

# Table of Contents

<b>1. Introduction</b> .....	1
1.1 The Green Representation Formula .....	1
1.2 Boundary Potentials and Calderón's Projector .....	3
1.3 Boundary Integral Equations .....	10
1.3.1 The Dirichlet Problem .....	11
1.3.2 The Neumann Problem .....	12
1.4 Exterior Problems .....	13
1.4.1 The Exterior Dirichlet Problem .....	13
1.4.2 The Exterior Neumann Problem .....	15
1.5 Remarks .....	19
<b>2. Boundary Integral Equations</b> .....	25
2.1 The Helmholtz Equation .....	25
2.1.1 Low Frequency Behaviour .....	31
2.2 The Lamé System .....	45
2.2.1 The Interior Displacement Problem .....	47
2.2.2 The Interior Traction Problem .....	55
2.2.3 Some Exterior Fundamental Problems .....	56
2.2.4 The Incompressible Material .....	61
2.3 The Stokes Equations .....	62
2.3.1 Hydrodynamic Potentials .....	65
2.3.2 The Stokes Boundary Value Problems .....	66
2.3.3 The Incompressible Material — Revisited .....	75
2.4 The Biharmonic Equation .....	79
2.4.1 Calderón's Projector .....	83
2.4.2 Boundary Value Problems and Boundary Integral Equations .....	86
2.5 Remarks .....	91
<b>3. Representation Formulae</b> .....	95
3.1 Classical Function Spaces and Distributions .....	95
3.2 Hadamard's Finite Part Integrals .....	101
3.3 Local Coordinates .....	108
3.4 Short Excursion to Elementary Differential Geometry .....	111

3.4.1	Second Order Differential Operators in Divergence Form	119
3.5	Distributional Derivatives and Abstract Green's Second Formula	126
3.6	The Green Representation Formula	130
3.7	Green's Representation Formulae in Local Coordinates	135
3.8	Multilayer Potentials	139
3.9	Direct Boundary Integral Equations	145
3.9.1	Boundary Value Problems	145
3.9.2	Transmission Problems	155
3.10	Remarks	157
<b>4.</b>	<b>Sobolev Spaces</b>	<b>159</b>
4.1	The Spaces $H^s(\Omega)$	159
4.2	The Trace Spaces $H^s(\Gamma)$	169
4.2.1	Trace Spaces for Periodic Functions on a Smooth Curve in $\mathbb{R}^2$	181
4.2.2	Trace Spaces on Curved Polygons in $\mathbb{R}^2$	185
4.3	The Trace Spaces on an Open Surface	189
4.4	Weighted Sobolev Spaces	191
4.5	Function Spaces $\mathbf{H}(\text{div}, \Omega)$ and $\mathbf{H}(\text{curl}, \Omega)$	194
<b>5.</b>	<b>Variational Formulations</b>	<b>207</b>
5.1	Partial Differential Equations of Second Order	207
5.1.1	Interior Problems	212
5.1.2	Exterior Problems	216
5.1.3	Transmission Problems	227
5.2	Abstract Existence Theorems for Variational Problems	231
5.2.1	The Lax–Milgram Theorem	232
5.3	The Fredholm–Nikolski Theorems	238
5.3.1	Fredholm's Alternative	238
5.3.2	The Riesz–Schauder and the Nikolski Theorems	248
5.3.3	Fredholm's Alternative for Sesquilinear Forms	252
5.3.4	Fredholm Operators	254
5.4	Gårding's Inequality for Boundary Value Problems	255
5.4.1	Gårding's Inequality for Second Order Strongly Elliptic Equations in $\Omega$	255
5.4.2	The Stokes System	263
5.4.3	Gårding's Inequality for Exterior Second Order Problems	266
5.4.4	Gårding's Inequality for Second Order Transmission Problems	271
5.5	Existence of Solutions to Boundary Value Problems	272
5.5.1	Interior Boundary Value Problems	272
5.5.2	Exterior Boundary Value Problems	276
5.5.3	Transmission Problems	277

