ELGAR STUDIES IN LEGAL RESEARCH METHODS

 **Edward Elgar**
PUBLISHING

Cheltenham, UK • Northampton, MA, USA

Contents

<i>List of contributors</i>	vii
The emergence of computational legal studies: an introduction <i>Ryan Whalen</i>	1
1 Sense and similarity: automating legal text comparison <i>Wolfgang Alschner</i>	9
2 Computational legal studies, digital humanities, and textual analysis <i>Nina Varsava</i>	29
3 Computational stylometry: predicting the authorship of investment arbitration awards <i>Malcolm Langford, Daniel Behn and Runar Lie</i>	53
4 Automated classification of modes of moral reasoning in judicial decisions <i>Nischal Mainali, Liam Meier, Elliott Ash and Daniel L. Chen</i>	77
5 On dragons, caves, teeth, and claws: legal analytics and the problem of court data access <i>Charlotte S. Alexander and Mohammad Javad Feizollahi</i>	95
6 Computational legal studies in China: progress, challenges, and future <i>Yingmao Tang and John Zhuang Liu</i>	124
7 Measuring surveillance chill and other regulatory impacts at scale <i>Jonathon W. Penney</i>	146
8 Understanding content moderation systems: new methods to understand internet governance at scale, over time, and across platforms <i>Nicolas Suzor</i>	166
9 Accounting for legal values <i>Kevin D. Ashley</i>	190

10	Is legal cognition computational? (When will DeepVehicle replace Judge Hercules?) <i>Paul Gowder</i>	215
11	Rule by rules <i>Michael A. Livermore</i>	238
12	Purposes and challenges of legal citation network analysis on case law <i>Dafne van Kuppevelt, Gijs van Dijck and Marcel Schaper</i>	265
13	Needles in a haystack: using network analysis to identify cases that are cited for general principles of law by the European Court of Human Rights <i>Henrik Palmer Olsen and Magnus Esmark</i>	293
14	Agent-based modeling for legal studies <i>Alex Schwartz</i>	312
15	Analyzing high volumes of German court decisions in an interdisciplinary class of law and computer science students <i>Janis Beckedorf, Dirk Hartung and Phillip Sittig</i>	328
	<i>Index</i>	345
