Preface	<i>page vii</i>
Acknowledgements	xi
1 The Central Problem of Genetic Epistemology Overview of the system, Piaget's position in epistemology in the first half of the twentieth century. His main problem is the reconciliation of development with logico-mathematics.	1
2 Structures, Operations and Groups' in Piaget's System: A Preliminary Survey Action, operations and groups. The roots of Piaget's conflation of logico-mathematics and Actuality revealed through his use of Group Theory.	31
Appendix to Chapter 2	55
3 Mathematical Structures of the Concrete Operational Stage The role of the mathematical group at the concrete operational stage. Groupings of classes and relations. Implications with respect to conflation.	59
Appendices to Chapter 3	76
4 Mathematical Structures of the Formal Operational Stage The formal operational stage. Lattices and the INRC group. Studies of the balance experiment. Conclusions with respect to the relation of cognition to Actuality.	91
Appendices to Chapter 4	116
5 The Equilibrium Model of Cognition The relation of equilibrium and reversibility as a defining feature of cognition.	126
6 Equilibration I. The Apparatus of Cognition Separate studies of cognitive structural theory in respect of action.	156

7	Equilibration II. Cognitive Growth	<i>page</i> 198
	A further look at the problem of reconciling genesis, novelty and logico-mathematics (via the transition from the external to the internal world). Summary of the system as a whole.	
8	Problems of Logic and Mathematics	220
	The Piagetian system in the context of a discussion of the background and contemporary situation in logic and mathematics.	
9	Scientific Method and the Piagetian System	283
	Consideration of the scientific claims of the system. The differences between a genuine symbolism and a descriptive sign system.	
10	Epilogue	312
	Some indications of the wider significance of the Piagetian system.
