On the Density Problem in the Parabolic Space

Andrea Merlo
Mihalis Mourgoglou
Carmelo Puliatti

April 2026 • Volume 320 • Number 1630 (fourth of 7 numbers)

Contents

Chapter 1. Introduction	1
Structure of the paper	10
Chapter 2. Preliminaries and notation	11
2.1. The parabolic group $\mathbb{P}^n$	11
2.2. Hausdorff and surface measures	12
2.3. Planes, Grassmannians, and flat measures	12
2.4. Measures with density and their blowups	14
2.5. Basic properties of uniform measures in $\mathbb{P}^n$	16
2.6. Parabolic rectifiability	17
Chapter 3. Marstrand's theorem and the structure of uniform measures	21
3.1. Blowups of 1-codimensional uniform measures	23
Chapter 4. Marstrand-Mattila rectifiability criterion	27
Chapter 5. Moments and their expansion	43
5.1. Expansion formulas for moments	45
5.2. Construction of the candidate quadric containing the support	46
Chapter 6. Uniform measures of dimension $n + 1$ and quadratic surfaces	51
Chapter 7. Structure of non-degenerated uniform measures	55
7.1. Uniform measures with $\tau \neq 0$ do not exist	55
7.2. Structure of uniform measures with $\tau = 0$	58
Chapter 8. Proof of 1-codimensional Preiss's theorem	63
Chapter 9. Weak constant density implies bilateral weak geometric lemma	67
Appendix A. Proof of Theorem 1.2	81
Appendix B. Taylor expansion of area on quadratic t -cones	83
Bibliography	93