5.6	Solution of Integral Equations via Boundary Value Problems .	277
5.6.1	The Generalized Representation Formula for Second Order Systems . . . . .	277
5.6.2	Continuity of Some Boundary Integral Operators . . . . .	280
5.6.3	Continuity Based on Finite Regions . . . . .	282
5.6.4	Continuity of Hydrodynamic Potentials . . . . .	284
5.6.5	The Equivalence Between Boundary Value Problems and Integral Equations . . . . .	287
5.6.6	Variational Formulation of Direct Boundary Integral Equations . . . . .	289
5.6.7	Positivity and Contraction of Boundary Integral Op- erators . . . . .	300
5.6.8	The Solvability of Direct Boundary Integral Equations	304
5.6.9	Positivity of the Boundary Integral Operators of the Stokes System . . . . .	305
5.7	Partial Differential Equations of Higher Order . . . . .	307
5.8	Remarks . . . . .	312
5.8.1	Assumptions on $\Gamma$ . . . . .	312
5.8.2	Higher Regularity of Solutions . . . . .	313
5.8.3	Mixed Boundary Conditions and Crack Problem . . . . .	314
<b>6.</b>	<b>Electromagnetic Fields . . . . .</b>	<b>317</b>
6.1	Introduction . . . . .	317
6.2	Maxwell Equations . . . . .	318
6.3	Constitutive Equations . . . . .	319
6.4	Time Harmonic Fields . . . . .	323
6.4.1	Plane waves . . . . .	324
6.5	Electromagnetic potentials . . . . .	325
6.6	Transmission and Boundary Conditions . . . . .	328
6.7	Boundary Value Problems . . . . .	329
6.7.1	Scattering problems . . . . .	329
6.7.2	Eddy current problems . . . . .	330
6.8	Uniqueness . . . . .	332
6.8.1	The cavity problem . . . . .	332
6.8.2	Exterior problems . . . . .	337
6.8.3	The transmission problem . . . . .	339
6.9	Representation Formulae . . . . .	341
6.10	Boundary Integral Equations for Electromagnetic fields . . . . .	344
6.10.1	The Calderon projector and the capacity operators . . .	349
6.10.2	Weak solutions for a fundamental problem . . . . .	351
6.11	Application of the Electromagnetic Potentials to Eddy Cur- rent Problems . . . . .	359
6.11.1	The ' $(\mathbf{A}, \varphi) - (\mathbf{A}) - (\psi)$ ' formulation in the bounded domain . . . . .	359
6.11.2	The ' $(\mathbf{A}, \varphi) - (\psi)$ ' formulation in an unbounded domain	369

6.11.3	Electric field in the dielectric domain $\Omega_D$ . . . . .	379
6.11.4	Vector potentials — revisited . . . . .	387
6.12	Applications of boundary integral equations to scattering problems . . . . .	395
6.12.1	Scattering by a perfect electric conductor, EFIE and MFIE . . . . .	397
6.12.2	Scattering by a dielectric body . . . . .	416
6.12.3	Scattering by objects with impedance boundary conditions . . . . .	423
<b>7.</b>	<b>Introduction to Pseudodifferential Operators</b> . . . . .	<b>429</b>
7.1	Basic Theory of Pseudodifferential Operators . . . . .	429
7.2	Elliptic Pseudodifferential Operators on $\Omega \subset \mathbb{R}^n$ . . . . .	452
7.2.1	Systems of Pseudodifferential Operators . . . . .	454
7.2.2	Parametrix and Fundamental Solution . . . . .	457
7.2.3	Levi Functions for Scalar Elliptic Equations . . . . .	459
7.2.4	Levi Functions for Elliptic Systems . . . . .	466
7.2.5	Strong Ellipticity and Gårding's Inequality . . . . .	468
7.3	Review on Fundamental Solutions . . . . .	471
7.3.1	Local Fundamental Solutions . . . . .	472
7.3.2	Fundamental Solutions in $\mathbb{R}^n$ for Operators with Constant Coefficients . . . . .	474
7.3.3	Existing Fundamental Solutions in Applications . . . . .	477
<b>8.</b>	<b>Pseudodifferential Operators as Integral Operators</b> . . . . .	<b>479</b>
8.1	Pseudohomogeneous Kernels . . . . .	479
8.1.1	Integral Operators as Pseudodifferential Operators of Negative Order . . . . .	482
8.1.2	Non-Negative Order Pseudodifferential Operators as Hadamard Finite Part Integral Operators . . . . .	506
8.1.3	Parity Conditions . . . . .	515
8.1.4	A Summary of the Relations between Kernels and Symbols . . . . .	518
8.2	Coordinate Changes and Pseudohomogeneous Kernels . . . . .	520
8.2.1	The Transformation of General Hadamard Finite Part Integral Operators under Change of Coordinates . . . . .	523
8.2.2	The Class of Invariant Hadamard Finite Part Integral Operators under Change of Coordinates . . . . .	530
<b>9.</b>	<b>Pseudodifferential and Boundary Integral Operators</b> . . . . .	<b>539</b>
9.1	Pseudodifferential Operators on Boundary Manifolds . . . . .	540
9.1.1	Ellipticity on Boundary Manifolds . . . . .	544
9.1.2	Schwartz Kernels on Boundary Manifolds . . . . .	546
9.2	Boundary Operators Generated by Domain Pseudodifferential Operators . . . . .	547

