Space for K_k	352
	9.8.2 Construction of $K_k(f)$ as Subspace of $B_k(X)$	355
	9.9 What Remains To Be Done	366
10	Calculating the Homology of the Image	369
	10.1 The Alternating Chain Complex	370
	10.1.1 Motivation	373
	10.2 The Image Computing Spectral Sequence	380
	10.2.1 Towards the ICSS	384
	10.2.2 The Filtrations	385

10.2.3	The Spectral Sequence of a Filtered Complex	385
10.2.4	The Spectral Sequences Arising from the Two Filtrations on the Total Complex of the Double Complex.....	386
10.3	Finite Simplicial Maps	389
10.3.1	Triangulating $D^k(f)$	391
10.3.2	$(C_n^{\text{Alt}}(D^\bullet(f)), \epsilon_\#^\bullet)$ Is a Resolution of $C_n(Y)$	394
10.4	Finite Complex Maps Are Triangulable.....	398
10.5	Other Proofs	399
10.6	Cohomology	399
10.7	Examples and Applications of the ICSS	402
10.7.1	The Reidemeister Moves	403
10.7.2	Reidemeister I	403
10.7.3	Reidemeister II.....	404
10.7.4	Reidemeister III.....	405
10.7.5	Map-Germs of Multiplicity 2	406
10.7.6	Codimension 1 Corank 1 Germs	409
10.7.7	Generalised Mayer–Vietoris	410
10.7.8	Relation Between AH_* and H_*	411
10.7.9	Exercises for Sect. 10.7	411
10.8	Open Questions.....	412
11	Multiple Points in the Target: The Case of Parameterised Hypersurfaces	413
11.1	Finding a Presentation	414
11.1.1	Using <i>Macaulay2</i> to Find a Presentation	418
11.2	Fitting Ideals and Multiple Points in the Target.....	421
11.2.1	Are the Fitting Ideal Spaces $M_k(f)$ Cohen–Macaulay?	428
11.3	Double Points in the Target	431
11.4	\mathcal{A}_e -Codimension and Image Milnor Number of Map-Germs $(\mathbb{C}^n, S) \rightarrow (\mathbb{C}^{n+1}, 0)$	436
11.5	The Rank Condition	442
11.6	Corank 1 Mappings: Cyclic Extensions	447
11.7	Duality and Symmetric Presentations	451
11.7.1	Gorenstein Rings and Symmetric Presentations	455
11.7.2	Geometrical Interpretation of the Trace Homomorphism	458
11.8	Triple Points in the Target	462
A	Jet Spaces and Jet Bundles	469
B	Stratifications	477
B.1	Stratification of Sets	477
B.2	Stratification of Mappings	481
B.3	Semialgebraic Sets	483

C	Background in Commutative Algebra	489
C.1	Spaces and Functions on Spaces.....	489
C.2	Associated Primes	493
C.3	Dimension, Depth and Cohen–Macaulay Modules	495
C.3.1	Krull Dimension	495
C.3.2	Slicing Dimension	496
C.3.3	Hilbert–Samuel Dimension	498
C.3.4	Weierstrass Dimension	498
C.3.5	The Hauptidealsatz	498
C.3.6	Depth and Cohen–Macaulay Modules.....	500
C.4	Free Resolutions.....	503
C.4.1	Cohen–Macaulay Modules and Freeness.....	504
C.4.2	Examples of Cohen–Macaulay Spaces	505
C.5	Pulling Back Algebraic Structures	508
C.6	Samuel Multiplicity	513
D	Local Analytic Geometry	517
D.1	The Preparation Theorem	517
D.2	Local Properties of Analytic Sets and Finite Mappings	521
D.3	Degree and Multiplicity	525
D.4	Normalisation of Analytic Set-Germs.....	528
D.4.1	Extension Theorems.....	531
D.4.2	Normalisation	532
E	Sheaves	537
E.1	Presheaves and Sheaves	537
E.2	Coherence.....	541
E.3	Conservation of Multiplicity	545
E.3.1	Representatives	545
E.4	Conservation of Multiplicity II	549
	References	553
	Index	563
