

Contents

| | |
|---|-----------|
| Introduction | 1 |
| 1. Some Elementary Methods | 5 |
| The Linear Equation of the First Order The Equation with Separable Variables Exact Differential Equations The Uniqueness Problem: An Example Some Integral Inequalities Problems | |
| 2. Existence Theory for Differential Equations | 19 |
| The First-Order Equation First-Order Differential Systems Equations and Systems of Higher Order Peano Existence Theorem A Uniqueness Theorem Problems | |
| 3. Some Global Problems for Ordinary Differential Equations | 39 |
| Statement of the Problems Global Uniqueness Global Existence and the Behavior of Saturated Solutions Dependence of Solutions on Initial Values Differential Inequalities and the Comparison Method A Criterion of Global Existence Problems | |

| | |
|---|------------|
| 4. Some Special Classes of Differential Systems and Equations | 57 |
| Linear Systems: Generalities Linear Homogeneous Systems Nonhomogeneous Systems Linear Equations of Higher Order Autonomous Systems Linear Systems and Equations with Constant Coefficients Problems | |
| 5. Stability Theory of Ordinary Differential Systems | 85 |
| Definitions and Examples Stability of Linear Systems Stability in the First Approximation Stability Theorems by Comparison Method Further Stability Results Stability of Automatic Control Systems Problems | |
| 6. Volterra Integral Equations | 119 |
| Existence and Uniqueness of Solution An Existence Theorem The Linear Equation The First-Kind Linear Equation Some Problems on the Half-Axis Problems | |
| 7. Fredholm Theory of Linear Integral Equations | 133 |
| The Resolvent Kernel The Entire Functions of Fredholm and Their Applications A Glimpse of Hilbert Space Theory Eigenvalues, Eigenfunctions and Adjoint Equations Problems | |
| 8. Theory of Self-Adjoint Integral Equations and Some Applications | 155 |
| Some Properties of an Integral Operator The Existence of Eigenvalues The Hilbert–Schmidt Expansion Theorem Complete Kernels and Systems The Sturm–Liouville Problem Reduction to an Integral Equation: The First Case Reduction to an Integral Equation: The Second Case Problems | |
| 9. Miscellanea (Nice Things) | 173 |
| Maximum and Minimum Solutions of Scalar Differential Equations A Theorem of Massera An Oscillation Theorem A Formula of Picone and Its Consequences Liénard’s Equation Differential Systems Without Uniqueness Abel’s Integral Equation | |