9.3	Surface Potentials on the Plane $\mathbb{R}^{n-1}$ .....	549
9.4	Pseudodifferential Operators with Symbols of Rational Type .	572
9.5	Surface Potentials on the Boundary Manifold $\Gamma$ .....	593
9.6	Volume Potentials .....	602
9.7	Strong Ellipticity and Fredholm Properties .....	605
9.8	Strong Ellipticity of Boundary Problems and Integral Equations	611
9.8.1	The Boundary Value and Transmission Problems .....	611
9.8.2	The Associated Boundary Integral Equations of the First Kind .....	613
9.8.3	The Transmission Problem and Gårding's inequality ..	614
9.9	Remarks .....	617
<b>10.</b>	<b>Integral Equations on <math>\Gamma \subset \mathbb{R}^3</math> Recast as Pseudodifferential Equations</b> .....	<b>619</b>
10.1	Newton Potential Operators for Elliptic Partial Differential Equations .....	625
10.1.1	Generalized Newton Potentials for the Helmholtz Equa- tion .....	628
10.1.2	The Newton Potential for the Lamé System .....	631
10.1.3	The Newton Potential for the Stokes System .....	632
10.2	Surface Potentials for Second Order Equations .....	633
10.2.1	Strongly Elliptic Differential Equations .....	636
10.2.2	Surface Potentials for the Helmholtz Equation .....	640
10.2.3	Surface Potentials for the Lamé System .....	645
10.2.4	Surface Potentials for the Stokes System .....	650
10.3	Invariance of Boundary Pseudodifferential Operators .....	650
10.3.1	The Hypersingular Boundary Integral Operators for the Helmholtz Equation .....	651
10.3.2	The Hypersingular Operator for the Lamé System ...	657
10.3.3	The Hypersingular Operator for the Stokes System ...	661
10.4	Derivatives of Boundary Potentials .....	661
10.4.1	Derivatives of the Solution to the Helmholtz Equation	667
10.4.2	Computation of Stress and Strain on the Boundary for the Lamé System .....	669
10.5	Remarks .....	673
<b>11.</b>	<b>Boundary Integral Equations on Curves in <math>\mathbb{R}^2</math></b> .....	<b>675</b>
11.1	Fourier Series Representation of the Basic Operators .....	676
11.2	The Fourier Series Representation of Periodic Operators $A \in$ $\mathcal{L}_{cl}^m(\Gamma)$ .....	682
11.3	Ellipticity Conditions for Periodic Operators on $\Gamma$ .....	688
11.3.1	Scalar Equations .....	689
11.3.2	Systems of Equations .....	694
11.3.3	Multiply Connected Domains .....	698
11.4	Fourier Series Representation of some Particular Operators ..	701

11.4.1	The Helmholtz Equation .....	701
11.4.2	The Lamé System .....	705
11.4.3	The Stokes System .....	707
11.4.4	The Biharmonic Equation .....	709
11.5	Remarks .....	718
<b>12.</b>	<b>Remarks on Pseudodifferential Operators for Maxwell Equations</b> .....	<b>719</b>
12.1	Introduction .....	719
12.2	Symbols of $\mathbf{P}$ and the corresponding Newton potentials .....	720
12.3	Representation formulae .....	721
12.4	Symbols of the Electromagnetic Boundary Potentials .....	723
12.5	Symbols of boundary integral operators .....	729
12.6	Symbols of the Capacity Operators .....	731
12.7	Boundary Integral Operators for the Fundamental Boundary Value Problems .....	733
12.8	Coerciveness and Strong Ellipticity .....	734
12.9	Gårding's inequality for the sesquilinear form $\mathcal{A}$ in (6.12.23) ..	737
12.10	Existence Theorem 6.12.6 revisited .....	740
12.11	Concluding Remarks .....	743
<b>A.</b>	<b>Appendix A: Local Coordinates</b> .....	<b>745</b>
<b>B.</b>	<b>Appendix B: Vector Field Identities, Integration Formulae</b>	<b>751</b>
	<b>References</b> .....	<b>753</b>
	<b>Index</b> .....	<b>775</b>
