## Feature Article

<b>1. Nanoscale coordination polymers for medicine and sensors</b>	<b>3</b>
Rubén Solórzano, Salvio Suárez-García, Fernando Novio, Julia Lorenzo, Ramon Alibés, Félix Busqué, and Daniel Ruiz-Molina	
1. Introduction	4
2. Nanoscale coordination polymers for drug delivery	6
3. Nanoscale coordination polymers for chemical sensing	17
4. Perspectives	26
Acknowledgments	27
References	27
<b>2. Nanoscale coordination polymers: Preparation, function and application</b>	<b>33</b>
Ali Morsali and Lida Hashemi	
1. Introduction to coordination polymers	34
2. Introduction to nano coordination polymers (NCPs)	37
3. Effective factors in synthetic of nano coordination polymers	47
4. Application of nano coordination polymers	56
5. Conclusions and future perspectives	68
Acknowledgments	68
References	69
<b>3. The role of defects in the properties of functional coordination polymers</b>	<b>73</b>
Celia Castillo-Blas, Carmen Montoro, Ana E. Platero-Prats, Pablo Ares, Pilar Amo-Ochoa, Javier Conesa, and Félix Zamora	
1. Introduction	74
2. Low dimensional nanoscale coordination polymers	78
3. Tailoring the catalytic, adsorptive and conductive properties of metal-organic frameworks at the nanoscale	94

---

4. Conclusions and future perspectives	113
Acknowledgments	115
References	115
<b>4. Selected polyazole based coordination polymers displaying functional properties</b>	<b>121</b>
Yann Garcia	
1. Introduction	121
2. Selected coordination networks for metal capture	126
3. Spin crossover materials	132
4. Crystal network design	135
5. Sensing toxic industrial chemicals	142
6. Nanomedicine	145
7. Conclusions and future developments	147
Acknowledgments	148
References	148
<b>5. Coordination compounds with siloxane/silane-containing ligands capable of self-assembly at nano/micro scale in solid state and in solution</b>	<b>155</b>
Mirela-Fernanda Zaltariov and Maria Cazacu	
1. Coordination compounds in the "nano" context	156
2. Coordination compounds with siloxane/silane-containing ligands	159
3. Nano-sized coordination compounds of Schiff bases with siloxane spacer or silane tails	162
4. Metal complexes with siloxane-spaced or -supported polycarboxylate ligands	174
5. Conclusions and future perspectives	191
Acknowledgment	192
References	192
<b>6. Nanoscale coordination compounds</b>	<b>197</b>
Younes Hanifehpour, Babak Mirtamizdoust, and Sang Woo Joo	
1. Introduction	198
2. General comment	199
3. Conclusions and future perspectives	235
Acknowledgment	236
References	236

---

<b>7. Nano-architectonics for coordination assemblies at interfacial media</b>	<b>239</b>
Katsuhiko Ariga	
1. Introduction	240
2. General significance of research on coordination assemblies at interfacial media	243
3. Self-assembled monolayer (SAM)	244
4. Langmuir-Blodgett (LB) film	247
5. Layer-by-layer (LbL) assembly	255
6. Lipid bilayer membrane	260
7. Summary and future perspective	262
Acknowledgments	262
References	262
<b>8. Mussel inspired self-healing materials: Coordination chemistry of polyphenols</b>	<b>269</b>
Henrik Birkedal and Yaqing Chen	
1. Introduction	270
2. Catechol chemistry	271
3. Self-healing hydrogels based on polyphenols	272
4. Specific ion effects in hydrogels: Impact on gel strength and a platform for chemical gardens	291
5. Conclusions	295
Acknowledgments	296
References	296
