

Contents

1	Introduction	1
1.1	Deterministic Maxwell Equations	1
1.1.1	Boundary and Interface Conditions	3
1.1.2	Intrinsic Properties	5
1.1.3	Numerical Algorithms	11
1.2	Stochastic Maxwell Equations	16
1.2.1	Formulation of Noises	17
1.2.2	Two Polarizations	20
1.2.3	Time-Harmonic Stochastic Maxwell Equations	21
1.3	Applications of Stochastic Maxwell Equations	22
1.3.1	Inverse Random Source Problems.....	22
1.3.2	Thermal Radiation	23
2	Solution Theory of Stochastic Maxwell Equations	27
2.1	Preliminaries.....	27
2.2	Well-Posedness	33
2.2.1	Globally Lipschitz Continuous Case	33
2.2.2	Non-globally Lipschitz Continuous Case	38
2.3	Regularity of the Solution.....	47
2.3.1	$\mathcal{D}(M^k)$ -Regularity	47
2.3.2	H^k -Regularity	51
2.4	Differentiability with Respect to the Initial Datum	56
3	Intrinsic Properties of Stochastic Maxwell Equations	63
3.1	Infinite-Dimensional Stochastic Symplectic Structure	63
3.2	Stochastic Multi-Symplectic Structure	69
3.3	Physical Properties	75
3.4	Small Noise Asymptotics	78
3.5	Intrinsic Properties for the Damped Case	82

3.5.1	Energy Evolution Law	83
3.5.2	Stochastic Conformal Multi-Symplectic Conservation Law	84
3.5.3	Ergodicity	86
4	Structure-Preserving Algorithms for Stochastic Maxwell Equations	97
4.1	Temporally Semi-Discrete Algorithms	98
4.1.1	Stochastic Symplectic Runge–Kutta Methods	98
4.1.2	Exponential-Type Methods	120
4.2	Fully Discrete Algorithms	124
4.2.1	Stochastic Multi-Symplectic Algorithms	125
4.2.2	Stochastic Multi-Symplectic Wavelet Algorithm	137
4.2.3	Stochastic Multi-Symplectic Discontinuous Galerkin Algorithms	144
4.2.4	Stochastic Conformal Multi-Symplectic and Ergodic Algorithm	159
4.3	Splitting Techniques for Stochastic Maxwell Equations	166
5	Convergence Analysis of Structure-Preserving Algorithms for Stochastic Maxwell Equations	173
5.1	Convergence Analysis for Temporally Semi-Discrete Algorithms ...	173
5.1.1	Stochastic Midpoint Method	174
5.1.2	Stochastic Symplectic Runge–Kutta Methods	185
5.1.3	Exponential-Type Methods	191
5.2	Convergence Analysis for Fully Discrete Algorithms	199
5.2.1	Error Estimate of the Spatial Semi-Discretization	200
5.2.2	Error Estimate of the Full Discretization	203
5.3	Convergence Analysis for Splitting Algorithms	207
5.3.1	Splitting Error	207
5.3.2	Error of the Splitting Midpoint Method	210
6	Implementation of Numerical Experiments	215
6.1	MATLAB Codes for Wiener Processes	215
6.1.1	Standard Brownian Motion	216
6.1.2	Q -Wiener Process	218
6.2	Numerical Experiments for Structure-Preserving Algorithms	220
6.2.1	Stochastic Multi-Symplectic Algorithms	221
6.2.2	Stochastic Multi-Symplectic Wavelet Algorithm	231
6.2.3	Splitting Midpoint Method	239
A	Basic Identities and Inequalities	245
A.1	Basic Identities	245
A.2	Basic Inequalities	246

B Semigroup, Sobolev Space, and Differential Calculus	249
B.1 Operator Semigroup	249
B.2 Sobolev Space	250
B.3 Fréchet and Gâteaux Derivatives	253
C Estimates Related to Maxwell Operators	255
D Some Results of Stochastic Partial Differential Equations	267
D.1 Hilbert Space Valued Wiener Process	267
D.2 Hilbert–Schmidt Operator.....	268
D.3 Properties of the Stochastic Integral	269
D.4 Solutions of Stochastic Partial Differential Equations	272
References	275
